SECTION ONE
REPORT BASIS AND SUMMARY
INFORMATION

ANNUAL ENFORCEMENT AND COMPLIANCE REPORT FISCAL YEAR 2016

Statutory Authority and Scope

Environment Article §1-301(d), enacted in 1997 (see Appendix C for full text), requires the Maryland Department of the Environment (MDE) to report annual performance results for specific regulatory programs and the penalty dollars collected and deposited into several funds. This report is intended to fulfill that statutory requirement. In addition to the required information, this report also includes MDE's other enforcement programs, additional information about each program, and additional data about the activities and facilities that are subject to regulation under the Environment Article.

Organization of the Report

Section One includes an overall, Department-wide summary of the FY 2016 results. A table on pages eight through ten compares the historical annual Department-wide performance measures from FY 1998 – 2016. Two graphs on page 11 also illustrate trends for enforcement actions and penalties obtained for these years.

Section Two presents program-specific information concerning enforcement and compliance activities for the reported programs. Related materials appear as appendices in Section Three.

Inclusion of any facility on the cover is not an indication of its compliance status nor does it indicate that the facility is referenced in the report.

EXECUTIVE SUMMARY

The Maryland Department of the Environment's (MDE's) 20th Enforcement and Compliance Report, for Fiscal Year 2016 (July 2015-June 2016) reports data from MDE's enforcement and compliance programs and from the Environmental Crimes Unit of the Office of the Attorney General. This document has been prepared in accordance with the requirements of §1-301(d) of the Environment Article.

During FY 2016, MDE provided regulatory oversight for 179,779 regulated entities, with 67,438 permits in effect in 33 different enforcement areas. The number of permits in effect declined by 1,650, largely due to efforts to remove completed projects from the Erosion and Sediment Control section's data. The number of other regulated facilities increased by more than 9,000, largely due to the expansion of the rental property registration requirements, which support MDE's lead poisoning prevention efforts, to properties built prior to 1978.

MDE inspected 70,545 sites, which is 32% fewer sites in FY 2016 than in FY 2015, and performed over 148,000 inspections, audits, and spot checks, which is a 19% decrease from FY 2015. However, all of this decrease is due to changes in the number of third-party inspections in the Lead Poisoning Prevention Program. These inspections vary widely from year to year, often because of changes in the rental housing market that affect the number of turnovers and other events that trigger the inspection requirements. When removing the decrease in third-party inspections in the Lead Poisoning Prevention Program, MDE's number of inspected sites for all other categories increased by 3% during FY16, and the number of inspections, audits, and spot checks is consistent with last year's numbers.

There was a large increase in the number of enforcement actions this year due to an enforcement initiative for property owners who failed to renew rental registrations for the lead rental registry. This initiative assists with the Department's ongoing efforts to reduce and eradicate childhood lead poisoning. As a result there were more than 12,000 lead-related enforcement actions in FY 2016, which is greater than the total number of enforcement actions from the rest of the Department.

This year, penalties collected from environmental violators totaled \$3,735,405. This is a slight increase from last year's total of \$3,681,138. These are amounts collected by the Department. Large changes in penalties collected often reflect the presence or absence of large settlements during the year. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

MDE has continued to prioritize enforcement activities based on risks to public health and the environment. Please refer to MDE's website (<http://www.mde.maryland.gov>) for the latest information on enforcement actions and other compliance activities.

MDE PERFORMANCE MEASURES EXECUTIVE SUMMARY

	<u>2015 Totals</u>	<u>2016 Totals</u>
<u>PERMITTED SITES/FACILITIES</u>		
Number of Permits/Licenses Issued	10,332	8,784
Number of Permits/Licenses in Effect at Fiscal Year End	69,088	67,438
<u>OTHER REGULATED SITES/FACILITIES</u>		
Total Sites	169,094	179,779
<u>INSPECTIONS</u>		
Number of Sites Inspected	104,454	70,545
Number of Sites Audited But Not Inspected	8,465	6,466
Number of Inspections, Audits, Spot Checks	183,192	148,756
<u>ENFORCEMENT ACTIONS</u>		
Number of Compliance Assistance Rendered	16,762	17,069
Number of Enforcement Actions Taken	7,676	14,829
<u>PENALTIES</u>		
Amount of Administrative or Civil Penalties Obtained*	\$3,681,138	\$3,735,405
Supplemental Environmental Projects	8 (\$3,594,000)	6 (\$2,322,000)

* This reflects the amount collected in the fiscal year, not the penalties assessed. Collection of penalties sometimes takes place in a fiscal year after the violation is resolved. Large settlements can take longer to negotiate and collect than smaller amounts.

ENFORCEMENT WORKFORCE

	Compensation*		Workforce			
			Inspectors**		FTE Vacancies***	
	FY 2015	FY 2016	FY 2015	FY 2016	FY 2015	FY 2016
Air/Radiation	\$3,475,266	\$3,397,563	41.0	39.0	2.42	2.60
Land	\$5,076,486	\$5,396,387	73.0	72.0	9.8	6.92
Water	\$3,603,557	\$3,885,912	42.6	41.21	8.9	13.89
Total	\$12,155,309	\$12,679,862	156.6	152.21	21.12	23.41

* "Compensation" includes wages plus fringe benefits. The numbers do not include any operating expenses such as vehicles, travel, gasoline, supplies, or other related employment expenses.

** "Inspectors" represent the number of enforcement field inspectors budgeted for the fiscal year. These numbers do not include any administrative, management, or clerical staff associated with enforcement and compliance programs. This table represents total budgeted positions, not the actual number of inspectors currently on staff.

*** "FTE (full-time equivalent) vacancies" represent the number of full-time-equivalent positions that were vacant during the fiscal year.

SECTION 1-301(d) PENALTY SUMMARY

TOTAL AMOUNT OF MONEY DEPOSITED AS A RESULT OF ENFORCEMENT ACTIONS AS REQUIRED BY SECTION 1-301(d)*	FY 2015	FY 2016
Clean Air Fund (includes Air Quality and Asbestos)	\$273,833	\$132,660
Clean Water Fund (includes Water and Land Management)	\$1,713,925	\$1,278,422
Hazardous Substance Control Fund	\$49,900	\$16,550
Nontidal Wetland Compensation Fund	\$11,375	\$45,000
Oil Disaster Containment Clean Up and Contingency Fund	\$488,475	\$150,357
Recovered from Responsible Parties (under §7-221)**	\$151,802	\$255,144
Sewage Sludge Utilization Fund (This fund is now included in the Clean Water Fund)	\$0	\$0

* Includes only those funds required to be reported by the Environment Article, Section 1-301(d). Other penalties are reported by individual programs that total a higher amount since they are deposited into funds not required to be reported by 1-301(d). The Department total is \$3,735,405.

** The number reported is strictly the total amount of money, as a result of enforcement, recovered by the Department from responsible parties in accordance with §7-221 of the Environment Article as called for in the statute.

Please note this table reflects penalties collected during the fiscal year, not penalties assessed.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 1998 - 2003

MDE Performance Measure	1998	1999	2000	2001	2002	2003
PERMITTED SITES/FACILITIES						
Number of Permits/Licenses Issued	8,972	8,350	9,710	9,573	9,671	11,988
Number of Permits/Licenses in Effect at Fiscal Year End	54,668	56,024	57,253	62,679	62,882	69,831
OTHER REGULATED SITES/FACILITIES						
Other Sites	89,863	95,892	100,244	105,085	191,177	197,529
INSPECTIONS *						
Number of Sites Inspected	31,026	30,352	28,626	39,050	37,850	33,048
Number of Inspections, Audits, Spot Checks	81,372	83,899	90,488	103,782	108,043	98,550
ENFORCEMENT ACTIONS						
Number of Compliance Assistance Actions Rendered	15,837	14,709	15,831	15,032	16,523	14,120
Number of Enforcement Actions Taken	1,134	1,391	977	1,542	1,541	2,311
PENALTIES						
Amount of Penalties Obtained (\$)**	1,145,731	1,206,629	2,093,526	1,334,499	1,523,890	2,321,563

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 2004 - 2009

MDE Performance Measure	2004	2005	2006	2007	2008	2009
PERMITTED SITES/FACILITIES						
Number of Permits/Licenses Issued	11,264	10,799	10,737	10,455	11,463	10,043
Number of Permits/Licenses in Effect at Fiscal Year End	75,729	73,155	77,721	77,041	100,206	92,960
OTHER REGULATED SITES/FACILITIES						
Other Sites	204,873	222,673	239,612	253,715	257,744	117,421
INSPECTIONS *						
Number of Sites Inspected	43,434	43,722	55,294	47,723	44,161	44,587
Number of Inspections, Audits, Spot Checks	106,845	103,586	115,977	107,496	122,389	122,079
ENFORCEMENT ACTIONS						
Number of Compliance Assistance Actions Rendered	18,646	10,953	11,067	10,158	11,443	14,412
Number of Enforcement Actions Taken	1,856	1,395	1,946	2,004**	2,704**	2,901
PENALTIES						
Amount of Penalties Obtained (\$)***	1,781,526	1,631,054	2,803,685	2,248,131	3,970,275	6,516,601

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** These two numbers were corrected; they were previously reported as 2,011 and 2,699 respectively.

*** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE PERFORMANCE MEASURES ANNUAL SUMMARY

FY 2010 - 2016

MDE Performance Measure	2010	2011	2012	2013	2014	2015	2016
PERMITTED SITES/FACILITIES							
Number of Permits/Licenses Issued	8,982	9,089	8,369	8,405	8,708	10,332	8,784
Number of Permits/Licenses in Effect at Fiscal Year End	93,323	92,195	92,271	92,537	78,588	69,088	67,438
OTHER REGULATED SITES/FACILITIES							
Other Sites	158,112	158,058	158,161	160,223	160,332	169,094	179,779
INSPECTIONS *							
Number of Sites Inspected	45,332	52,561	43,448	39,458	42,414	104,454	70,545
Number of Inspections, Audits, Spot Checks	124,045	129,213	122,046	118,836	126,337	183,192	148,756
ENFORCEMENT ACTIONS							
Number of Compliance Assistance Actions Rendered	21,352	21,323	21,121	18,200	20,536	16,762	17,069
Number of Enforcement Actions Taken	3,099	2,564	2,655	2,280	2,151	7,676	14,829
PENALTIES							
Amount of Penalties Obtained (\$)**	5,099,340	3,486,141	3,622,330	5,878,392	3,620,272	3,681,138	3,735,405

* Inspections:

Number of Sites Inspected: The number of individual sites physically visited and inspected for compliance.

Number of Inspections, Audits, Spot Checks: The total numbers of sites evaluated for compliance, including on-site inspections, record reviews, audits, and spot-check activities.

Each individual site can be inspected by several programs or by one program more than once, so the former is always less than the latter.

** Amount of Penalties Obtained: The total dollar amount of penalty revenue collected during the fiscal year. Note that penalties can be collected in the fiscal year after the violation for which they are assessed. This table reflects the amount of revenue obtained ("collected") in the fiscal year as a result of all enforcement actions regardless of the fund into which they are deposited.

MDE Enforcement Actions Taken 1998-2016

MDE Penalty Amounts (\$) Collected 1998-2016

MDE'S ENFORCEMENT AND COMPLIANCE PROCESS and SERVICES TO PERMITTEES AND BUSINESSES

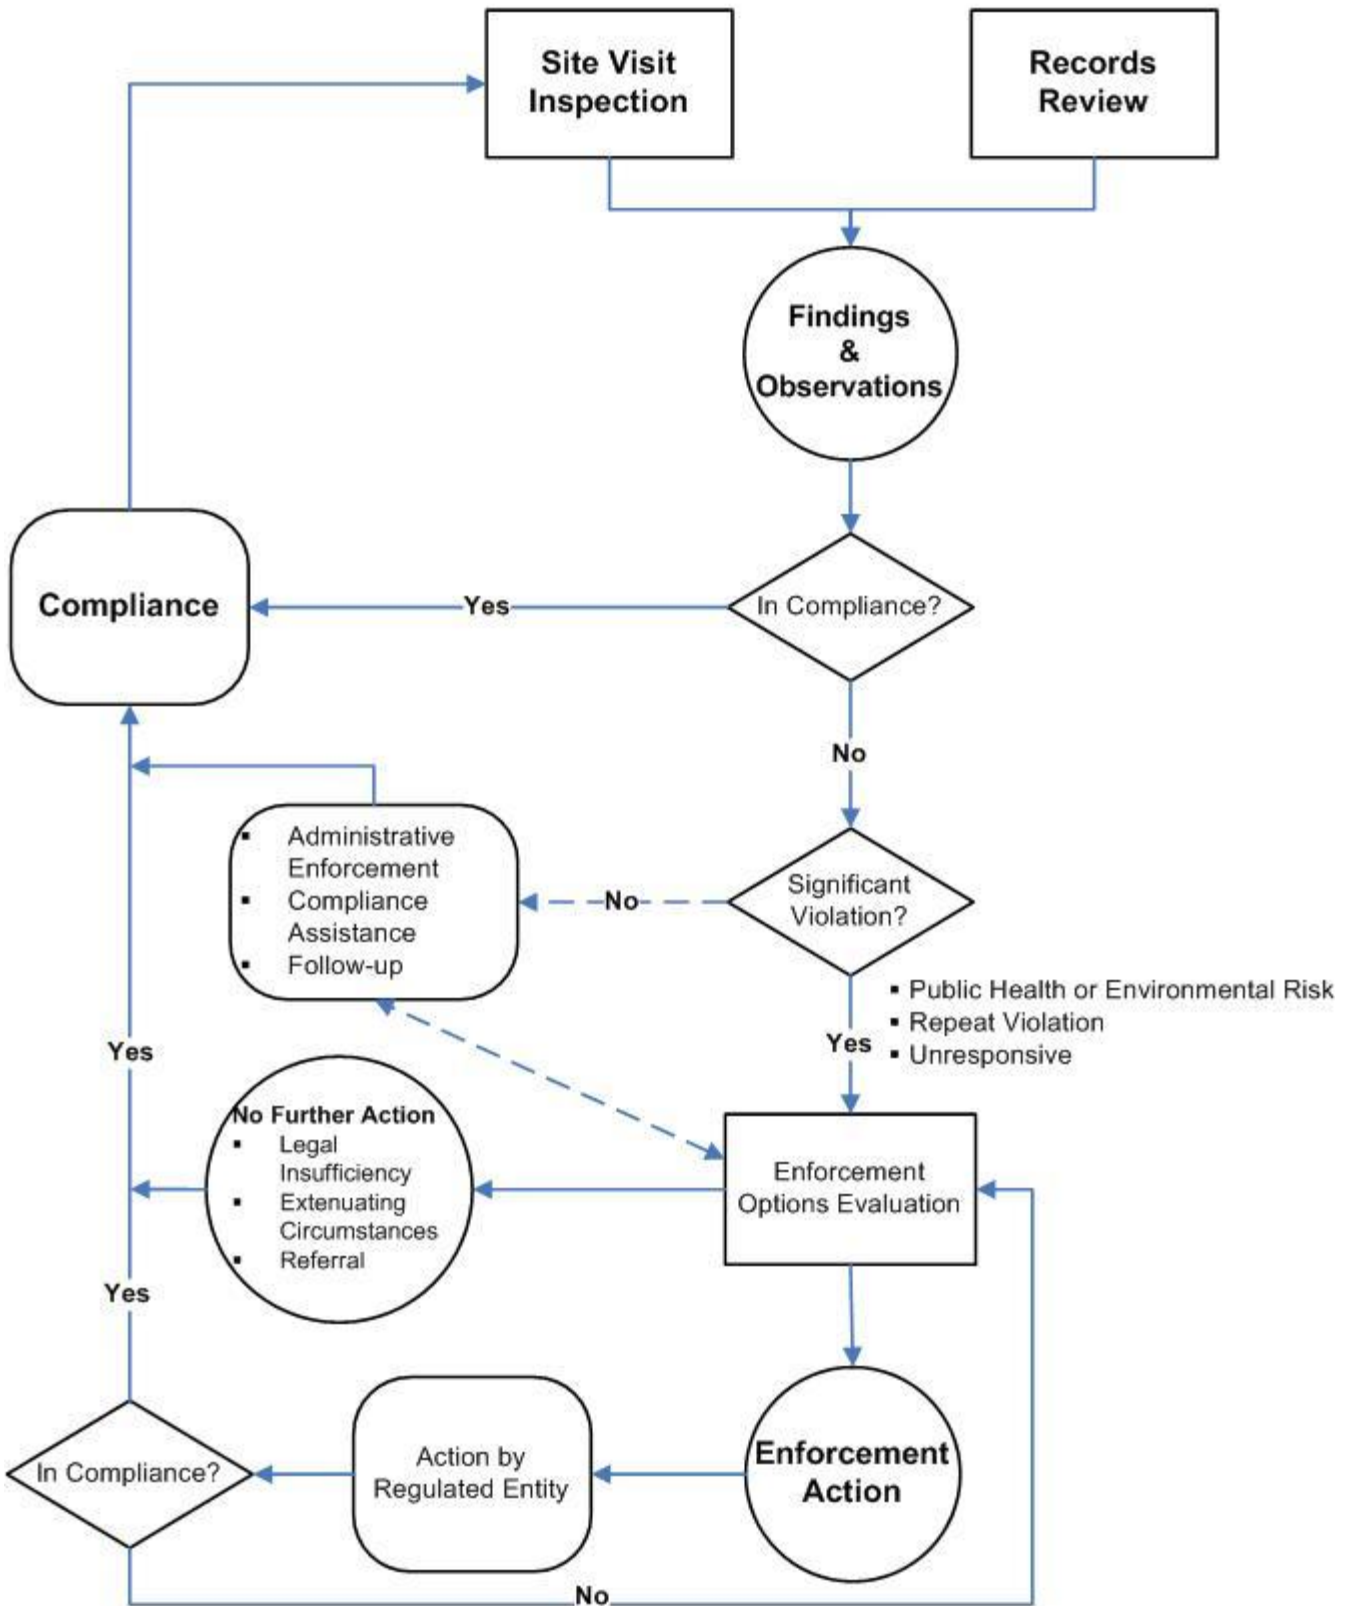

The Enforcement and Compliance Process

The enforcement and compliance processes used by MDE's air, water, and land administrations are authorized in different parts of the Environment Article and were established separately over a period of years. As a result, similar terminology may have technically different meanings for different programs. Despite technical differences, most enforcement programs share certain common functions that allow a year-to-year comparison. Most programs have inspection, monitoring, evaluation, and enforcement components.

Many programs also implement federal rules and regulations in addition to State requirements. In addition, the same individual, company, or facility may fall under the jurisdiction of several different environmental enforcement programs at the federal, state or local level.

If a minor violation such as a record-keeping or reporting error is discovered, a program may use discretion to allow the violator to correct the problem without imposing a penalty. In such cases, compliance assistance may be the most efficient method to achieve compliance with such requirements. Compliance assistance is a process that does not involve the use of a formal enforcement action and is explained in more detail on page 15. If an inspection reveals a significant violation, or if minor violations continue to recur and become a significant problem, then more enhanced actions are warranted. Such action may take the form of penalties, corrective orders, the filing of injunctions, and in some cases, criminal sanctions.

MDE ENFORCEMENT PROCESS

Supplemental Environmental Projects (SEPs)

MDE's approach to enforcement includes the use of Supplemental Environmental Projects (SEPs). SEPs are projects specifically undertaken to improve the environment by parties who are subject to penalty actions. Under certain limited circumstances, the value of the SEP is allowed by MDE to offset a portion of the penalty.

The federal Environmental Protection Agency encourages the use of SEPs for several reasons. First, SEPs add value to enforcement settlements because SEP dollars are spent directly on environmental projects. Second, SEPs require violators to go above and beyond technical compliance with minimum legal standards and thereby reach a higher level of environmental stewardship. Finally, and probably most importantly, SEPs are intended to achieve improvements to the environment that could not be accomplished with traditional penalties. Traditional penalties serve to punish current violations and deter future violations. SEPs accomplish those traditional purposes and provide a form of community service that improves the environment where the violation occurred.

MDE entered into six SEPs during FY 2016 with a total value of \$2,322,000. These SEPs were in the Air and Radiation Management Administration, the Land Management Administration, and the Water Management Administration. The SEPs involved the replacement of lead-contaminated windows, electric vehicle infrastructure, producing a water quality-related conference, and other water quality projects.

Administration	Number of SEPs		Total Value of SEPs	
	2015	2016	2015	2016
Air and Radiation Management Administration	1	0	\$75,000	\$0
Land Management Administration	5	3	\$104,000	\$964,000
Water Management Administration	2	3	\$3,415,000	\$1,358,000
TOTALS	8	6	\$3,594,000	\$2,322,000

Details about these SEPs can be found in Appendix F.

Contacts or Consultations with Businesses

Environment Article section 1-301(d) requires this report to “*include information on the type and number of contacts or consultations with businesses concerning compliance with State environmental laws.*” This section identifies the two types of contacts MDE has with businesses to help them come into compliance: compliance assistance and other consultations.

Compliance Assistance

One specific form of contact between businesses and MDE’s enforcement and compliance inspectors is counted in the programs’ performance measures tables under the category of “*compliance assistance.*” As an element of MDE’s enforcement process, an inspector renders a tangible act of compliance assistance when the inspector:

- (a) Documents a specific past or current violation which the regulated entity corrects in the absence of a formal enforcement action; or
- (b) Documents a specific action or actions which the regulated entity has the option of undertaking to prevent the likelihood of potential future violations. The action or actions are voluntarily undertaken by the regulated entity in such manner and within such time period as deemed acceptable by MDE in the absence of a formal enforcement action.

For either (a) or (b), the MDE inspector must document the manner in which the regulated entity voluntarily achieved compliance. This definition of “compliance assistance” requires the action to be measurable, and objectively verifiable by a third party. This documents MDE’s activities to keep facilities in compliance without the use of formal enforcement actions.

Consultations with Businesses

MDE provides other forms of compliance information to businesses and other regulated entities. These include making guidance documents available, providing forms, and publishing information about new or updated requirements on MDE’s website. MDE also works with businesses before they apply for permits to explain what permits will be required for a proposed activity and the application process for the required permits. Possible compliance requirements such as sampling, reporting, and record-keeping may also be explained. The Water Management Administration documented more than 350 pre-application meetings: 88 in nontidal wetlands and waterways, 177 in tidal wetlands, and 106 in dam safety.

The Department’s website (<http://www.mde.maryland.gov>) provides additional information that businesses may use to determine compliance with environmental requirements:

- The Guide to Environmental Permits and Approvals provides detailed information about each of MDE’s permit programs.
- MDE has made a number of permit applications and instructions for completion available online. MDE is also working to enable businesses to submit their permit applications via the Internet.

- MDE has created an Enforcement Webpage where information can be found concerning enforcement programs and current enforcement actions:
<http://www.mde.maryland.gov/AboutMDE/DepartmentalReports/Pages/AboutMDE/enfcomp.aspx>

SECTION TWO
ADMINISTRATION DETAILS

MEASURING ENFORCEMENT AND COMPLIANCE

MDE has been measuring, in a consistent fashion, the performance of its enforcement and compliance activities since 1998. This report standardizes the accomplishments of enforcement and compliance programs using metrics for the 31 enforcement areas that are the subject of this report.

Enforcement actions are taken by MDE's three media administrations:

- Air:** Includes air pollution and radiation programs.
- Land:** Includes oil control, solid and hazardous waste management, sewage sludge utilization, animal feeding operations, scrap tire recycling, lead poisoning prevention, natural wood waste recycling, coal and mineral mining, oil and gas exploration and production, and hazardous substance clean-up programs.
- Water:** Includes drinking water, tidal and non-tidal wetlands, wastewater discharges, water appropriation, waterway and floodplain construction, dam safety, stormwater management and sediment and erosion control programs.

Organization of Section Two

Section Two is divided by administration and by enforcement area/program. First, an overall administration executive summary describes the enforcement and compliance efforts during this fiscal year, followed by key performance measures for that administration. Next, the sections for each enforcement area/program include the purpose of the program, its underlying authority, its enforcement process, summary of the program's successes/challenges, the performance measures table, and three charts comparing the past three fiscal years' data on inspection coverage; number of inspections, audits, and spot checks; and number of enforcement actions.

SAMPLE PERFORMANCE MEASURES TABLE

This key table presents an accounting of each program's activity. Definitions of each measure appear below. An example of the table with the lines numbered to correspond to the following definitions follows this list of definitions.

1. *Permitted Sites/Facilities and Other Regulated Sites/Facilities: Measures of the MDE or Program workload.*

Lines 2, 3, and 5-8: Identify the total universe of facilities over which the program has regulatory responsibility.

Line 2: Shows the number of new permits or permit renewals issued during the year.

Line 3: Shows the total number of permits that were in effect at fiscal year end.

Lines 5-8: Used by those programs that have regulatory responsibility for sites, facilities, and other entities that are not required to obtain a formal permit, but still fall under MDE's regulatory oversight.

9. *Inspections and Audits: A measure of output.*

Lines 10-12: Present numbers of sites evaluated for compliance. Inspections are defined as physical visits to the site to determine compliance, whether the visit involves walking around the site or a record review at the site. An audit is a review of records or self-monitoring reports performed off-site at MDE offices. These measures are reported separately to illustrate that many important regulatory oversight activities occur off-site.

Lines 13-15: Present numbers of inspections, audits and spot checks performed. The number of inspections is often substantially higher than the number of sites (comparing lines 12 and 15) because some sites are inspected more than one time during the year, depending on the degree of risk that the regulated entity poses to the public. Also, some individual sites are sufficiently large or diverse to warrant having different portions of the site, or different pieces of equipment, inspected separately.

16. *Compliance Profile: A measure of the results accomplished.*

Lines 17-19: A snapshot of the overall compliance status of the facilities inspected during the fiscal year.

Line 17: Identifies how many of the inspected sites were found with significant violations, providing a key element used to determine the inspection compliance rate (percentage) shown on line 18. If a site was found to have a significant violation, it was counted as being out of compliance, even if the site was brought back into compliance later in the year.

Line 18: The percentage of inspected sites with significant violations. Line 17 divided by Line 10 times 100.

Line 19: The enforcement “inspection coverage rate” measure. The “inspection coverage rate” is defined as the ratio of sites inspected divided by the total number of sites or regulated entities in that program’s universe. “Sites” may include other than a single physical location since many programs have regulatory oversight responsibility for things other than facilities.

20. Significant Violations: A measure of what was found.

Lines 21 – 24: Record the total number and nature of the significant violations the program identified during the fiscal year. The specific definition of what constitutes a **significant** violation is determined by individual programs that have unique statutory and regulatory threshold requirements. MDE’s general definition of a significant violation is any violation that requires MDE to take some form of remedial or enforcement action to bring the facility into compliance. MDE’s Penalty Policy further clarifies this definition and can be found in Appendix E.

Line 21: Indicates how many significant violations resulted in an environmental or health impact.

Line 22: Counts how many significant violations were technical/preventative in nature. The distinction here is based on evidence or proof that MDE must present to establish the violation in a contested case.

- Cases that include evidence of actual physical damage to the environment or to a human being, such as samples, photographs, or direct observations, are counted as having an environmental or health impact.
- Cases in which documentary evidence, such as falsified discharge monitoring reports, lack of permits or failure to maintain records, are counted as technical/preventative on line 22.
- The distinction between physical and technical violations is made to avoid the misperception that all violations involve pollution or immediately endanger human health.
- Either environmental/health violations or technical/preventative violations can be considered significant or non-significant depending on the circumstances of the violations.

Line 23: Accounts for the number of significant violations carried over from last year.

Line 24: The sum of lines 21 through 23, the total number of significant violations the program attempted to resolve during the fiscal year.

25. Disposition of Significant Violations: What is the status?

Lines 26 and 27: Answer the question of how many enforcement responses were concluded for significant violations in the fiscal year and how many are going to be carried over to next year.

- Resolved means that (1) an enforcement action or compliance assistance has been taken, and (2) the violator either has completed any required corrective action or has an executed agreement to take the corrective action and has begun bringing the site back into compliance.
- An ongoing enforcement response is one that is still in process and the site or violator has not taken adequate steps to correct the violation. Cases remain ongoing if the violator does not respond to MDE's initial violation notification; hearings have been scheduled and not yet held; or the hearing is complete and the violator has chosen to appeal the order. "Ongoing" enforcement responses are those not yet finished.

28. Enforcement Actions and Penalties: What are the tools MDE uses to bring about compliance?

Lines 29 – 36: MDE has a number of different enforcement tools that can be used to achieve compliance.

Line 29: Captures how often the program used **compliance assistance**.

- Compliance assistance is rendered when written documentation states that the correction has been made or commenced. This number does not necessarily correspond to the number of significant violations found because potential problems, which have not yet become violations, when corrected and documented, are counted as compliance assistance.
- Using compliance assistance allows MDE to bring facilities into compliance without the necessity of resorting to formal enforcement actions. It is often implemented in less time and may reduce the environmental consequences of the violation.

Lines 30 through 32: Cover specific types of enforcement actions required to be reported under Environment Article Section 1-301(d). These are broken down into administrative and civil/judicial.

Line 33: The number of penalty actions and other enforcement actions not specifically designated above. These actions are primarily penalty actions, but they also include various forms of remedial requirements that do not fit the descriptions of the actions named in the statute.

Line 34: How often the program referred a matter to the Environmental Crimes Unit of the Attorney General's Office for possible criminal prosecution. These referrals are not counted as resolved until there is a completed criminal case or the Crimes Unit has declined to take a criminal action, returned the case to the program and the program has taken an alternative form of enforcement.

Line 36: The amount of administrative or civil penalties obtained, monies collected during the fiscal year. The penalties recorded may have been imposed in prior years, but are collected in whole or in part during the reporting year.

**AIR AND RADIATION MANAGEMENT
ADMINISTRATION**

Air and Radiation Management Administration

Executive Summary

The Air and Radiation Management Administration (ARMA) conducts enforcement and compliance activities in three programmatic areas: air quality, asbestos, and radiation.

The Air Quality Compliance Program devotes a significant portion of its capacity to ensuring compliance at approximately 600 high-impact sources. This category includes facilities such as power plants, incinerators, and large industrial operations. In addition to on-site inspections, the Program reviews report submittals, stack test results, sampling results, and continuous monitoring summaries to assess compliance at regulated facilities.

The low-impact facilities category is one in which only a small percentage of sources are inspected. This is due to the large numbers of these sources and the relatively low impact of any particular violation. This category includes sources such as paint spray booths, dry cleaners, emergency generators, and gas stations.

The Air Quality Compliance Program received over 400 air quality complaints in FY 2016. The Program responds to all complaints by telephone and, based on the nature of the complaint, identifies and places priority on those that require a field inspection. Some complaint situations may need multiple follow-up inspections to address the concerns of the complainants and to ensure compliance with air quality requirements.

In the Asbestos Division, contractors intending to abate asbestos are required to notify MDE. MDE inspects as many of these projects as possible, generally focusing on the more substantial projects. Some demolition projects are also inspected. The number of asbestos notifications received in FY 2016 was 2,975. The Division has been challenged by the implementation of new testing requirements for asbestos workers which has reduced the number of inspections performed.

The Radiological Health Program (RHP) regulates both electronic sources of radiation and materials that are radioactive to prevent the general public from receiving any unnecessary exposure to radiation. Also, RHP is the primary State responder to public hazards involving radioactive materials, such as transportation incidents or a nuclear utility accident.

The Radiation Machines Division continues to implement the requirement for x-ray machine owners to conduct maintenance on a prescribed regular basis. X-ray machine owners are required to submit the maintenance reports to the Division where they are reviewed for possible compliance issues.

The Radioactive Materials Licensing and Compliance Division continues to maintain focus on implementing, through the licensing and inspection process, increased security controls for those licensees with sufficient quantities and types of radioactive materials that, if stolen, would pose a national threat. Other priorities include the evaluation of the radiation safety and engineering aspects of a sealed source medical device prior to allowing its use and sale across the nation, training of state and local personnel to assure statewide

preparedness for a nuclear utility accident, and assistance in statewide implementation of a preventive radiological nuclear detection system.

Ambient Air Quality Control

PURPOSE

There are approximately 12,000 stationary sources of air emissions registered in Maryland. The Air Quality Compliance Program is responsible for ensuring that these sources comply with applicable air pollution control requirements. Approximately 200 of these sources emit more than 95% of all the pollutants emitted from stationary sources. These 200 high-emitting sources and an additional 400 or so priority sources receive a high level of scrutiny. The additional priority sources are selected due to concerns regarding potential emissions, toxic air pollutant emissions, potential for nuisance impact, impact on the general welfare, or the potential for significant risk to public health or the environment. This group of approximately 600 sources includes facilities such as power plants, large industrial operations, manufacturing plants, asphalt plants, and incinerators. This group varies slightly in number from year to year due to start-up of new sources, shut-down of existing sources, or sources reducing emissions or using less toxic materials to the point where they are no longer considered priority sources and thus do not demand close scrutiny. The remainder of the 12,000 sources are generally smaller in terms of their emissions or their impacts and are considered to be of lesser risk to public health or the environment. Examples of these smaller sources include dry cleaning operations, gas stations, charbroilers, small boilers, paint spray booths, and degreasing machines. For this reason, performance measures information is presented in two categories, *High-Impact Air Emission Facilities* and *Low-Impact Air Emission Facilities*.

AUTHORITY

FEDERAL: Clean Air Act, Title I, Section 110

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

In inspecting facilities, a major focus is given to those approximately 600 sources described above that are considered a potential significant risk to public health or the environment. Often, multiple inspections are performed at these sources over the course of a year. Inspections are both announced and unannounced, depending on the nature and purpose of the inspection. Attention is given to smaller, lower-risk sources through special initiatives that may focus on inspecting all sources within a particular source category, spot checks of a percentage of sources in a category where the category contains a large number of small sources, and the education of trade groups and equipment operators and owners.

SUCCESSES/CHALLENGES

Ensuring compliance at high-impact sources continues to consume a large portion of the Air Quality Compliance Program's resources, and this focused attention contributes to the high compliance rate for this category. In addition to on-site inspections, the Program reviews compliance certifications, report submittals, stack test results, sampling results, and continuous monitoring summaries to assess compliance at regulated facilities. Challenges include keeping up with the growing list of air quality requirements at these large facilities with existing staff. Success has been achieved by identifying non-compliant facilities and ensuring a return to compliance.

Ambient Air Quality Control Low-Impact Facilities

Air Quality Complaints

PURPOSE

In addition to the almost 12,000 registered or permitted sources of air emissions in Maryland, there are numerous potential sources of air pollution that are not required to be registered or permitted by the Department. Examples include some composting operations, construction sites, open burning activities, hot-tar roofing operations, material storage piles, welding and burning activities, and certain portable operations of short duration. These sites or activities can create nuisance conditions such as odors or fugitive dust. The Air Quality Compliance Program responds to complaints regarding nuisance odors and dust from both permitted and non-permitted operations. After investigation, some complaints reveal no basis for potential harm to the environment or public health, but will be addressed to reduce nuisance conditions to neighbors or communities.

AUTHORITY

STATE: Environment Article, Title 2; COMAR 26.11

PROCESS

Complaints are addressed in a number of ways depending on the nature of the complaint. A complaint situation may be of sufficient severity to warrant an immediate site visit. Complaints arising from severe nuisance situations generally result in the Department receiving multiple and separate complaints for a single situation. A complaint situation can also be a sporadic occurrence, which may lead to increased surveillance of a site in an attempt to verify the existence of a problem, which may lead to a formal inspection. Some complaints, particularly where only an explanation of what is allowed is needed, can be resolved through phone contact or letters.

If the complaint investigation reveals a violation at a permitted site, the violation and subsequent enforcement action is counted under the ambient air quality control program's performance measures chart. Only those violations that occur at non-permitted sites are counted here; most violations in this category are related to open burning activities or the creation of off-site nuisances caused by odors or dust from sites. Violations such as these rarely result in actual harm, but have the potential to cause harm to the environment or public health, and on this basis are included in this report. Nearly all violations in this program are resolved without the need to take enforcement action, as they generally relate to short-lived activities, are quickly corrected (often at the time of inspection), do not reoccur, and result in no actual harm to public health or the environment.

SUCSESSES /CHALLENGES

The Air Quality Compliance Program received over 400 complaints in FY 2016. The Program responds to all complaints by telephone, prioritizing those that merit a field inspection. Some complaint situations need multiple follow-up inspections to ensure compliance with air quality requirements. Based on their nature, some complaints at non-permitted sites may need follow-up enforcement action to achieve compliance.

Many complaints are successfully resolved by the Program leading to improved quality of life for Maryland citizens. However some complaint situations can be challenging due to the sporadic nature of the problem, leading to difficulty in verifying the source or the magnitude of the problem.

*This line includes responses to complaints at permitted sites and unregistered/unpermitted sites and is used to calculate the coverage rate for complaints. The inspections and any enforcement actions at any permitted sites are captured in the sections for registered sources.

Air Quality Complaints

Asbestos

PURPOSE

The Air Quality Compliance Program's Asbestos Division manages the licensing of asbestos removal contractors and oversees their efforts when removing or encapsulating asbestos to ensure that asbestos is handled in a manner that is protective of human health. Any project that involves demolition or the removal of more than 240 linear feet or more than 160 square feet of asbestos-containing material is subject to federal standards under EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) program. All projects are subject to additional requirements under state laws and regulations. Projects can range from something as small as a single pipe wrapping to a major removal project at a power plant or other large facility.

AUTHORITY

FEDERAL: Clean Air Act, Title 1, Section 112

STATE: Environment Article, Title 6, Subtitle 4; COMAR 26.11.21

PROCESS

Removing or encapsulating asbestos is required to be done by a contractor licensed by MDE. The contractor is required to notify the Division of the location of the activity and the approximate amount of asbestos-containing material to be removed or encapsulated prior to undertaking the work. From the information contained in the notification, the Division will determine whether the project is required to meet federal standards. About a quarter of all asbestos projects undertaken are subject to federal program requirements. Projects subject to such requirements are considered a priority and an inspection will generally take place. Priority is also given to inspecting contractors with poor performance records, projects in close proximity to other priority projects (for inspection efficiency) and projects for which complaints have been lodged. The focus of an inspection is on determining whether a contractor is adhering to the standards designed to protect workers and the public from exposure to asbestos. Some sites, such as demolition sites, where no notification has occurred but where asbestos may be encountered, are also inspected.

INSPECTION COVERAGE RATE

The inspection coverage rate is computed as the number of sites inspected divided by the number of notifications received. Note that the Division receives notifications for any amount of asbestos that is disturbed. This will include notifications for one to two feet of removal in which the project will last for maybe two hours, to notification for thousands of linear and square feet, in which the project may last up to twelve months. State law governs the notification process for small projects, and requires only that the contractor notify the Department before the project begins. The larger projects are governed by federal requirements, and the contractor is required to notify at least ten days prior to beginning the project. It is more likely that an inspection will take place at a site where removal will last a day or more. The Division is required by state law to annually inspect at least one asbestos removal project by each contractor. The Division meets this requirement.

SUCSESSES/CHALLENGES

Contractors intending to abate asbestos are required to notify MDE. MDE inspects as many of these projects as possible, generally focusing on the more substantial projects. In FY 2016, the Asbestos Division inspected about 5% of sites that provided notification to MDE.

In FY 2016, the number of sites inspected and the number of inspections continues to remain below previous levels due to the staff resources needed to implement the 2013 law requiring third-party testing for asbestos workers.

Asbestos

Radiation Machines Division

PURPOSE

The Radiation Machines Division (RMD) regulates manufactured electronic sources of radiation to minimize the amount of unnecessary radiation exposure received by the general public. These electronic radiation sources include dental and veterinary x-ray machines, mammography (breast imaging) machines, diagnostic and therapeutic radiation machines, and other electronic radiation devices such as security screening devices used in research or industry.

State regulations, which derive in part from U.S. Food and Drug Administration (FDA) statutory and regulatory directives and guidelines, require that all radiation exposures be “As Low As Reasonably Achievable” (ALARA). Radiation exposure can cause adverse health effects, with risk that varies depending upon the amount of radiation received, frequency of radiation exposures, and radio-sensitivity of body parts. Although the medical benefits of radiologic diagnostic and therapeutic treatment procedures far outweigh potential risks of sustained biological damage, evidence suggests that cells in the human body can be damaged by numerous small exposures over time, and that these multiple exposures have a cumulative health effect that may be as detrimental as receiving a single large exposure. There continues to be a growing awareness in the health community that human health impacts from radiation machine procedures are on the rise due to the increased use of radiation for diagnosis and therapy. To some degree, x-ray imaging has replaced procedures that do not require radiation, such as ultrasound or magnetic resonance, causing the general public to increase their level of radiation exposure.

AUTHORITY

FEDERAL: Radiation Control for Health and Safety Act of 1968, 21CFR1000;
Mammography Quality Standards Act; 21CFR900

STATE: Environment Article, Title 8 “Radiation”;
COMAR 26.12. Radiation Management

PROCESS

The RMD ensures all radiation machine facilities are inspected on cycles required by statute, regulation, administrative policy, or contract. Note that while mammography inspection reports are provided to the FDA for follow-up enforcement actions, the FDA’s response actions are not included in this report.

Dental, veterinary, and mammography facilities are required to renew the radiation machine facility registration of the x-ray equipment every two years. Facilities with x-ray machines subject to certification are required to renew the radiation machine facility registration on the same schedule as the certification inspection frequency presented in the chart below.

SUCSESSES/CHALLENGES

Successes in FY 2016 include the continued high rate of compliance for the medical, veterinary, and mammography facilities. A contributing factor to the high compliance rate is that radiation machine facilities are required to have preventive maintenance performed on their radiation machines at the interval recommended by the manufacturer for each machine. If an interval is not specified, the maintenance must be performed every 12 months. For a radiation machine, the potential consequence of failure to perform recommended maintenance is greater radiation exposure than clinically necessary to patients and occupational workers. The challenge still remains on how to improve initial compliance with the preventive maintenance regulation. Sending reminder notices and issuing Notices of Violations are two tools that continue to be used to increase the preventive maintenance compliance rate.

The RMD cross-trained registration and certification staff members to perform dental inspections, and the effort will later extend to other units with the Radiological Health Program.

The RMD continues to investigate diagnostic misadministrations, which are errors made when using a radiation machine to x-ray a part of a patient’s body to diagnose an illness or injury. Errors include taking an x-ray of a wrong patient or of the wrong part of the patient’s body or administering an x-ray when a different procedure was ordered.

The chart below shows the types of facilities regulated and the frequency at which they are inspected. For clarity, please note that the words machine and tube are used interchangeably.

Facility Type	Registered X-ray Tubes*	Inspection Frequency
High Energy & Particle Accelerators	2 facilities, 2 certified tubes	Annual
Medical (Therapy) Accelerators	45 facilities, 77 certified tubes	Annual
Hospitals	61 facilities, 1,284 certified tubes	Biennial
Physicians: Chiropractic, MD, GP, Podiatric	1,271 facilities, 1,913 certified tubes	Biennial
Industrial	327 facilities, 673 certified tubes	Triennial
Dental	2,825 facilities, 10,105 tubes	Triennial
Veterinary	589 facilities, 675 tubes	Triennial
Mammography	142 facilities, 208 tubes	Annual

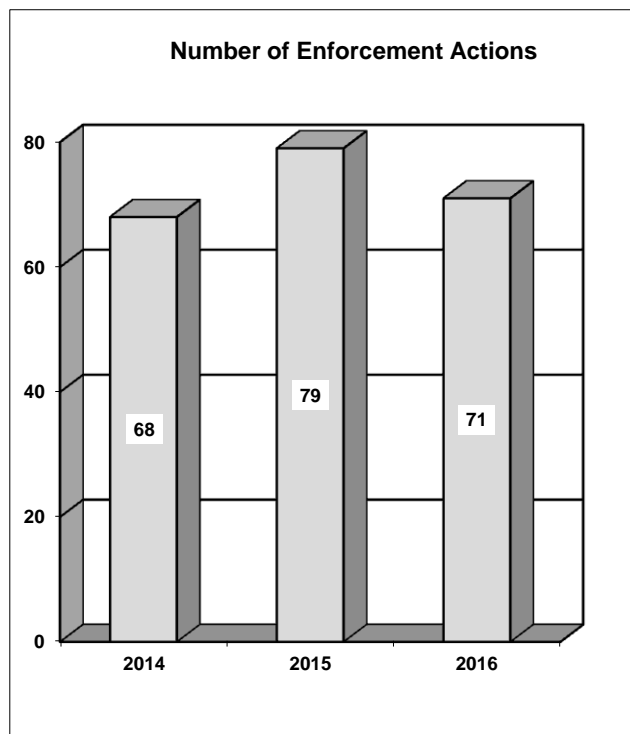

*Code of Maryland Regulations (COMAR) 26.12.03 states that “Radiation Machine” means a device that is capable of producing radiation. On any radiation-producing equipment with more than one x-ray tube, or other single point from which radiation may be emitted, each x-ray tube or radiation emission point is considered a separate radiation machine. “Tube” is defined in COMAR 26.12.01.01 as an x-ray tube or other single point from which radiation may be emitted.

Radiation Machines

Radioactive Materials Licensing and Compliance

PURPOSE

The Radioactive Materials Licensing and Compliance Division (RAMLCD) issues licenses to, and inspects, hospitals, cancer treatment and diagnostic imaging centers, private medical practices, construction, research and development firms, academic institutions, nuclear pharmacies, and manufacturers and distributors of sealed sources and devices (SS&D). Regulation of the use, handling, and control of both generally-licensed and specifically-licensed radioisotopes is mandated to protect the health and safety of radiation workers and the general public as well as minimize environmental contamination. Facility radiation safety programs and authorized activities are evaluated during the licensing and inspection process to ensure compliance with Maryland ionizing radiation regulations in such areas as security of radioactive material, training of personnel, possession of adequate protective devices, and control of radiation hazards. The RAMLCD also registers and inspects companies licensed in other jurisdictions using radioactive material in Maryland under reciprocal recognition. The RAMLCD is the primary State responder to public hazards involving radioactive material, such as transportation incidents or any other incidents involving loss of control of radioactive material in a Maryland jurisdiction. The RAMLCD also provides radiological technical input and coordination for statewide emergency preparedness in the areas of shipment of high level radioactive waste through Maryland; increased security at certain types of facilities possessing radioactive material, facilitation of training of local responders to radiation emergencies and assistance in the evaluation, coordination, and implementation of policies and procedures for preventive radiological nuclear detection. RHP is one of the primary State responders should there be a radiation incident at a fixed nuclear facility with potential impact to Maryland residents. The RAMLCD additionally evaluates new and modified devices containing sealed radiation sources submitted by Maryland companies for radiation safety and engineering reliability prior to the issuance of SS&D Certifications.

AUTHORITY

FEDERAL: Atomic Energy Act of 1954, as amended;
10 CFR (Nuclear Regulatory Commission) Parts 1-171

STATE: Environment Article, Title 8; "Radiation";
COMAR 26.12. Radiation Management

PROCESS

The RAMLCD issues licenses with a seven-year term for approximately 52 types of radioactive material uses in accordance with established guidance. The RAMLCD inspects facilities for compliance with radiation regulations and adherence to license conditions and radiation safety procedures and practices. Inspections are performed over a one-to-four-day period by one inspector or a team of inspectors at a frequency based on the quantity, activity and toxicity of the radioisotope(s), the potential hazard resulting from its use, and the nature of the operation. Inspection frequency ranges from annual to every five years, with possible modification for licensees with a poor compliance history. When violations occur, corrective actions are required and are verified through several means, including possible follow-up inspections. RAMLCD also conducts investigations throughout Maryland in response to radioactive materials (RAM) incident reports, complaints, suspected violations, or unauthorized RAM use. The Division also oversees the decommissioning of

previously-licensed RAM facilities, conducts safety evaluations on RAM sources and devices, and performs pre-licensing visits to all applicants prior to the issuance of a license. Additionally, the RAMLCD performs inspections on at least 25% of the most hazardous radiation operations conducted in Maryland by out-of-state radioactive material licensees under reciprocal recognition of their licenses. RAMLCD maintains an equipped and trained radiological emergency response team with a mission to respond on a 24/7 basis to radiological emergencies in the public domain and to provide radiological technical assistance to local law enforcement.

SUCCESSES/CHALLENGES

Successes in FY 2016 include the full implementation of federal radioactive material security regulations defining national standards of increased controls for those licensees with sufficient quantities and types of radioactive materials that, if stolen, would pose a national security threat; the evaluation and approval of the radiation safety and engineering safety qualifications of a complex radioactive material medical device prior to national device registration and allowing for the manufacture, sale, and distribution of the device across the nation; the continuation of training of state and local personnel to ensure statewide preparedness for a nuclear utility accident. RAMLCD also continued implementation of the State's Preventive Radiological Nuclear Detection activities and maintenance of response capabilities regarding the threat of malicious use of radioactive material. With the help of federal agencies, RAMLCD continued to remove large quantities of unwanted radioactive material from the state.

Challenges include the continued evaluation and implementation of increased security for radioactive material in Maryland; continued outreach and education of Maryland citizens regarding the actual hazards of ionizing radiation; further implementation of preventive radiological detection in Maryland and providing new innovative; and efficient solutions to the many radiation safety challenges within both the regulated community and the public domain.

INSPECTION COVERAGE RATE

The following chart shows the inspection frequency, the number of licenses that are inspected at that frequency, and an example of the type of licenses:

Inspection Frequency	Number of Licenses	Examples of License Types
Annual	9	Gamma Knife (cancer therapy) Industrial Radiography
2 Years	49	Mobile Medical Vans Academic & Medical Research Nuclear Pharmacies Remote Afterloader (cancer therapy)
3 Years	114	Hospitals Brachytherapy (cancer therapy) Medical Offices
5 Years	364	Fill/Density Gauges Nuclear Pacemakers Diagnostic Nuclear Medicine

Notes for above table:

Licenses inspected in the annual, two-year and three-year inspection frequencies are the most complex and represent those types of radioactive material activities with the greatest radiation hazard to users and members of the general public.

Facility radioactive material inspections are resource-intensive. Onsite facility inspection times vary from half a day with one inspector for the five-year inspection frequency, to a four-day inspection with three inspectors for certain extremely complex annual inspections.

LAND MANAGEMENT ADMINISTRATION

Land Management Administration

Executive Summary

The Land Management Administration's (LMA's) mission is to protect human health and preserve and restore land and water resources. LMA works to reduce the quantity and toxicity of generated wastes through recycling and source reduction, ensures the control and proper disposal of waste, manages lead paint compliance activities, assures that oil is handled in an environmentally-safe manner, and oversees the remediation of contaminated sites for viable economic development. This mission is achieved by maintaining a highly visible presence in the regulated community, providing assistance to stakeholders, and developing long-term strategies for waste management needs.

In FY 2016, LMA overall issued 2,856 permits/registrations compared to 2,581 in FY 2015. This is an increase of 275 permits/registrations. The total of permits/registrations in effect at the end of FY 2016 increased to 9,409 from 9,065 in FY 2015. Permits/registrations being issued and in effect increased mainly due to the work that the Lead Rental Registry Section has done in researching property owners and bringing them into compliance.

The number of other regulated sites for LMA continued to increase in FY 2016 by 10,524. In FY 2016, 172,426 other sites were regulated, compared to 161,902 in FY 2015. The outreach and compliance work in the Lead Rental Registry Section continues to have the biggest impact on the increase of other regulated sites. In addition, the Sewage Sludge Utilization Program saw an increase of 20 other regulated sites, were mostly due to the increase of on-site treatment and operational reviews of wastewater treatment plants.

The Lead Poisoning Prevention Program had the highest decrease in inspections. Inspections decreased by 33,345, which was a result of a decline in third party inspections due to a reduction of property owners attempting to meet the lead-free exemption.

The number of sites audited but not inspected decreased to 2,221 in FY 2016 for LMA compared to 3,889 in FY 2015. This is a decrease of 1,668 audits. The Scrap Tire Unit saw the largest decrease. The unit is transitioning to the use of a different database for tracking audits conducted and sites audited but not inspected. In FY 2016, there was an issue which delayed the transition to the new database. This affected the ability of the unit to perform and track their audits and resulted in a smaller number of audits being performed.

The number of inspections, audits and spot checks performed in LMA decreased by 38,442. The Scrap Tire Unit had the highest decrease other than the Lead Poisoning Prevention Program. The Scrap Tire Unit had a decrease of 3,705. This decrease was due to the database issues described above.

The increase in enforcement actions is mainly due to the continued work of the Lead Rental Registry Section to review the registration history of rental properties in support of the Department's ongoing efforts to reduce childhood lead poisoning as well as to respond to a legislative audit finding. During FY 2016 the section began issuing Notices of Violation (NOV) to property owners who did not renew their property registration in 2013, 2014 and/or 2015. More than 11,000 NOVs were issued by the Lead Rental Registry Section.

In FY 2016, LMA collected \$2,287,331 in penalties, which was an increase of \$750,745 from FY 2015. In FY 2016, The Lead Rental Registry Section collected \$1,407,036 in penalties from the NOV's that were issued.

LMA continues to make progress in the removal of scrap tires from illegal stockpiles across Maryland. In FY 2016, LMA removed 29,340 scrap tires. At the end of FY 2016, there were 61 stockpiles with an estimated 850,520 tires remaining to be removed. Cleanup at one site, with an estimated 500,000 tires, has begun and another site with 200,000 tires was discovered in FY 2016.

In the Lead Poisoning Prevention Program, there was a slight increase in the percentage of children with blood lead levels equal to or greater than 10 micrograms per deciliter ($\mu\text{g/dL}$).

Land Restoration Program

PURPOSE

The Land Restoration Program (LRP) protects public health and the environment by identifying sites that are, or potentially are, contaminated by controlled hazardous substances (CHS). Until 1997, Maryland placed sites where hazardous substances were released, or possibly released, on the State Master List and in the Disposal Site Registry. The sites were prioritized for remedial activities. Starting in 2013, the State Master List was revised and renamed. Newly identified sites are now recorded on the Brownfield Master Inventory (BMI) List - Active Sites (Appendix H) or the Brownfield Master Inventory List - Archive Sites (Appendix I). The Brownfield Master Inventory List is available on the Department's website at:

<http://www.mde.maryland.gov/programs/Land/MarylandBrownfieldVCP/Pages/BrownfieldMasterInventory.aspx>

AUTHORITY

FEDERAL: Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)

STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.14

PROCESS

LRP conducts and/or oversees environmental assessment and cleanup projects in Maryland. The assessment activities include investigating and sampling sites to determine whether cleanup is necessary. If the identified contamination is determined to represent a risk to public health or the environment, remedial activities are conducted to address the sites contaminated by controlled hazardous substances. Assessments and cleanups are conducted based on available resources. The Disposal Site Registry includes all the sites for which the State performed a preliminary site assessment and determined hazardous waste is present. For these sites, State funds will be used to conduct remedial action as no viable responsible party has been identified. This list is updated annually. The Disposal Site Registry includes all the information and ranking set forth in Title 7-233(f)(2).

SUCCESSSES/CHALLENGES

LRP maintains a list of potential hazardous waste sites in the State. Before the development of the Brownfield Master Inventory (BMI) in 2013, this list was known as the "State Master List." It included properties known by the State to be contaminated or potentially contaminated and included sites on the federal CERCLIS and on EPA's Archive list. This list included sites that met the brownfields definition. LRP also maintained a Site-Specific Assessments list, otherwise known as the State "Non-Master List" of sites.

In FY 2013, LRP transitioned to the BMI. The BMI list serves as the tool for tracking new and closed sites. As of June 30, 2016, there were 1,033 active sites and 986 archived sites on the BMI list, which includes Voluntary Cleanup Program sites; sites assessed using federal grant funding; formerly used defense facilities; assessment and cleanup activities at sites subject to the CHS Response Plan; and sites identified as being impacted by CHS but

subject to other regulatory authorities such as the federal Corrective Action Program, the federal Toxic Substances Control Act, or Maryland's Solid Waste Program.

The LRP is continuing to work with EPA on seven active, private National Priority List (NPL) sites and one site that is being managed under the EPA's Superfund Alternative Site Initiative, which allows the Responsible Party to implement a NPL-caliber remediation without NPL listing. The Program also addressed ten Federal NPL sites, produced two federally-funded Pre-CERCLIS Screening Reports, conducted one preliminary assessment, and one site investigation during FY 2016.

Hazardous Waste

PURPOSE

The federal Resource Conservation and Recovery Act (RCRA) established a national program of hazardous waste management. The Maryland Department of the Environment has been granted authorization by the U.S. Environmental Protection Agency (EPA) to be the primary implementer of most elements of the federal hazardous waste regulatory program in Maryland. Regulations implemented by the Department's Land Management Administration (LMA) govern management of hazardous waste from the point of initial generation through its final disposition by reuse, recycling, treatment, or disposal. Maryland's regulatory program includes elements that are more stringent and broader in scope than the federal program. Important elements of this regulatory program include the following:

- identification and tracking of hazardous waste handlers (generators, transporters, and operators of permitted facilities) through issuance of identification numbers and maintenance of a related database;
- detailed standards for hazardous waste management;
- tracking shipments of hazardous waste from generation to disposal through the hazardous waste manifest system;
- certification of transporters of hazardous waste;
- tracking waste generation and management through a biennial reporting requirement; a permitting program requiring permits for persons who treat hazardous waste, store hazardous waste for periods of time longer than 90 days, operate a hazardous waste disposal unit, or maintain a closed hazardous waste disposal unit; and
- compliance evaluation to assess compliance with applicable requirements, and institute enforcement actions and corrective measures as necessary.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act (RCRA) - Subtitle C

STATE: Environment Article, Title 7, Subtitle 2; COMAR 26.13

PROCESS

The LMA's Resource Management Program (RMP) is responsible for reviewing Controlled Hazardous Substance (CHS) Facility permit applications to treat, store or dispose hazardous waste. Through the permitting process, RMP evaluates the permit applicant's ability to manage hazardous waste safely and in conformance with applicable regulatory requirements. The permit specifies all requirements that the permit holder is subject to in conducting the permitted activities. Tentative determinations by RMP to issue or deny an application for a permit include opportunities for public review and comment. The permit holder is evaluated for compliance with the terms of the permit in compliance inspections of the permit holder's facility. During these inspections, compliance is evaluated by Solid Waste Program compliance and enforcement staff against all applicable hazardous waste regulatory requirements.

The Technical Services and Operations Program (TSOP) is responsible for issuance of RCRA Subtitle C Site Identification Numbers (EPA ID Number), collecting and reporting the Biennial Report (BR) data, collecting and tracking manifests, and certification of transporters of CHS. TSOP issues new EPA ID Numbers, updates information for existing EPA ID

numbers, and submits this information to EPA's RCRAInfo database. TSOP collects the BRs, which summarize waste generated during each odd-numbered calendar year. BRs are analyzed and information reported by large-quantity generators (LQGs) is submitted to EPA. Manifests are completed when generated wastes are shipped off-site and copies are submitted to TSOP for monitoring and tracking. Any transporter who picks up or drops off CHS must be certified as a hauler and have all vehicles/trailers certified. Failure to comply with Maryland and federal laws and regulations can result in corrective actions.

The Solid Waste Program (SWP) is responsible for compliance at hazardous waste facilities, which include permitted Treatment, Storage and Disposal (TSD) facilities and federally defined large and small quantity generators (LQGs and SQGs). All permitted TSD facilities and those that receive off-site waste are inspected at least once a year. LQGs, defined by federal regulations as generating 2,200 pounds or more of hazardous waste in any calendar month are inspected at least once every five years. New LQGs and those who have not been inspected in the last three years are first priorities. Maryland has approximately 455 LQGs and 13,000 SQGs. Resource constraints limit inspections of SQGs to complaint-response situations.

SUCCESSSES/CHALLENGES

During FY 2016, the SWP's Compliance Division inspected 212 sites, which was a decrease from 314 sites in FY 2015. The total number of inspections, audits and spot checks decreased to 364 in FY 2016 from 594 in FY 2015. One reason for the decrease was limited staffing and EPA grant commitments. The Solid Waste Program's Compliance Division focused strictly on performing physical inspections to meet those grant commitments rather than audits conducted through an in-office file review.

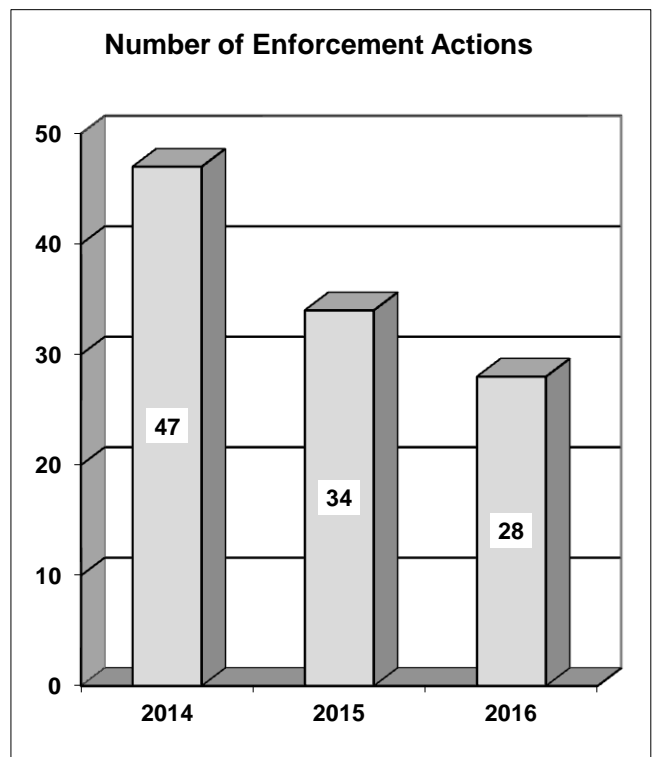

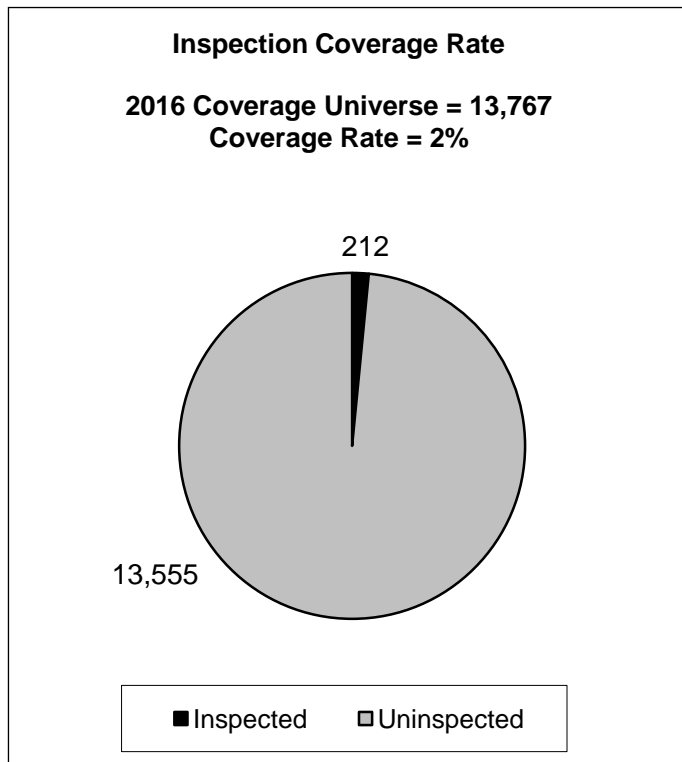

The FY 2015 inspection coverage rate of 2% remained the same in FY 2016. Enforcement actions decreased from 34 in FY 2015 to 28 in FY 2016. The drop in enforcement actions was due to the retirement of a lead engineer who handled many of the inspections of LQG's and TSD's. The SWP's Compliance Division will continue to prioritize inspections for the entire state.

The Hazardous Waste Generators continue to increase due to retail stores and pharmacies (Wal-Mart, CVS, Walgreens, etc.) now being required to obtain a generator identification number for their management of waste pharmaceuticals. The majority of these new generators are claiming LQG status regardless of their actual quantity of CHS generated. In addition, TSOP is conducting a major cleanup of identification numbers including deactivating closed facilities. This is the reason why the universe remains consistent despite the increase in issuing new generator identification numbers.

Hazardous Waste

Lead Poisoning Prevention

PURPOSE

The Lead Poisoning Prevention Program (LPPP) oversees activities designed to reduce the incidence of childhood lead poisoning. These activities involve accreditation and oversight of lead abatement service contractors, maintenance of a registry of children with elevated blood lead levels (greater than or equal to 10 micrograms per deciliter), and enforcement of the statute and regulations. The Technical Services and Operations Program (TSOP) works closely with LPPP and is responsible for the maintenance of the registry of rental properties.

AUTHORITY

FEDERAL: Toxic Substances Control Act

STATE: Environment Article, Title 6, Subtitles 3, 8 & 10; COMAR 26.16.01-.04 and Environment Article, Title 7, Subtitle 2; COMAR 26.02.07

PROCESS

Maryland law requires that all blood lead level (BLL) test results be reported to the Department, which in turn reports all results for children at risk to the local health departments for case management. Through these BLL referrals and by other means, if LPPP discovers that an affected property (pre-1978 rental dwelling properties) does not meet the required standards of care (risk reduction, registration of the rental property, and distribution to tenants of two documents explaining tenant rights and the hazards of lead paint), appropriate corrective actions against a violating party may be taken. In order to meet the required standards of care, accredited third-party inspectors and/or contractors may be hired by property owners to meet these compliance standards. LPPP may perform oversight of these inspectors and/or contractors to ensure compliance with regulatory standards as outlined in the statute and regulations so that further exposure to lead hazards is kept to a minimum.

TSOP regulates all affected properties (pre-1978 rental dwelling properties). TSOP collects information from owners of affected properties and issues tracking numbers for the purpose of registration, inspections, certification and annual renewals of affected properties.

SUCCESSSES/CHALLENGES

Lead data is collected on a calendar-year basis. During CY 2015 a total of 110,217 (20.6%) children were tested from a universe of 535,094 children 0-72 months of age. There was a slight percentage decrease in testing compared to 20.7% in 2014. The population of children 0-72 months of age increased from CY14 to CY15 by 7,790 children.

Of those 110,217 children tested in CY15, a total of 377 (0.3%) were identified with a venous or capillary blood lead level \geq 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$). This was an increase of 22 children compared to 355 during CY14. Children identified with a first-time venous or capillary blood lead level \geq 10 $\mu\text{g}/\text{dL}$ during CY15 totaled 280 (0.3%). This was also an increase of 18 children with a new incidence case compared to in CY14. It should be noted that the incidence and prevalence percentages remained the same in CY15 and the increase

in numbers of blood lead levels \geq 10 micrograms per deciliter ($\mu\text{g}/\text{dL}$) are attributed to the increase in the population tested.

In 2015 a revised Targeting Plan (Plan) for children recommended a revised strategy for testing Maryland children for lead exposure. It was the first comprehensive reassessment of lead testing strategies in the State since 2004 and incorporates new recommendations from the U.S. Centers for Disease Control and Prevention (CDC) regarding blood lead levels that will require follow up action from clinicians, government agencies, and other stakeholders. As a result of the Plan, all health care providers are now required to test all 1 and 2 year olds in Maryland.

The number of compliance inspections performed by LPPP inspectors increased from 2,650 in FY 2015 to 3,719 in FY 2016. The increase was a direct result of the program having hired two new inspectors during the last quarter of FY 2016. The Program continues to build compliance partnerships with other government agencies throughout Maryland. This coordination has allowed the Program to do more targeted enforcement.

The inspection coverage of the regulated community decreased from 64% in FY 2015 to 38% in FY 2016. The decrease in the coverage rate resulted from a significant decrease in the number of third party inspections as the number of property owners attempting to meet the lead-free exemption of the law has slowed. Accredited inspectors are hired by property owners primarily to perform lead inspections required by law on pre-1978 residential rental properties. Inspections are mandated before tenants move into pre-1978 residential rental units. The results of these inspections are submitted to LPPP.

The January 1, 2015, change in the law defining “affected property”, adding properties built between 1950 and 1977, has been a huge challenge for TSOP’s Lead Rental Registry Section. The number of rental homes that the Section is responsible for registering has tripled.

A success for TSOP’s Lead Rental Registry Section is an increase in the number of properties registered. The Lead Rental Registry Section began an initiative to research properties that were required to renew registration in 2013, 2014 and 2015. If the property registration was not renewed the Section issued a Notice of Violation (NOV). This resulted in over 11,000 NOVs issued and over \$1,400,000 collected in penalties. The initiative was undertaken to support the Department’s ongoing efforts to further reduce childhood lead poisoning as well as to respond to a legislative audit finding.

During FY 2016, TSOP took on a project in an effort to address an audit suggestion to find and correct the Universe of Rental Properties that should be registered with the Department. The Rental Registry Section mailed out over 100,000 letters to potential rental property owners who were never registered with the Department. This has resulted in over 2,000 new registrations. Due to the quantity of the mail out, TSOP faced an increase in phone calls to the Lead Hot Line and emails, resulting in slower response times.

Lead Poisoning Prevention

Oil Control Program - Aboveground Facilities

PURPOSE

The Oil Control Program (OCP) performs a broad range of activities related to the safe handling, storage, and remediation of petroleum products. OCP issues permits and performs oversight of aboveground storage facilities, transportation facilities, and oil-contaminated soil treatment facilities. Permits are also issued by OCP for the discharge of treated oil-contaminated water. In addition, OCP issues licenses and collects fees for the import of petroleum products into Maryland.

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

The OCP is responsible for reviewing permit applications, inspecting sites prior to writing permits, and issuing Oil Operation Permits for facilities handling oil in Maryland. Site visits may also lead to the discovery of compliance violations. During inspections, facility conditions are documented and the permittee is advised of the status of compliance. If corrective action is warranted, the facility is directed in accordance with Department guidelines and procedures. The OCP also responds to aboveground oil spills throughout the State. In addition, the OCP licenses entities that transfer oil into Maryland and collects a fee on the transfer.

SUCSESSES/CHALLENGES

Overall management of the permitting and inspection activities have been challenging in FY 2016. There continues to be only one Regulatory and Compliance Engineer (RCE) issuing permits for the entire State. A contractual RCE I was hired in late FY 2016 and will help in correcting the backlog of permit inspections and issuing permits.

The combination of compliance assistance, permit application review, and enforcement continues to result in good management of aboveground storage tanks containing petroleum. Permit application reviews and permit site visits continue to reveal opportunities for compliance assistance to prevent releases to the environment or other emergencies at a facility.

The number of aboveground oil storage facility sites inspected by OCP decreased from 262 in FY 2015 to 229 facilities inspected in FY 2016. The number of permits/licenses issued this fiscal year decreased from 215 in FY 2015 to 204 in FY 2016.

PENALTIES			
Amount of administrative or civil penalties obtained (\$ collected in FY)			\$15,500

* Permits/licenses. This includes aboveground storage tanks and oil-contaminated soil operations. The Oil (Contaminated Soil) Operations Permit is issued to facilities that store and/or treat soil contaminated with petroleum product from underground storage tank leaks or surface spills. Due to the small number of facilities involved, these numbers were incorporated into the Oil Aboveground Facilities numbers beginning in FY 1999.

** Coverage rate above is computed as the total number of permitted sites inspected and dividing that by the sum of the total number of permits/licenses in effect.

OCP - Aboveground Facilities

Oil Control Program - Pollution Remediation Activities

PURPOSE

The Oil Control Program (OCP) oversees remediation activities at sites where petroleum products have been discharged and are impacting soil or groundwater. The oversight ensures that responsible parties remediate the site in a timely manner, protecting the public's health and the environment. The majority of sites are gasoline service stations, both operating and closed. Sites also include commercial and residential heating oil systems, and businesses that have their own petroleum distribution systems for use in vehicle fleets.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

When a release of petroleum product is reported to OCP, a team of specialists is assigned to the investigation. Groundwater and soil cleanups are highly technical in nature and require detailed attention. The team will prioritize the response to the release based on multiple factors including the product type, amount released, and the potential impact to the health of the public and the environment. Most remedial sites will require frequent inspections and meetings. During inspection the responsible party will be advised of the direction of the cleanup and status of compliance. Each site is in violation by virtue of the fact that a release has occurred and corrective action will be performed in accordance with the Department's guidelines and procedures. When necessary, enforcement actions are taken if the responsible party is not complying with cleanup orders.

SUCCESSSES/CHALLENGES

A strong field presence of technically-proficient staff managing cleanups; an emphasis placed on over excavating at the time of UST removals to remove the worst contamination from the ground; and a strong UST Compliance Division are three major factors in maintaining success in managing cleanups by the OCP Remediation Division. There was an increase of active remediation sites to 842 in FY 2016 from 783 in FY 2015.

* This number is only sites that are active at the end of the fiscal year. Additional sites that open and close within the year, and sites that are evaluated but do not lead to an open remediation case, are not counted in this number, but they are counted as compliance evaluations.

Oil Pollution Remediation Activities

Oil Control Program – Underground Storage Tank Systems

PURPOSE

The Oil Control Program (OCP) inspects underground storage tanks (UST) with the goal of reducing the incidence and severity of releases associated with the storage of regulated substances in USTs. This is accomplished by ensuring compliance with operational requirements including: release detection; corrosion protection; overfill prevention; financial responsibility requirements; and construction standards. Sites can include service stations, oil terminals, hospitals, schools, military facilities, and marinas.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle I

STATE: Environment Article, Title 4, Subtitle 4; COMAR 26.10

PROCESS

The State of Maryland requires all regulated UST systems be registered with the Oil Control Program. In addition, all UST system technicians, removers and inspectors must pass a test given by OCP and maintain a valid certification. Every three years, at a minimum, each federally regulated UST system is inspected as required by EPA. A tank owner is required to hire a certified third party inspector to complete the inspection. When violations are found an OCP inspector will conduct a follow up inspection and issue corrective action if warranted.

SUCCESSSES/CHALLENGES

A strong field presence of technically-proficient staff managing the ongoing activities at registered UST facilities is a major factor associated with prior fiscal year successes by the OCP Compliance Division. The OCP Compliance Division has seen a high rate of Environmental Compliance Specialist turnover for the past several years.

The EPA requires that UST facilities be inspected once every three years. The OCP Compliance Division met this requirement in FY 2016 by overseeing the inspection of 1,002 of the 2,886 registered UST facilities in FY 2016. The facilities inspected continue to show a good compliance rate due to the diligence and compliance assistance that the OCP Compliance Division has been able to provide over the last several years.

* Certified UST technicians and removers are part of the regulated community and, therefore, the inspection universe, and were included in this report starting in FY 2000.

** Coverage rate is computed as the total number of sites inspected divided by the total number of registered UST sites. Technician and Remover Certifications are part of the Program's universe. However, this number is not included in coverage rate in order not to bias the evaluation of the Program's goal to visit each underground storage tank system on a routine basis.

Oil Underground Storage Tank Systems

Refuse Disposal

PURPOSE

Improper handling of society's byproducts in the form of domestic, commercial and industrial wastes can pose direct threats to the public health and the quality of Maryland's water resources. The Solid Waste Program (SWP) is responsible for the review of the technical information needed to support application for new solid waste disposal facilities and coal combustion by-product (CCB) landfills. Inspections and enforcement of regulations are conducted routinely at permitted and unpermitted disposal facilities, CCB landfills, CCB storage sites and for CCB transportation vehicles. Regulated solid waste acceptance facilities include municipal landfills, rubble landfills, land-clearing debris landfills, non-hazardous industrial waste landfills, municipal incinerators, solid waste processing facilities and transfer stations. Corrective action will be performed in accordance with the Department's guidelines and procedures if violations are found.

AUTHORITY

FEDERAL: Resource Conservation and Recovery Act - Subtitle D; 40 CFR 257 and 258
STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04.07, 26.04.10

PROCESS

Permits are required for the construction and operation of solid waste acceptance facilities. The permit review activities cover a broad range of environmental and engineering elements to ensure state-of-the-art techniques protect the public health and environment. SWP geologists and engineers review groundwater monitoring and soil gas data required by the permit to detect aqueous and gaseous pollutants, which may be migrating through the ground from landfills and dumpsites. When releases are detected, plans for landfill caps, groundwater and gas extraction, and treatment systems are required and subject to SWP's review and approval prior to implementation. Routine unannounced inspections are performed to ensure compliance. Inspectors also inspect complaints regarding unpermitted facilities and open dumps. Inspections and investigations are conducted to find, stop and clean up illegal dumps and reduce the problems they cause, including odor, soil erosion, discharge of pollutants to surface water, and groundwater pollution. If violations are found, corrective actions are conducted in accordance with the Department's guidelines and procedures.

SUCCESSSES/CHALLENGES

The inspection coverage rate of 97% remained the same in FY 2016. The number of site inspections decreased slightly from 232 in FY 2015 to 225 in FY 2016. The total number of inspections, audits and spot checks declined from 1,493 in FY 2015 to 1,370 in FY 2016. Refuse Disposal enforcement actions decreased from 94 in FY 2015 to 63 in FY 2016. During FY 2016, 161 ongoing violations were resolved compared to 146 in FY 2015.

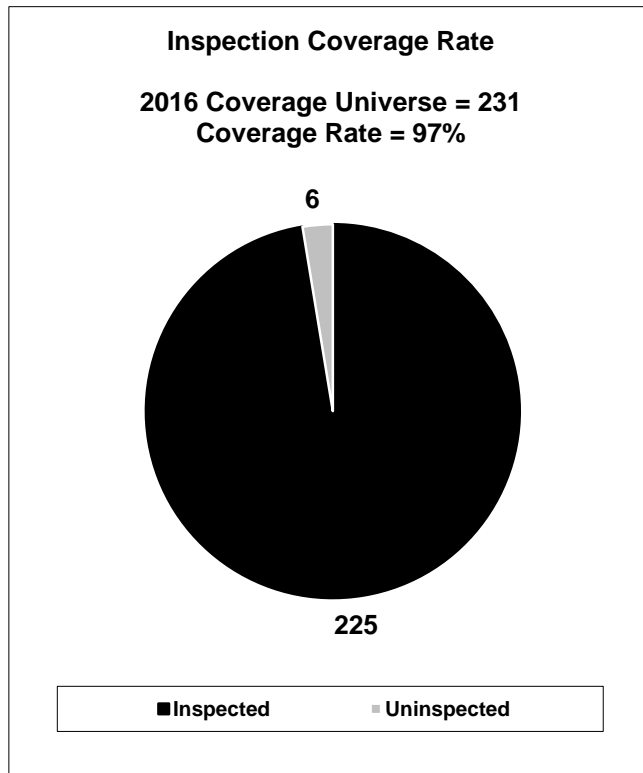

In FY 2016, the SWP inspectors received new, updated laptops with a new inspection reporting database. Inspectors continue to spend additional time in the office on development, testing and training activities related to the new hardware and software.

Refuse Disposal

Scrap Tires

PURPOSE

Licenses and approvals are required for the hauling, collection, storage, processing, recycling, and burning (tire-derived fuel) of scrap tires. These licenses and approvals ensure that scrap tires are managed in a manner protective of public health and the environment. In coordination with the Maryland Environmental Service (MES), the Scrap Tire Unit arranges for cleanup of illegal scrap tire dumps. Enforcement actions may be taken to ensure compliance with the scrap tire laws, regulations, and license and approval conditions.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2;
Environment Article, Title 10, Nuisance Abatement;
COMAR 26.04.

PROCESS

Any person who collects, stores, or hauls as part of a commercial business, recycles, or processes scrap tires is required to obtain the applicable license or approval. To obtain a license or approval, a person must submit a completed application and the required information. The Scrap Tire Unit may conduct a public information meeting on certain types of license or approval applications.

The Scrap Tire Unit requires property owners to cleanup illegally stockpiled scrap tires. Depending on available revenue, a State special fund can be used when a landowner fails to cleanup a scrap tire dump. Cost recovery from the landowner or other identifiable responsible party for all costs associated with the cleanup is required, unless the owner qualifies for an inheritance exemption. Corrective orders and penalties may be issued for violations in accordance with the Department's guidelines and procedures.

SUCCESSSES/CHALLENGES

The Scrap Tire Unit continues the cleanup of scrap tires from illegal stockpiles. New stockpiles continue to be discovered every year and during FY 2016 a total of 30 new sites containing approximately 220,524 scrap tires were discovered. A total of 37 stockpiles were cleaned up in FY 2016 resulting in the removal of 29,340 scrap tires. Since the inception of the Scrap Tire Unit in 1992, over 10.6 million scrap tires have been cleaned up from 1,030 stockpiles. At the end of FY 2016, there were 61 stockpiles containing approximately 850,522 scrap tires remaining to be cleaned up which includes 200,000 tires located at one site that was discovered in FY 2016. The remaining scrap tires to be cleaned up also include the 500,000 tires that were discovered in previous years at one site. Cleanups using FY 2016 State funds started in FY 2016 and will continue into FY 2017.

One of the challenges for the Scrap Tire Unit is finding processors for scrap tires, especially dirty scrap tires. Most of the scrap tire recyclers will reject dirty scrap tires because they will dull the expensive blades of their shredders. Harford Waste-to-Energy Facility was one of the few facilities that would accept dirty scrap tires, but the facility permanently closed in March 2016. There are only three scrap tire processors in Maryland that are currently accepting scrap tires from the public and these facilities are not equipped to handle the volume of scrap tires generated, especially from large State-funded cleanups and State-

funded Drop-Off Day Events in the State. There are processors in neighboring states, but many of them also reject dirty scrap tires. The Scrap Tire Unit has asked the Maryland Environmental Service (MES) to evaluate the current status of the Scrap Tire Recycling System (System) and to make recommendations for expanding the System.

Scrap tire inspections are performed by inspectors in the Solid Waste Program. Larger scrap tire facilities are inspected more frequently than smaller ones through routine unannounced inspections. Inspectors also investigate citizen complaints about illegal dumping or handling of scrap tires. The SWP's Compliance Division conducted 818 scrap tire site inspections at 527 sites in FY 2016. This is an increase over the 713 sites inspected during FY 2015. The inspection coverage rate in FY 2016 slightly increased to 17% from 15% in FY 2015. Enforcement actions decreased from 96 in FY 2015 to 78 in FY 2016. Additionally, two referrals were submitted to the Environmental Crimes Unit in FY 2016.

The unit is transitioning to the use of a different database for tracking audits conducted and sites audited but not inspected. In FY 2016, there was an issue which delayed the transition to the new database. This affected the ability of the unit to perform and track their audits and resulted in a smaller number of audits being performed.

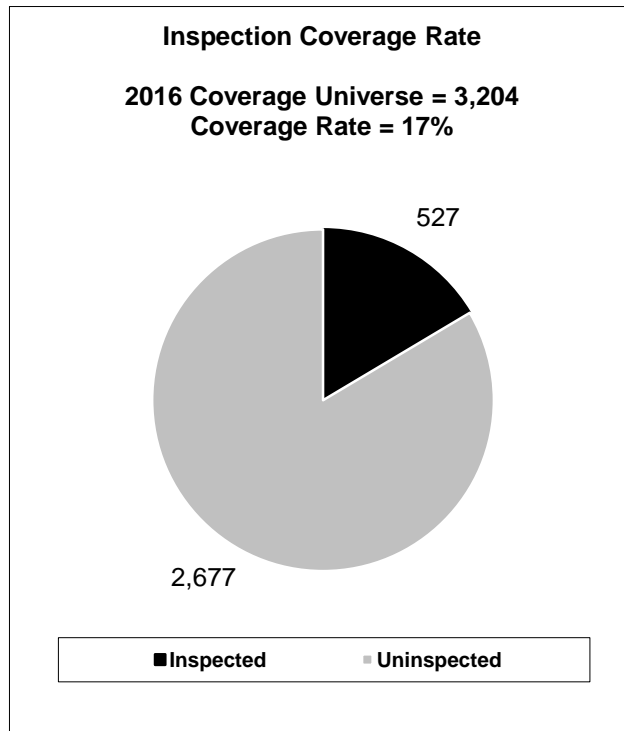

In FY 2016, the SWP inspectors received new, updated laptops with a new inspection reporting database. Inspectors continue to spend additional time in the office on development, testing and training activities related to the new hardware and software.

* Coverage rate above is computed as the total number of sites inspected divided by the total number of permits/licenses in effect plus the number of stockpiles with removal activities.

Scrap Tires

Sewage Sludge Utilization

PURPOSE

Sewage Sludge (also known as biosolids) is not sewage. It is one of the final products of the treatment of sewage at a wastewater treatment plant. A Sewage Sludge Utilization (SSU) Permit is required for any activities involving sewage sludge treatment, composting, transportation, storage, distribution, land application, energy generation or incineration, marketing, innovative or research project, disposal or alternative utilization at a municipal landfill in Maryland. The purpose of the permits is to ensure that sewage sludge is managed in a manner that is protective of public health and the environment.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2; COMAR 26.04

PROCESS

A person must submit a completed application and the required information. A person applying for a SSU Permit to apply treated sewage sludge on agriculture land must submit a nutrient management plan (NMP) in accordance with the Maryland Department of Agriculture (MDA) requirements. Copies of SSU Permit Applications are provided to local governments for their review, comments, and depending on the type of activity, an opportunity for a public meeting.

Composting facilities, pelletizers, and storage facilities are inspected several times per year. Landfill disposal operations are inspected during the course of routine landfill inspections. Land application sites are inspected when the workload allows or when complaints are received. If required, inspectors may recommend corrective action be taken. If a significant violation is found, a site complaint is issued. Corrective orders and penalties may be issued for violations in accordance with the Department's guidelines and procedures. Inspectors also investigate citizens' complaints about sewage sludge utilization.

SUCCESSSES/CHALLENGES

The number of inspections increased from 203 in FY 2015 to 224 in FY 2016. A total of 874 audits were completed in FY 2016. The SWP's Compliance Division issued one site complaint and one Notice of Violation with Penalty letter. All outstanding or ongoing violations have been corrected as the SWP's Compliance Division enters FY 2017.

In FY 2016, the SWP inspectors received new, updated laptops with a new inspection reporting database. Inspectors continue to spend additional time in the office on development, testing and training activities related to the new hardware and software.

When considering the coverage rate for sewage sludge utilization sites, it should be noted that many of these sites are farm fields that may only receive sewage sludge once or twice during a five-year permit life. Inspection efforts are concentrated toward those sites that are active during the year. The Resource Management Program will continue reporting the total coverage value for consistency with past values, and for comparison to other programs.

Sewage Sludge Utilization

Animal Feeding Operations

PURPOSE

The Animal Feeding Operations (AFO) Division regulates discharges from farms with animals that are stabled or confined for 45 days or more in any 12-month period in an area where crops/forage are not grown. AFOs have the potential to discharge nutrients and sediments to surface waters if improperly designed, constructed, operated, or maintained.

AUTHORITY

FEDERAL: Federal Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08.

PROCESS

AFOs are subject to regulations through registration as a Concentrated Animal Feeding Operation (CAFO) or a Maryland Animal Feeding Operation (MAFO) under a General Discharge Permit (GD Permit) for AFOs. This GD Permit requires these operations to be designed, constructed, operated and maintained according to specific standards which control or eliminate discharges of pollutants to the waters of the State. All large and certain medium AFOs are required to apply for coverage under the GD Permit.

During the five-year duration of the GD Permit, every registered operation will be inspected at least once to ensure compliance with the permit conditions. These conditions incorporate relevant portions of farm-specific required plans, including, but not limited to, a Comprehensive Nutrient Management Plan (CNMP) or a Nutrient Management Plan and Soil Conservation and Water Quality Plan, written in accordance with State and federal requirements. Complaints involving CAFOs or MAFOs are addressed by inspectors specifically assigned to the AFO Compliance Unit. Enforcement is accomplished through site complaints, notices of violation, and administrative, civil and criminal mechanisms.

SUCCESSSES/CHALLENGES

The AFO Division registered 158 AFOs that submitted completed Notices of Intent (NOIs) and required plans for coverage under the current GD Permit (14AF), which was issued on December 1, 2014. This represents 37% of the AFOs that have submitted complete applications for coverage. The remaining AFOs must be registered by November 30, 2019. As of June 30, 2016, there are 252 AFOs remaining with complete applications to be processed and 169 with incomplete applications. All applications for new construction of AFOs, expansions of existing AFOs and those that have allowed their coverage to expire are given priority. The remaining AFOs that were covered by the previous expired permit (09AF) are operating under an administratively extended registration. A total of 549 AFOs were registered by the end of FY 2016.

The AFO Division completed 2,363 inspections, audits and spot checks in FY 2016 compared to 1,858 in FY 2015. The number of sites inspected in FY 2016 increased to 174 from 171 in FY 2015. The increase in audits from 1,643 in FY 2015 to 2,097 in FY 2016 reflects the addition of a contractual employee dedicated to managing annual implementation reports (AIRs). The number of enforcement actions due to a delay in sending Notices of

Noncompliance from the reviews of IRs. These will be sent out during the first quarter of FY 2017.

A major challenge for the AFO Division is to register all AFOs under the new GD Permit in a timely fashion. The AFO Division took several actions to streamline the process and increase registrations. This included moving an employee from the Biosolids Division to temporarily perform registrations on renewals, reducing staff site visits for no-land AFOs, publishing public notices on the Department's website (to save delivery time to libraries per AFO regulations), combining public hearings to cover more than one AFO, pro-actively scheduling public hearings for new constructions and expansions of existing AFOs in Wicomico, Somerset and Worcester Counties and prioritizing new constructions and expansions of existing AFOs.

Animal Feeding Operations

Natural Wood Waste Recycling

PURPOSE

The Solid Waste Program (SWP) issues Natural Wood Waste (NWW) Recycling permits to ensure that NWW is managed in a manner that will not cause harm to the public health and the environment. Recycling is conducted by chipping the wood waste (stumps, root mat, branches, logs and brush) and converting into products including mulch and compost. The permitting system was designed to prevent large-scale fires at NWW facilities.

Natural wood waste facilities were targeted for additional inspections in FY 2003 and FY 2004 after several severe fires at this type of facility in FY 2002.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17; COMAR 26.04.

PROCESS

Permits are required for the operation of facilities that recycle NWW (stumps, root mat, branches, logs, and brush). NWW activities are authorized by a General Permit or Individual Permit. Permits are not required for these kinds of operations at landfills, for these operations if they are performed by an individual or business to recycle their own wood wastes on their own premises, or for wood waste recycling operations performed by a government or non-profit agency. Routine unannounced inspections are performed at these facilities several times a year to ensure compliance with the permit, as well as investigating citizen complaints. If violations are found, corrective actions are required in accordance with the Department's guidelines and procedures.

SUCSESSES/CHALLENGES

In FY 2016, the SWP's Compliance Division's overall inspection coverage decreased from 98% in FY 2015 to 88% in FY 2016. The number of significant violations increased from 36 in FY 2015 to 52 in FY 2016. The SWP's Compliance Division was again able to increase the total number of inspections, audits and spot checks from 186 in FY 2015 to 201 in FY 2016. Additionally, a total of 10 site complaints were issued in FY 2016.

* Number of inspected sites includes permitted facilities, government facilities that do not require permits, unpermitted natural wood waste operations and citizen complaints.

** Coverage rate is computed as the total number of sites inspected and dividing that by the total number of permits/licenses in effect plus the number of unpermitted sites discovered and inspected.

Natural Wood Waste Recycling

Mining – Coal

PURPOSE

Federal law requires that a person obtain a permit in accordance with the federal Surface Mining Control and Reclamation Act (SMCRA) to mine coal anywhere in the United States. The purpose of the Act was to establish a nationwide program to protect the public and the environment from the adverse effects of surface coal mining operations. In Maryland, the Department is authorized by the federal Office of Surface Mining to administer a surface mining control program consistent with the federal law. The Bureau of Mines Division is responsible for processing, reviewing and issuing all permits and enforcing all laws and regulations enacted by the State related to coal mine operations. These operations include extraction of coal by surface or underground mining methods, processing and loading coal after extraction, recovering coal from coal refuse piles left by previous coal mining operations, and prospecting for coal.

AUTHORITY

FEDERAL: P.L. 95-87 Surface Mining Control and Reclamation Act of 1977
STATE: Environment Article, Title 15, Subtitle 5 and 6; COMAR 26.20

PROCESS

Persons wanting to obtain a coal mining operations permit must file an application which includes maps, plans and designs detailing how the operation is to be conducted and evaluations of potential environmental impacts that could result from the operations. The Bureau of Mines Division reviews the designs and environmental evaluations and solicits comments on the proposed operations from the general public through public notifications and from government agencies through direct notification. If the Bureau of Mines Division finds the application is in compliance with program requirements a permit will be issued. The applicant is required to post a bond sufficient to assure reclamation of the site in the event the permittee fails to do so.

Permitted operations are inspected, at a minimum, twelve times per year for compliance with the plans contained in the permit application, conditions of the permit, and State coal mining laws and regulations. Permitted operations are also required to submit on a regular basis monitoring data for surface and ground water quality, data related to blasting, coal production, and progress reports relating to reclamation of the sites. This submitted data is reviewed for regulatory compliance.

Coal mining operations are required to reclaim the land to a condition similar to what existed prior to mining. Areas disturbed by the operations must be regraded to a similar shape and aspect as existed pre-mining and vegetated with diverse permanent species of plants that will stabilize the soil, prevent erosion, and support the intended post-mining use of the land. The bond posted for the permit will not be released for five years following completion of the mining operations, during which time the site will continue to be inspected and reclamation success evaluations will be performed by the Bureau of Mines Division and the Maryland Land Reclamation Committee (LRC). The LRC is a group established by law comprised of government, industry, and private citizen representatives who, among other duties, are charged with evaluating the success of reclamation on individual surface mine permits and without whose approval the bond cannot be released.

In addition, the Abandoned Mine Lands Division carries out the reclamation of pre-law areas mined prior to 1977, which were not adequately reclaimed. These reclamation activities improve the quality of the environment, increase the beneficial use of the land and water resources and eliminate any dangers to public health and safety. Projects are selected from an inventory of documented sites developed by the Bureau of Mines Division and approved by the Federal Office of Surface Mining.

SUCSESSES/CHALLENGES

The Mining Program met 100% of all legally-mandated inspection frequencies in FY 2016. State capital funds were used to evaluate site conditions and impacts to streams in preparation for projects in George's Creek and Jennings Run watersheds. Work to improve quality in Winebrenner Run by addressing acid mine drainage was completed in FY 2016.

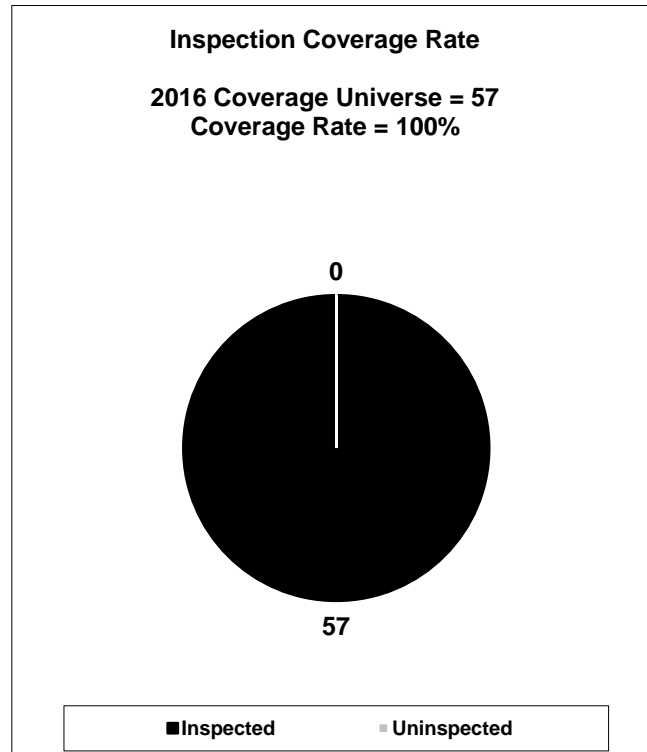

Using Federal Abandoned Mine funds provided by SMCRA, projects were completed that sealed several open mine portals, extended a public water line, reclaimed a coal refuse site and eliminated mine drainage from impacting a home. Several other projects are currently underway to stabilize two landslides associated with old mine sites, improvements to a municipal storm drainage system impacted by mine drainage and the reclamation of two small abandoned mine sites.

The Bureau of Mines Division completed a review of all active sites requiring a bond to ensure that reclamation work will be completed. The Bureau of Mines Division will continue to monitor the reclamation liability at each site and adjust the bonds as necessary to ensure funding to reclaim a site should the operator vacate the site without fully reclaiming it. Vindex Energy was a major permittee for coal mining in Maryland. Vindex has declared bankruptcy. The Bureau of Mines Division has closely monitored all Vindex sites to assure that all required reclamation will be done. Work is progressing well to date.

Mining – Coal

Mining – Non-Coal

PURPOSE

The extraction of minerals is a basic and essential activity for the economic well being of the State and nation. This activity must be balanced against potential safety and environmental effects. The mining permit review evaluates possible impacts on surrounding properties, the local environment and the public safety impacts of the operation. Other impacts such as historical resources and habitat protection are reviewed as well. Each site is bonded to ensure compliance with the permit.

AUTHORITY

STATE: Environment Article – Title 15, Subtitle 8; COMAR 26.21

PROCESS

Upon issuance of a permit the site is assigned an inspection frequency. This frequency can be adjusted at any time based on site conditions and workload. All water quality permits, wetland, waterway and sediment approvals are inspected as part of the mine permit inspection.

The Department does not have statutory authority to collect administrative penalties for non-coal mining permits but violations of other media associated with mining may be penalized as warranted. Mining laws do provide for civil and criminal penalties.

Improperly maintained environmental controls have the potential to degrade water quality through the transport of sediment-laden water from drainage and stormwater runoff, and can adversely impact the aquatic habitat. The program evaluates mining practices, reclamation and stormwater management for compliance to ensure that adverse impacts to surface and groundwater are minimized.

SUCSESSES/CHALLENGES

The Minerals, Oil and Gas Division has worked closely with mine operators who have on occasion produced non-compliant discharges. Increased inspection frequency and detailed investigation have resulted in improved and ongoing compliant discharges. Some of the sites include the Bridgeville operation of Shore Sand and Gravel and the Texas Quarry operated by Bluegrass materials. After multiple meetings with the Minerals, Oil and Gas Division, Shore Sand and Gravel invested in a new pre-treatment flocculent system and dredging operation to improve the discharge to Mason's Branch, a tributary of the Tuckahoe River. Bluegrass Materials made significant investments to improve the discharge at the Texas Quarry in Baltimore County. The Minerals, Oil and Gas Division will continue to work closely with the Mining Industry to ensure compliant operations and will invest time and resources to work with the industry to make improvements where possible.

Mining – Non-Coal

Oil and Gas Exploration and Production

PURPOSE

In the State of Maryland, drilling and operations of gas or oil wells, operations of a natural gas storage facility and oil and natural gas exploration using seismic operations require a permit. Permits include environmental controls to ensure public safety, provide protection of public and private property and minimize the impacts resulting from the operation.

AUTHORITY

STATE: Environment Article - Title 14, Subtitles 1, 2 and 3; COMAR 26.19.

PROCESS

Sites are assigned an inspection frequency during issuance of a permit, license or authorization. Routine inspections of the facilities are scheduled in accordance with the assigned priorities and may be adjusted to reflect changes in workloads or inspection priorities. The inspector assesses compliance with permit conditions and determines if corrective action may be required. During active drilling operations the frequency of inspection is higher compared to when the well is completed.

SUCCESSSES/CHALLENGES

Legislation passed in 2015 created a two-year moratorium on any new drilling and operating permits for gas or oil. The Minerals, Oil and Gas Division has developed a series of issue-related papers that detail possible changes to the previously-proposed regulations that were subsequently withdrawn. A series of statewide meetings were held on the issue papers and public comments have been received. The Minerals, Oil and Gas Division will consider the comments in the drafting of regulations to be submitted in the fall of 2016. The moratorium will continue until 2017 by which time the new regulations would become effective. There are no active permit applications pending.

Oil and Gas Exploration and Production

Mercury Switch Recovery

PURPOSE

Manufacturers of vehicles with mercury switches are required to develop and implement a “mercury minimization plan” that will assist vehicle recyclers and scrap processing facilities in removing mercury-containing switches from vehicles. Vehicle recyclers and scrap processing facilities are required to remove all mercury switches or mercury switch assemblies identified in the approved mercury minimization plan, except where a mercury switch or mercury switch assembly is inaccessible due to vehicle damage. In addition, these facilities and vehicle manufacturers must adhere to the approved mercury minimization plan with respect to the collection, storage, transportation, recycling, and handling of mercury switches and mercury switch assemblies upon removal from vehicles. Vehicle recyclers and scrap processing facilities must register with the End-of-Life Vehicle Solutions (ELVS) Program, which carries out the mercury minimization plan on behalf of vehicle manufacturers. The mercury switch program ensures that mercury auto switches and switch assemblies are removed from scrap vehicles and managed appropriately through the manufacturer collection program, preventing release of mercury to the environment.

Enforcement actions may be taken to ensure that vehicle recyclers and scrap processing facilities have registered with ELVS, are removing mercury switches and switch assemblies in compliance with the mercury minimization plan, and are keeping records required by statute.

AUTHORITY

STATE: Environment Article, Title 6, Subtitle 9.

PROCESS

Vehicle recyclers and scrap processing facilities must register with the ELVS Program and remove mercury switches and switch assemblies as described in the mercury minimization plan prior to processing the vehicle. The removed switches and switch assemblies are then returned in buckets provided by ELVS with pre-paid shipping. Vehicle recyclers and scrap processing facilities are required to maintain electronic records for 3 years, documenting the number of mercury switches and mercury switch assemblies collected, the number of end-of-life vehicles containing mercury switches, and the number of end-of-life vehicles processed for recycling. Any vehicle damage must also be noted in the normal business records of the vehicle recycler that delivers an end-of-life vehicle to a scrap processing facility.

The Resource Management Program (RMP) uses the ELVS database to determine which facilities have registered under the ELVS Program and whether those facilities have submitted any switches to ELVS. RMP conducts inspections of vehicle recyclers and scrap processing facilities to determine whether switches are being removed and to notify facility operators of the need to register and/or remove switches. Electronic records are also inspected to ensure they are being kept in compliance with the law. Penalties and corrective actions are used to address violations of the mercury switch requirements.

SUCSESSES/CHALLENGES

Since the beginning of the program in 2007, 76,374 switches have been collected, which equates to 168.02 pounds of mercury collected to date. The program was voluntary until 2009.

As of the end of FY 2016, 150 active vehicle recyclers and scrap processing facilities were registered with the ELVS program. All of these facilities were registered in prior fiscal years, so there were no new registrations during FY 2016 (registration with the ELVS Program lasts indefinitely and does not need to be renewed). In FY 2016, RMP inspected 125 vehicle recyclers and scrap processing facilities. RMP is coordinating mercury switch recovery inspections with LMA's scrap tire inspections to address any scrap tire licensing issues that may exist at these facilities. During FY 2016, there were no administrative enforcement actions taken during any inspections as facilities were in compliance with Maryland's Mercury Switch Law.

Vehicle manufacturers pay the vehicle recyclers and scrap processing facilities a bounty of \$4 or \$6 per switch recovered. The law also requires vehicle manufacturers to pay the State \$1 per switch recovered. This has been a challenge because the manufacturers only pay the State for switches accompanied by ELVS-required documentation that is complete and accurate. As of May 31 2016, the State had received \$5,798 in payments from ELVS in FY 2016, which is a decrease from FY 2015. There is a 60-90 day delay for reimbursement of funds to the State. Some vehicle recyclers or scrap processing facilities do not consider the bounty to be worth the burden of filling out the ELVS-required documents. Since the switch bounty is considered income for tax purposes, some participants may also forego the bounty so as not to further complicate their tax filings.

Another challenge is that participants are frequently slow to turn in switches they have collected. RMP's outreach efforts will continue to encourage the timely shipment of switches.

The electronic record-keeping requirement of the statute continues to be a difficult requirement for some facilities. While many of the vehicle recyclers and scrap processing facilities are large with sophisticated inventory control, others are small operations with limited computer capability.

FY 2016 marks the end of mercury-only inspections by RMP. Going forward, mercury switch inspections will only be performed in conjunction with scrap tire inspections. Facilities that fall under the scope of Maryland's mercury switch recovery program are still required to remove mercury switches from end-of-life vehicles in compliance with the requirements of the program. Maryland's Mercury Switch Law sunsets on December 31, 2017.

Mercury Switch Recovery

Electronics Recycling

PURPOSE

The Maryland Statewide Electronics Recycling Program (MSERP) regulates the manufacturers and retailers of Covered Electronics Devices (CEDs). A CED is a computer or video display device with a screen that is greater than 4 inches measured diagonally. This includes computers, computer monitors, televisions, portable DVD players, cell phones, tablets, etc. A CED does not include a video display device that is part of a motor vehicle or that is contained within a household appliance or commercial, industrial, or medical equipment. Manufacturers of CEDs that intend to sell these devices in Maryland are required to register with the Maryland Department of the Environment and pay a registration fee. The fee, which is paid annually, is based on the number of CEDs the manufacturer sold in Maryland during in the previous year, as well as whether the manufacturer has a Department approved CED takeback program. To qualify, the takeback program must meet certain requirements, such as provision of a free method for consumers to return the manufacturer's CEDs for recycling and a method for consumers to remove personal data from CEDs prior to return for recycling (if applicable). Both manufacturers and retailers are prohibited from selling or offering for sale CEDs in the State unless the manufacturer of those CEDs is registered with the Department.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 17.

PROCESS

Each manufacturer of a qualifying CED must complete and submit a registration form with the proper accompanying registration fee to the Department by the annual submission deadline of March 1st. The Department tracks registrations and payments submitted by manufacturers of CEDs. The annual registration is valid until the last day of February the following year (e.g., registrations due March 1, 2016 are valid until February 28, 2017).

The annual registration fee is determined based upon the number of CEDs sold by a manufacturer in Maryland the previous year (e.g., the 2016 registration fee is based upon 2015 sales data) and whether or not the manufacturer has a Department approved CED takeback program. Industry sales data, purchased by the Department, is used to verify the quantity of CEDs sold and reported to the Department by each manufacturer via the annual registration form. The Department also reviews and approves or denies manufacturer takeback programs.

A list of registered manufacturers is generated and posted on the Department's website. The listings for manufacturers with an approved takeback program are hyperlinked and/or are accompanied with a toll-free phone number to be used by customers to obtain details on a manufacturer's takeback program.

The Department inspects CED manufacturer web pages, brick-and-mortar stores, and web based retailers to determine manufacturer compliance with the MSERP. The Department primarily focuses on retail enforcement actions (retailers are prohibited from selling unregistered brands in Maryland) to bring CED manufacturers into compliance with the

MSERP. Penalties and corrective actions are available to ensure compliance with the MSERP.

SUCSESSES/CHALLENGES

In FY 2016, all manufacturers selling their unregistered CEDs in Maryland and identified through the retailer inspections, registered their brands after being notified by a retailer. Of the 114 registered manufacturers, 87% registered by the March deadline. This shows the effectiveness of the registration process in conjunction with the retailers' inspections. In FY 2016, the Department again purchased national electronic manufacturer sales information. This has allowed for faster and more accurate review of manufacturer registration forms and has allowed the Department to verify registration fees paid by several manufacturers, leading to recovery of additional owed fees.

Because manufacturer registrations are issued throughout the year and a fiscal year (July – June) spans two registration years (March – February), the number of registrations issued during a fiscal year may vary from the number that are in effect at the end of that fiscal year. This explains why 136 annual registrations were issued during FY 2016 and only 114 were in effect as of the end of that fiscal year.

As a result of the Department's outreach and enforcement efforts, all brick-and-mortar electronics retailers were in compliance with the MSERP at the end of FY 2016. In FY 2016, the Department inspected slightly more retailers (347) than in FY 2015 (345). The inspection coverage rate increased to 41% from 36% in FY 2015. The number of total number of inspections decreased during FY 2016 to 353 from 360 due to fewer follow up inspections. During FY 2016, 36 site complaints were issued in comparison with 70 in FY 2015.

WATER MANAGEMENT ADMINISTRATION

Water Management Administration Executive Summary

The Water Management Administration (WMA) has inspection and enforcement responsibilities for the water quality and resource conservation programs that follow in this report. The Compliance Program is responsible for compliance associated with state groundwater discharges, federal and state surface water discharges, pretreatment, erosion and sediment control for construction activity, waterway construction, and tidal and non-tidal wetlands. The Water Supply Program (WSP) is responsible for public drinking water and water appropriation and use permit compliance, and the Sediment, Stormwater and Dam Safety Program (SSDSP) is responsible for dam safety compliance.

WMA's Compliance Program inspects sites for compliance with numerous laws, regulations and permits or other authorizations addressing wastewater discharges, surface water and groundwater pollution, stormwater discharges and erosion and sediment control, tidal and nontidal wetlands, and waterway construction. As a result, many of the enforcement cases may address numerous categories of violations and injunctive relief. The Compliance Program works to continuously improve the accuracy of databases that track its activities. This effort may result in periodic adjustments to the data that capture greater accuracy rather than an actual change in compliance activities. Where appropriate, significant changes due to data management improvements will be noted.

Prioritizing inspections with the current number of enforcement personnel continues to be a challenge. All people holding general permits for stormwater associated with construction activities are required to inspect their sites for erosion and sediment controls weekly and after every major storm event. Thirteen county governments and 10 municipalities are delegated erosion and sediment control enforcement authority for these projects and perform inspections of projects in their jurisdictions. The Compliance Program adjusted its erosion and sediment control inspection priorities in February 2013 which shifted the focus to large construction sites. Larger sites take longer to inspect and may hold multiple Agency permits, which may translate to fewer sites visited, but their impact when in noncompliance can be much greater than small sites. During FY 2016, the Compliance Program had a contractual employee assigned to perform inspections at industrial stormwater sites in Maryland in accordance with an EPA grant.

The Sediment, Stormwater, and Dam Safety Program (SSDSP) is responsible for reviewing and approving erosion and sediment control and stormwater management plans for State and federal construction projects and has seen an increase in best management practice (BMP) retrofit project submissions in the last year. This has placed additional burden on existing staff and continues to be a challenge. However, over the course of the last year, SSDSP completed the transfer of sediment control and stormwater management plan review and approval authority to the State Highway Administration (SHA) and the Maryland Transit Administration (MdTA). Currently, all new construction projects undertaken by these agencies will be reviewed and approved by SHA and MdTA. This will allow SSDS staff to concentrate on new development projects from all other State and federal agencies.

SSDSP is also responsible for administering Maryland's Dam Safety Program. This involves issuing permits and inspecting new dam construction and maintenance and repair

of existing structures. The State's current inventory contains 548 dams, 65 of which are breached and not inspected on a regular basis. A total of 644 permits have been issued for Maryland's inventory. This amount includes the number of new dams built and the total number of maintenance and repair permits issued. A significant compliance concern for SSDSP is that more than 30 of Maryland's high-hazard and significant hazard dams lack current Emergency Action Plans (more than three years old), which are critical for storm preparedness and public safety. Unfortunately MDE lacks the authority to compel regular updating and submission of these plans for many dams.

Staff additions to SSDSP over the last year have eased the workload of the existing Dam Safety Division (DSD) personnel. A division chief was hired in March 2015, filling a critical management vacancy that existed for four years. Additionally, another engineering vacancy was filled and workloads are being redistributed among all staff. An additional engineer was hired in September 2016. The DSD also helped provide guidance to soil conservation districts and county stormwater management agencies regarding dam safety implications of small pond and embankment retrofit projects. It is hoped that this will decrease the number of small pond reviews that the DSD performs and allow staff to concentrate on larger structures.

The mission of the Water Supply Program (WSP) is accomplished through planning and permitting for water withdrawal, protection of water sources that are used for public water supplies, oversight and enforcement of routine water quality monitoring at public water systems, regular on-site inspections of public water systems, review of design plans for new or upgraded water treatment, and prompt response to water supply emergencies.

In FY 2016, Maryland continued implementation and enforcement of the Safe Drinking Water Act (SDWA) for all public water systems (PWS) in Maryland in accordance with the most recent primacy the Department has received. To assist PWS with meeting the compliance requirements of the rules, WSP provided training and on-site technical assistance throughout the State. It is expected that even with the additional assistance from the WSP, the systems with limited resources will encounter challenges in the implementation of the most recent regulations in the first couple of years after the rules become effective; this is generally seen as an increase in the number of technical violations. During this fiscal year, the Program experienced retirements and turnover. As a result of these vacancies, the program had to prioritize to meet its routine non-primacy-related goals and deadlines. However, the Program's commitment to compliance assistance remained intact. During this period, the compliance rate for PWSs in Maryland improved in comparison to the previous year.

For FY 2016, additional challenges that stretched staff resources were heightened scrutiny and concerns about lead in drinking water as a result of the lead problems in Flint, Michigan, legionella outbreaks in a high-rise condominium building in Ocean City, and emerging contaminants such as perfluorinated compounds (PFOS and PFOA).

During FY 2016, WSP worked with permittees whose Water Appropriation and Use Permits (WAP) were expired and those who had failed to comply with their water usage reporting requirements to bring them into compliance. Larger public water systems conduct water audits and submit water loss plans to reduce unaccounted for water. Reviews of the audits showed that many systems need to devote additional resources into reducing the amount

of unaccounted-for water. Notices of Violation were sent to permit holders with outstanding reporting requirements, expired permits, and those who used water in excess of their permitted allocation.

Discharges – Groundwater (Municipal & Industrial)

PURPOSE

Excessive nutrients, bacteria, and industrial pollutants in wastewater have the potential to impact the quality of groundwater. The groundwater discharge permitting process provides a means of managing these impacts through monitoring, inspection and enforcement. The Wastewater Permits Program issues groundwater discharge permits to control the disposal of treated municipal or industrial wastewater into the State's groundwater via spray irrigation or other land-treatment methods such as subsurface discharge. Upon permit issuance, the Compliance Program is responsible for inspections and compliance assurance. Groundwater discharge permits establish pollutant discharge limits and require the permit holder to meet self-monitoring, record-keeping, and reporting requirements to protect public health and minimize groundwater pollution.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with groundwater discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or are in violation based on failure to perform required self-monitoring and reporting, or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of Discharge Monitoring Reports (DMRs). DMRs are reviewed in the office and at the facilities in order to determine whether the facility is in compliance with applicable requirements. DMR reviews are shown in the following table on the line identified as "Inspections, Audits, Spot Checks." DMR reviews are not included in the determination of the inspection coverage rate.

SUCCESSSES/CHALLENGES

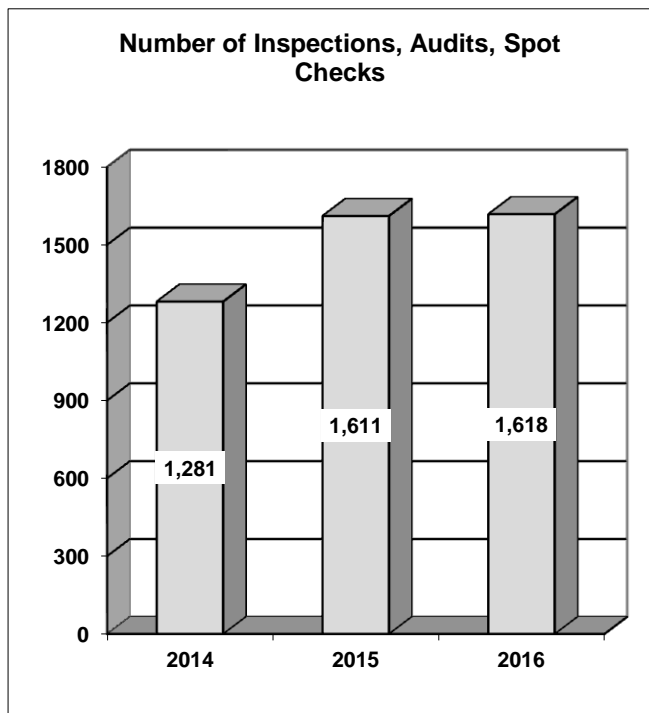

WMA continues to investigate and pursue enforcement cases to address groundwater pollution. WMA works with the Attorney General's Office on enforcement cases to address groundwater pollution concerns.

Discharges – Groundwater (Municipal and Industrial)

Discharges - Surface Water (Municipal & Industrial) State and NPDES Permits

PURPOSE

The federal Clean Water Act's National Pollutant Discharge Elimination System (NPDES) Program controls water pollution generated from a wide variety of sources including industrial activities, sewage treatment plants, certain agricultural activities and stormwater runoff from industrial, municipal and agricultural sources. All industrial, commercial or institutional facilities that discharge wastewater, including stormwater from certain industrial facilities, directly to surface waters of Maryland need a permit. Permit holders include local, state, and federal government agencies, as well as privately-owned treatment systems.

The NPDES permit system includes a stormwater component to control pollution generated from runoff associated with certain industrial sites, municipal storm sewer systems, construction activities, and concentrated animal feeding operations. Eleven categories of industry, and storm sewer systems operated by certain government agencies, are required under the Clean Water Act to have their stormwater discharges covered under an NPDES permit. For any construction activity that disturbs one or more acres, coverage must be obtained under MDE's general and individual NPDES permits for construction activity. These permits require developers to perform self-inspection and record keeping to ensure that sediment and erosion control measures are maintained and functioning in accordance with approved plans to prevent water pollution and stream bank erosion caused by excess erosion, siltation, and stormwater flows from construction sites.

Surface water discharge permits may combine all applicable State and NPDES requirements into one permit for facilities that discharge to State surface waters. The permit is designed to protect water quality in the water receiving the discharge.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Compliance Program performs inspections of sites with surface water discharge permits as part of its overall inspection priority scheme, with priority given to sites that are the subject of complaints or in violation based on failure to perform permit required self-monitoring and reporting or due to violations of the effluent limitations in the permit. The inspector may conduct unannounced inspections and may collect samples for independent laboratory analysis as necessary to verify compliance with permit limits. Self-monitoring results are filed at the frequency specified by the permit (usually monthly or quarterly) in the form of Discharge Monitoring Reports (DMRs). DMRs are reviewed in the office and at the facilities in order to determine whether the criteria for "Significant Noncompliance" have been met. DMR reviews performed by the Compliance Program's Enforcement Division are included in the following Table on the line identified as "Inspections, Audits, Spot Checks." DMRs were reviewed for all permitted sites that require DMR submittals as a part of their permit.

SUCSESSES/CHALLENGES

WMA is actively pursuing hundreds of cases involving surface water pollution. The Compliance Program inspects sites to check for compliance with numerous laws, regulations and permits or other authorizations addressing wastewater discharges, surface water and groundwater pollution, stormwater discharges and erosion and sediment control, tidal and nontidal wetlands and waterway construction, so many of the enforcement cases address numerous categories of violations and injunctive relief.

* This number includes new permits, renewals, and conversions/modifications of permits.

Discharges – Surface Water (Municipal & Industrial) State and NPDES Permits

Discharges – Pretreatment (Industrial)

PURPOSE

The Pretreatment Program is responsible for regulating wastewaters from industrial and other non-domestic sources discharged into publicly-owned treatment works (POTW). The Pretreatment Program seeks to prevent the discharge of toxic or corrosive discharges to the collection systems serving POTWs that may result in process upsets and failure of critical infrastructure. In accordance with its authority as delegated by EPA, MDE oversees 20 local pretreatment programs that are responsible for 180 industrial sources. In addition, pretreatment permits are issued directly to five industries discharging to non-delegated POTWs. Local pretreatment program responsibilities include issuing discharge permits to industrial users, conducting industrial inspections and performing compliance monitoring, developing and enforcing local limits, enforcing federal pretreatment standards, and assessing penalties against industrial users. These requirements are included in a delegation agreement, which is signed by the operator of the POTW and WMA, and incorporated by reference into the NPDES permit issued by WMA. Local governments are responsible for issuing penalties and enforcement actions associated with this program; therefore, those numbers are not reflected in WMA's enforcement statistics.

AUTHORITY

FEDERAL: Clean Water Act

STATE: Environment Article, Title 9, Subtitle 3; COMAR 26.08

PROCESS

The Pretreatment Program oversees local pretreatment program implementation. This oversight is performed by the permitting program staff by conducting pretreatment compliance inspections of pretreatment programs; audits of pretreatment programs; joint review of industrial user permits; independent and joint industrial inspections with the POTW; review of quarterly status reports from the delegated POTWs; and initiation of enforcement actions when the POTW fails to act in accordance with its delegated responsibilities. The Pretreatment Program also issues permits to categorical industrial users discharging to wastewater treatment plants in areas of the state without delegated pretreatment programs. Compliance of these industrial users is tracked by review of periodic compliance reports and the results of annual inspections.

WMA oversees delegated pretreatment programs and takes enforcement action when needed to support the proper treatment of industrial discharges to wastewater collection and treatment systems to prevent damage to the treatment processes or infrastructure and pass through of pollutants to waters of the State.

The Pretreatment Program currently issues permits to categorical industrial users located in areas not serviced by jurisdictions with delegated pretreatment programs. In addition it provides oversight to 20 delegated pretreatment programs with technical and regulatory assistance. The Pretreatment Program also performs inspections at several industrial users that are permitted by local delegated pretreatment programs. The inspection coverage rate includes these industrial users as well as the entities directly permitted by WMA.

SUCSESSES/CHALLENGES

The Program is responsible for inspecting the permittees, the POTWs and only some of the industrial users permitted by the delegated POTWs. The Program is required by statute to provide a 100% coverage rate of those facilities. In FY 2016, the program successfully met that requirement.

* These are State-permitted industries subject to Categorical Pretreatment Standards under U.S. EPA regulations 40 CFR 403.6 and 40 CFR Chapter I, Subpart N.

** Coverage rate is defined as the number of sites inspected divided by the sum of permits/licenses in effect, the POTWs and the significant industrial users.

Discharge – Pretreatment (Industrial)

Stormwater Management and Erosion & Sediment Control for Construction Activity

PURPOSE

The purpose of the erosion and sediment control program is to lessen the impact to the aquatic environment caused by sediment leaving construction sites. The purpose of the stormwater management program is to reduce stream channel erosion, pollution, siltation, and local flooding caused by land use changes associated with urbanization, by maintaining, after development, the pre-development runoff conditions. Any construction activity in Maryland that disturbs 5,000 square feet or more of land or results in 100 cubic yards or more of earth movement must have approved erosion and sediment control and stormwater management plans before construction begins.

AUTHORITY

FEDERAL: Clean Water Act, Section 402; 40 CFR

STATE: Environment Article, Title 4, Subtitle 1 and Subtitle 2; COMAR 26.17

PROCESS

Inspection and enforcement authority for erosion and sediment control has been delegated or partially delegated to 14 counties, and eight municipalities and the Washington Suburban Sanitary Commission (WSSC) by the state. MDE inspections cover construction projects in non-delegated counties and State and federal projects. This report does not reflect the erosion and sediment control inspection and enforcement activities conducted by local governments in delegated jurisdictions.

Stormwater management approval for all non-state and non-federal projects is, by law, the responsibility of each local jurisdiction. MDE inspections of stormwater management facilities are performed for State and federal projects only. Upon issuance of a permit or authorization [whether by WMA's Sediment, Stormwater and Dam Safety Program (SSDSP) or by the local sediment control approval authority], a project file is transferred to the Compliance Program where an inspection priority is assigned. Routine inspections are scheduled based on the assigned priority and as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand.

Stormwater and Erosion and Sediment Control are combined into one table because at the State level these projects are reviewed and approved as one project. For State and federal projects, plan review is performed by SSDSP and inspections are performed by the Compliance Program. All other projects are reviewed at the local level, and if delegated, inspected at the local level. In non-delegated jurisdictions, the MDE Compliance Program performs sediment control inspections.

Inspections performed related to an NPDES permit for the discharge of stormwater associated with construction activities are included in the table for surface water discharges.

SUCCESSSES/CHALLENGES

Inspections remain a priority and the Compliance Program prioritize inspections with the current number of inspectors. WMA focuses on large construction sites in non-delegated

areas and State and federal projects, along with sites brought to MDE's attention by citizen complaints. The Compliance Program adjusted its erosion and sediment control inspection priorities in February 2013, which shifted the focus to large construction sites. Larger sites take longer to inspect, which translates to fewer sites visited, but their impact when in noncompliance can be much greater than small sites.

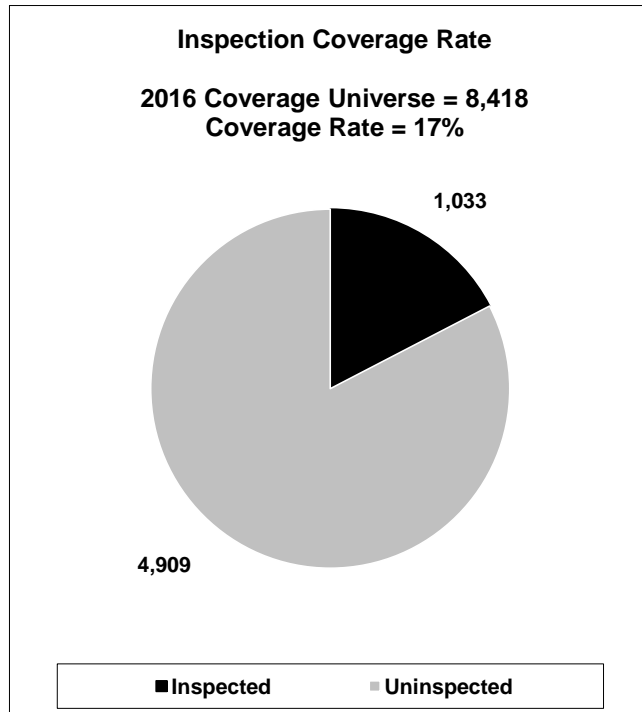

As in previous years, the Allegany, Caroline, Frederick, and Queen Anne's Soil Conservation Districts continued to perform Erosion and Sediment Control inspections on behalf of MDE under Memoranda of Understanding. These districts are independent of county government. The numbers of sites inspected and numbers of inspections on the following table only include MDE's activities.

The Compliance Program has undertaken an extensive file review project to ensure expired and completed projects are removed from the Program's list of approvals in effect. This has resulted in a significant decrease in the number of sediment approvals reported as in effect in this year's report when compared with the FY 2015 report.

Stormwater Management and Erosion & Sediment Control for Construction Activity

Performance Measure			TOTAL
PERMITTED SITES/FACILITIES			
Number of approvals issued			228
Number of approvals in effect at fiscal year end			5,942

Stormwater Management and Erosion & Sediment Control for Construction Activity

Water Supply Program

PURPOSE

The mission of the Water Supply Program (WSP) is to ensure that public drinking water systems provide safe and adequate water to all current and future users in Maryland, and that appropriate usage, planning, and conservation policies are implemented for Maryland's water resources. This mission is accomplished through proper planning for water withdrawal, protection of water sources that are used for public water supplies, oversight and enforcement of routine water quality monitoring at public water systems, regular on-site inspections of water systems, review of design plans for new or upgraded water treatment, and prompt response to water supply emergencies. In addition to ensuring that public drinking water systems meet federal and State requirements under the Public Water System Supervision program, WSP also administers the wellhead/source protection program, and issues Water Appropriation and Use Permits for both public and privately owned water suppliers, and thousands of other entities withdrawing water for agricultural, industrial or commercial purposes statewide. In addition, the Program certifies laboratories that analyze water samples and issues licenses for water samplers. The Program also oversees the Board of Water and Wastewater Systems Operators, as well as the Board of Well Drillers. Because all of these activities reside together in WSP, Maryland has the unique opportunity to evaluate and regulate public drinking water systems from a broad perspective that includes an evaluation of the resource for both quantity and quality. WSP's comprehensive approach ensures safe and adequate drinking water for over five million Marylanders, while protecting the sustainability of water resources for present and future Marylanders.

Community and Non-Transient Non-Community Water Systems

WSP regulates approximately 1,005 community water systems (including municipal, county, and private systems), and non-transient non-community water systems (such as businesses, schools, and day care facilities that have their own water source). These systems must test for over 90 regulated contaminants on schedules that vary based on water source, system type and population.

Transient Non-Community Water Systems

In addition, there are approximately 2,297 transient non-community water systems (such as rest areas, gas stations, campgrounds, and restaurants with their own water source) throughout the State, which are regularly inspected and tested for acute contaminants. Since 1998, WSP has negotiated delegation agreements with county health departments for enforcement of Safe Drinking Water Act regulations for the transient non-community water systems. Seventeen of the twenty-three counties have accepted delegated authority for these systems, and WSP directly enforces the requirements for the six remaining counties. In FY 2016, Anne Arundel and Charles counties rescinded their delegated programs.

Drinking Water Laboratory Certification

This program is mandated by the federal Safe Drinking Water Act. The certification assures the reliability of the compliance samples that are analyzed by State-certified laboratories. Providing high quality data is critical to evaluating public water systems, and is the primary means of evaluating the safety of the drinking water supplies. The

laboratories that are certified under this program are also used by the county health departments and other MDE programs to analyze drinking water for private wells, and for investigation of underground storage tanks.

Water Appropriation and Use Permits

In order to conserve and protect the State's water resources, WSP regulates water withdrawals and diversions through a permitting system. Water uses for most purposes, including public supply, business, institutional, subdivision of land, or agricultural use over 10,000 gallons per day (gpd), require a permit. Groundwater users of 5,000 gpd or less may file for a Notice of Exemption in lieu of obtaining a permit unless the use is by a community water system, or within a designated water management strategy area. Maryland regulates water use under the doctrine of reasonable use, which means the quantity must be reasonable for its intended purpose, and the impacts of the use to the natural resources of the State must not be unreasonable.

Board of Waterworks and Waste Systems Operators

In order to protect the quality of water in Maryland, protect public health and prevent pollution, WSP oversees a state-wide certification program. Certification helps to protect public health and the environment by setting minimum education, experience, and examination standards that applicants must satisfy. Operators and/or superintendents of water treatment plants, water distribution systems, wastewater treatment plants, wastewater collection systems, certain pretreatment facilities that discharge to sanitary sewers, and industrial wastewater facilities are required to be certified.

Board of Well Drillers

As part of Maryland's strategy to assist in the orderly development and protection of its groundwater resources, the State Board of Well Drillers was created in 1968. The Board of Well Drillers is responsible for regulation of all those who engage in the practice of well drilling in their own and the public interest. The Board sets standards and administers qualifying examinations to license individuals who drill water supply and geotechnical wells, or install water pumps or water conditioning equipment. The practice of well drilling includes engaging in any of the following activities for profit: (1) Making, altering, repairing or sealing a well; or (2) Installing, altering, repairing or disconnecting well system equipment.

Community and Non-Transient Non-Community Water Systems

WSP uses a multiple-barrier approach to ensure that public drinking water systems in Maryland are able to provide a safe and adequate supply of drinking water to their consumers. This approach includes review and approval of potential water sources and construction plans; evaluation of a new system's technical, financial, and managerial capacity; regular inspection of drinking water facilities; close oversight of water quality monitoring; and ensuring licensed operators are employed by water treatment facilities.

Public water systems are required to conduct routine sampling of their water quality. The type and frequency of analysis depend on the type of system, its population, and the vulnerability of its water supply. WSP reviews and evaluates more than 30,000 water quality records each year. Emphasis is placed on preventive measures to avoid serious public health incidents. The vast majority of drinking water violations are corrected immediately, or following the issuance of a Notice of Violation. Systems must notify their consumers when violations of the Safe Drinking Water Act occur.

Transient Non-Community Water Systems

Seventeen of the twenty-three counties are delegated responsibilities from WSP for transient non-community water systems. These counties conduct routine inspections and ensure that systems are monitored in accordance with State and federal requirements. Transient non-community water systems are required to monitor only for contaminants that have acute health risks, including nitrate, nitrite, and bacteria. In addition to providing funding, WSP provides guidance and training to the counties, and reports health-based violations to EPA for these systems. WSP conducts evaluations on all new public drinking water wells to determine whether groundwater systems are under the influence of surface water. Groundwater systems under the influence of surface water will be required to meet federally-mandated treatment technique requirements, and to conduct additional bacteria monitoring as well as turbidity monitoring. In addition, WSP performs audits of the delegated counties every three years in order to determine that regulations are implemented appropriately.

WSP directly oversees implementation of federal and State regulations for 725 transient non-community water systems in Anne Arundel, Charles, Prince George's, Montgomery, Cecil, and Wicomico counties since these six counties declined acceptance of the delegated program and funding assistance. Oversight includes regular inspections of the systems, enforcement of monitoring requirements, and follow-up to any water quality problems that arise. WSP reports technical and health-based violations to EPA on a quarterly basis for these systems.

Drinking Water Laboratory Certification

The Water Supply Program regulates and certifies 43 in-State and 59 out-of-State laboratories that analyze compliance samples for public drinking water systems. All in-state laboratories are inspected on a triennial basis. In addition, laboratories submit an annual renewal package that includes performance testing results for each approved test method, standard operating procedures, and method detection limit studies. An inspection is required before a laboratory receives certification, or approval for a new test method.

Water Appropriation and Use Permits

The Water Appropriation Permit review process is complex, and requires significant technical and administrative evaluation. All applicants except agricultural users are required to submit the results of aquifer tests and hydrogeologic investigations as part of their permitting process. For agricultural users, WSP staff conducts hydrogeologic investigations on their behalf.

Applicants for new or increasing large withdrawals must identify adjacent property owners and notify them of a pending application. WSP verifies the notification list and sends an additional notification, providing a brief summary statement of the potential impacts and providing an opportunity for the public to comment or request an informational meeting. This notice is also published in a local paper. In some cases, WSP may determine that the requested withdrawal could have an unreasonable impact on the water resource and/or other users in the vicinity and, as a result, the permit request is denied or modified.

The Program's legacy database for water appropriation permitting was converted to a customized new data management system called WSIPS (Water Supply Information and

Permitting System) in 2014. WSIPS uses a web-based format that is geographically based, allowing project managers to observe the relationship between a withdrawal request and other nearby permits. The IT contractor continued to work on refinement of WSIPS in FY 2016.

In FY 2016, 524 water appropriation permits were issued. At the end of the FY 2016, there were 8,384 active permits reflecting a total annual average authorized use of about 10 billion gallons per day.

Board of Waterworks and Waste Systems Operators

In FY 2016, 1,118 new certifications were issued and 1,202 certifications were renewed. At the end of the fiscal year there were 8,552 active certifications held.

Board of Well Drillers

In FY 2016, 68 new licenses were issued and 47 licenses were renewed. At the end of the fiscal year there were 558 active licenses.

SUCSESSES/CHALLENGES

Community and Non-transient Non-community Water Systems

In FY 2016, Maryland continued implementation of the new federal drinking water regulations. These regulations are complex, and, in many cases, result in increased monitoring and capital costs for the regulated communities. WSP provided training and on-site technical assistance for water systems throughout the State. The Program's emphasis on assisting smaller systems to better understand compliance requirements for the existing rules resulted in an overall improved compliance rate for all water systems in Maryland during this period

In FY 2016, because of the lead issues in Flint, Michigan, questions regarding whether every State uniformly implements the lead and copper rule became a dominating topic nationally. In Maryland, it required a significant amount of resources be dedicated to this issue. For example, the Water Supply Program had to review its processes to make sure there were no blind spots in the oversight of public water systems in Maryland. The Program also initiated a survey of all public water systems to better understand the extent of lead service pipes in Maryland's water systems. EPA issued a new health advisory for PFOS and PFOA in the spring of 2016. Selected public water systems were sampled for PFOS and PFOA in prior years as part of a national multi-year sampling program for unregulated contaminants. Water systems around the country detected the presence of these very persistent, fire retardant chemicals which received much publicity. Large residential buildings, hotels, and health care facilities experienced problems with the legionella bacteria in their hot water systems. Each of these unique water quality problems increased the public's concern about the safety of drinking water. MDE responded to numerous inquiries by the public and the press which sought to clarify potential health risks from drinking water. The impact of these water quality problems on Maryland has been limited, but the demand for information placed an additional workload on staff.

In FY 2014, MDE initiated a contract for the conversion from WSP's historical database to SDWIS-State, a database developed by EPA for tracking public drinking water system water quality and compliance nationwide. In FY 2016, approximately 80% of WSP's

electronic records were migrated to SDWIS-State. The second stage of the project which included the development of SDWIS Plus has not been completed. It is expected that SDWIS Plus will be operational in FY 2017. The revised FY 2015 numbers are included with the FY 2016 annual report.

Water Appropriation and Use Permits

Agricultural Water Appropriation and Use Permits continue to represent the great majority of new and increased water use requests of 10,000 gallons or more per day. Most of these uses are for irrigation of grain corn grown in support of the large number of chickens raised on the Delmarva Peninsula. In addition, new requests of water for raising poultry have gotten much public attention and concern from local residents. WSP participated in a public forum concerning the environmental and health impacts of raising large numbers of chickens in poultry houses. The Wicomico County forum attracted significant attention and was attended by hundreds of persons. The additional attention resulted in more comments from adjacent properties owners and the public being submitted during the permit review process.

The new data system, WSIPS, has had numerous technical difficulties that have made processing permit applications and entry and review of data for determining compliance with reported use more challenging. We are expecting that the list of outstanding data system issues will be corrected in FY 2017. Notices of violation were sent to systems who failed to complete reporting requirements, or operated with expired permits, and those who used water in excess of their permitted allocation.

Laboratory Certification

In early FY 2016, the Laboratory Certification Program had three full-time staff, meaning each staff person was responsible for the certification of more than 30 laboratories, the highest ratio in the Region III States. A typical ratio for other states is about 8 to 10 per lab certification officer. In FY 2016, the Laboratory Certification Program met its targeted goal of completing all triennial inspections for the year.

Public Water System Enforcement

As of June 30, 2016, 714 enforcement actions were issued to 216 community and non-transient non-community water systems. Fifty-one of these water systems had violations that were based on exceeding drinking water health standards. The remaining violations were technical violations.

Water Supply Program

Water Appropriation Permits

Waterway Construction – Dam Safety

PURPOSE

The purpose of the Dam Safety Division is to ensure that dams and other impoundment structures are designed, constructed, operated, and maintained safely, in order to protect public safety. The Dam Safety Division issues waterway construction permits for new dams and ponds, as well as for modifications to existing water impoundments. In addition, the Dam Safety Division conducts safety inspections of existing dams, conducts construction inspections, and provides technical assistance to dam owners and local Soil Conservation Districts (SCDs).

Many dams in Maryland were constructed decades ago and are now showing signs of deterioration. In order to provide safe service, dams require frequent safety inspections, monitoring, maintenance, and rehabilitation. In addition to larger dams, thousands of smaller dams (typically under 20 feet high) were constructed decades ago with corrugated metal pipe spillways. Often constructed on farms that have since been developed into residential communities, many of these dams are now in poor condition and threaten the safety of residents who live in newer homes constructed downstream of them.

The Dam Safety Division, through its dam inspection, dam owner assistance, permitting, and enforcement activities, seeks to prevent dam failures and the resultant loss of life, property damage, and environmental impacts. In addition to possible loss of life and significant property damage, significant erosion of stream channels and sediment deposition occur downstream of a failed embankment structure. In addition, dam failures can cause significant damage to wetlands and habitat, both aquatic and terrestrial, through the destructive force of the depth and velocity of the flood wave.

AUTHORITY

STATE: Environment Article, Title 5, Subtitle 5; COMAR 26.17.04.05

PROCESS

Upon issuance of a permit, copies of the approved plans and a copy of the Permit are forwarded to the Compliance Program. Dam Safety Division engineers conduct quality assurance inspections. The Compliance Program may inspect the site to determine whether construction has begun, perform sediment control inspections at the request of the Dam Safety Division, or respond to citizens' complaints.

Dams are classified into three categories according to the consequences of a potential failure:

- High Hazard: loss of life and significant property damage
- Significant Hazard: property/infrastructure damage
- Low Hazard: damage to floodplain and the dam itself

The inspection frequency is based on national guidelines and is responsive to the potential failure consequences as follows:

Hazard Class	Number in Category	Inspection Frequency	Sites Targeted/Year
High	82	Annually	82
Significant	123	Every 3 years	38
Low	278	Every 6 years	46
Total	483	--	166

In addition, the Division inspects sites with permits to construct new dams, reinspects existing dams when problems are found during the initial inspection, and inspects SCD ponds and Natural Resources Conservation Service dams.

Based upon the inspection findings, the Dam Safety Division may initiate enforcement actions, varying from a letter advising the owner to correct routine deficiencies up to issuing an order requiring immediate repairs to be performed or removing the structure due to an unsafe condition. MDE does not have the statutory authority to collect administrative or civil penalties for this program. However, MDE has statutory authority to collect criminal penalties.

SUCCESSSES/CHALLENGES

Maryland’s inventory of dams contains a total of 548 structures. 65 dams have been breached, leaving a total of 483 that are operational. Of these, 82 dams are considered “high hazard,” 123 are “significant hazard,” and 278 are “low hazard.” The Dam Safety Division performed 309 inspections in FY 2016. A total of 77 “high hazard” dams out of 82 have been inspected with the remaining structures scheduled for inspection by the end of calendar year 2016.

As shown below, 644 permits were in effect as of the end of FY 2016. This number reflects the number of inventoried dams (483) plus the number of maintenance and repair permits issued.

The total number of dams required to be inspected by the Dam Safety Division plus the small pond permits that have been issued over the last several years have made it very difficult for MDE to keep up with routine evaluations of dams that are on Maryland’s inventory. The Division receives many weekly requests for technical expertise regarding small embankment facilities that are not its direct responsibility. This has taxed current staff. The Division is engaging the soil conservation districts and local county stormwater management officials in helping with this extra workload. In some areas of the State, this has helped significantly. The Division will continue these efforts in the future.

A significant compliance concern for SSDSP is that approximately half of Maryland’s high-hazard dams lack current Emergency Action Plans, which are critical for storm preparedness and public safety. Unfortunately MDE lacks the legal authority to compel regular updating and submission of these plans for many dams.

* Coverage rate above is computed as the total number of sites inspected and dividing that by the dams in operation. See narrative for more detail about the Dam Safety Division’s approach to inspection frequency.

Waterway Construction – Dam Safety

Wetlands and Waterways Program

Nontidal Wetlands, Waterways, and Floodplain

PURPOSE

The goal of the Nontidal Wetlands Protection Act is to attain no net loss in nontidal wetland acreage and to strive for a net resource gain in non-tidal wetlands over present conditions. One of the mechanisms established by the Act to accomplish this goal is a comprehensive regulatory program that targets all activities that have a potential to adversely impact nontidal wetlands. These activities include the following:

- Removal, excavation, or dredging of soil or materials of any kind;
- Changing existing drainage or flood retention characteristics;
- Disturbance of the water level or water table by drainage, impoundment, or other means;
- Filling, dumping, discharging of material, driving piles, or placing obstructions;
- Grading or removal of material that would alter existing topography; and
- Destruction or removal of plant life.

Through its permit application review process, MDE first prevents wetland loss by requiring the applicant to evaluate project designs that will avoid wetland impacts. Based on this evaluation of alternatives, if MDE finds that impacts are unavoidable, the applicant is required to utilize the project design that will minimize the wetland impacts and provide appropriate mitigation for those impacts.

Mitigation, required for all unavoidable impacts that are authorized by MDE, means that the applicant must replace lost wetland acreage, function and value. This is usually accomplished by requiring the creation of new wetlands, restoration of relic wetlands, enhancement of degraded wetlands or some acceptable combination. MDE may also accept monetary compensation if it is determined that mitigation for nontidal wetland losses is not a feasible alternative. For example, monetary compensation may be accepted if the size of the nontidal wetland loss is less than one acre and a suitable mitigation site cannot be identified within the impacted watershed. The payment is deposited into the State's Nontidal Wetlands Compensation Fund and used by the State to construct non-tidal wetlands throughout Maryland.

In addition, MDE is also responsible for addressing potential impacts to the State's nontidal waterways. Authorization is required to conduct any activity that changes the course, current or cross-section of a nontidal stream or body of water, including the 100-year floodplain. Waterway construction activities are evaluated to ensure that they do not create flooding on upstream or downstream properties. Such activities are additionally evaluated to ensure protection of aquatic resources, including the maintenance of fish habitat and migration, from degradation.

AUTHORITY

STATE: Environment Article, Title 5, Subtitles 5 and 9; COMAR 26.17 and 26.23

PROCESS

Upon issuance of a permit or authorization, the file is transferred to the Compliance Program where an inspection priority is assigned. The inspectors then schedule routine inspections of the facilities adhering to the assigned priority as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand. Inspections are performed to verify that the projects are in accordance with the authorization. Because a site may involve nontidal wetlands, waterways and/or 100-year floodplain impacts, inspectors evaluate whether all the resultant construction impacts are in accordance with the permits. This may involve identifying or verifying a non-tidal wetland boundary and documenting findings in the inspection report. At sites where there may be 100-year floodplain impacts, it may be necessary to determine the floodplain boundary before project compliance can be determined.

MDE does not have the statutory authority to collect administrative penalties for this program.

SUCCESSSES/CHALLENGES

WMA continues to inspect and take enforcement actions to address violations impacting nontidal wetlands and waterways. WMA pursues enforcement cases involving nontidal wetlands through referrals to the Attorney General's Office, many as a result of investigation of citizen complaints.

Wetlands and Waterways – Nontidal and Floodplain

Performance Measure	TOTAL		
PERMITTED SITES/FACILITIES			
Number of permits/authorizations issued	795		
Number of permits/authorizations in effect at fiscal year end	2,451		
INSPECTIONS			
Number of sites inspected (“inspected” defined as at the site)	730		
Number of sites audited but not inspected (places where MDE reviewed submittals but did not go to the site)	0		
Number of sites evaluated for compliance (sum of the two measures above)	730		
Number of inspections, spot checks (captures number of compliance activities at sites)	1,830

Wetlands and Waterways – Nontidal and Floodplain

Wetlands and Waterways - Tidal

PURPOSE

Tidal wetlands are open water and vegetated estuarine systems affected by the rise and fall of the tide. In 1970, the Maryland General Assembly recognized that many tidal wetlands had been lost or despoiled throughout the State by unregulated activities such as dredging, dumping and filling, and that remaining tidal wetlands were in jeopardy. The Wetlands and Riparian Rights Act established a comprehensive plan to restrict and regulate activities conducted in tidal wetlands in order to preserve and protect them.

Prior to enactment of the Wetlands and Riparian Rights Act, over 1,000 acres of wetlands were being destroyed throughout tidewater Maryland every year. Today, through its regulatory program, MDE strives for a net resource gain over present conditions. Tidal wetlands are managed to provide reasonable use while furnishing essential resource protection. Licenses are issued for activities conducted in State wetlands by the Maryland Board of Public Works, based on recommendations from MDE. Permits are issued directly by MDE for activities conducted in private wetlands. A license or permit must be obtained before a person dredges, fills or otherwise alters a tidal wetland.

The following projects require authorization from MDE if conducted in tidal wetlands: dredging or filling; shoreline protection projects, including marsh creation, stone revetments and bulkheads; piers; boat ramps; jetties, groins and breakwaters; cable crossings; storm drain systems; and similar structures. The regulatory process for tidal wetlands is similar to that described for nontidal wetlands and waterways. Applications are evaluated to ensure that appropriate steps are taken to first avoid, and then minimize impacts to tidal wetlands. Mitigation is required for unavoidable impacts, with the amount of mitigation based on resources impacted; type of mitigation proposed; and location of mitigation. In-kind and on-site mitigation is preferred and required wherever appropriate site conditions exist.

AUTHORITY

STATE: Environmental Article Title 16; Subtitle 2; COMAR 26.24

PROCESS

Upon issuance of a license/permit/authorization, the file is transferred to the Compliance Program where an inspection priority is assigned. The inspectors then schedule routine inspections of the facilities adhering to the assigned priority as workload allows. Facilities are not given advance notification of routine inspections. At any time during the process, the inspection frequency can be adjusted as site conditions or workload demand. Inspections typically verify that the work being performed is in accordance with the work authorized and that all license or permit conditions are in compliance.

MDE does not have the statutory authority to collect administrative penalties for this program.

SUCCESSSES/CHALLENGES

WMA actively worked in close cooperation with the Attorney General's Office to resolve numerous cases involving unauthorized impacts to tidal wetlands. Many of the cases are

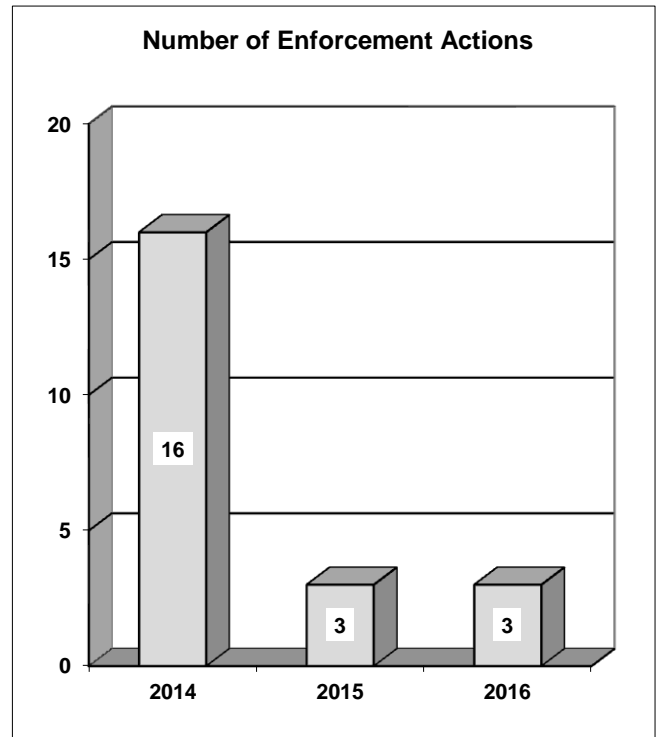

developed as the result of citizen complaints about pier extensions, adding boat lifts or boat houses, or building or extending bulkheads.

WMA is responding to a large number of citizen complaints in certain areas of the State to identify the majority of tidal wetlands violations through on-site inspections. Development of improved access to regular aerial photography of tidal coastlines with sufficient staff to review the information to identify work underway that has not been approved by MDE could help identify many other sites in violation. The on-site investigation and enforcement process is impacted by the limited number of inspectors, enforcement staff, and attorneys available to devote to tidal wetlands actions, and many cases will require significant time from identification to conclusion if a court action is needed.

**OFFICE OF BUDGET AND
INFRASTRUCTURE FINANCING**

Water Supply and Sewerage Construction

PURPOSE

Adequate water and sewer infrastructure is essential to public health and water quality protection. Water and sewerage construction permits help ensure that projects for water and sewerage are designed and constructed in accordance with sound engineering principles and comply with the State design guidelines to protect water quality and public health. These permits are required before installing, extending or modifying community water supply and/or sewerage systems including treatment plants, pumping stations and major water mains and sanitary sewers greater than 15 inches in diameter. These permits also help to ensure compliance with local comprehensive land use and water and sewerage plans and are supportive of community revitalization and land redevelopment.

AUTHORITY

STATE: Environment Article, Title 9, Subtitle 2, COMAR 26.03.12

PROCESS

Pre-approval: The applicant must show that the proposed water or sewerage facility is included in the current county water and sewerage plans, has a valid NPDES discharge permit (if applicable), and will be operated either publicly or privately under a financial management plan.

Post-approval: The project must be constructed in accordance with the approved plans and specifications. Staff engineers perform inspections to verify the facility is constructed to the approved design and/or the permittee submits “as built” plans or certification that the project was built in accordance with original plans as approved by MDE. Other approvals associated with the construction (i.e. sediment control, wetlands, etc.) are inspected under those media and by those inspectors. This program does not have authority to pursue traditional enforcement actions. For projects where MDE is providing funding, construction violations would necessitate the return of state funds by the local jurisdiction. If a construction violation were to go unnoticed, the eventual result would be the failure of the facility to meet its discharge permit requirements or other performance requirements. At that time, traditional enforcement tools available under the discharge permit program would be utilized.

There is no correlation between the number of permits issued and the number of sites inspected because inspections are performed only at active construction sites for projects being financed by MDE. Once construction has begun, these funded projects are inspected on a routine basis through completion.

SUCCESSSES/CHALLENGES

MDE monitors all projects for which State financial assistance is being provided. Accordingly, the annual number of inspections will vary as the number of financed projects initiate and complete construction. The program is on target with its goals.

**OFFICE OF THE ATTORNEY GENERAL
ENVIRONMENTAL CRIMES UNIT**

Environmental Crimes Unit Executive Summary

The Environmental Crimes Unit (ECU) of the Criminal Division of the Maryland Attorney General's Office investigates and prosecutes environmental crimes throughout Maryland. During FY 2016, ECU handled forty-seven inquiries, referrals, complaints, and/or requests. Of that total, ECU opened thirty-four in-depth criminal investigations. Of the thirty-four investigations, fourteen were the result of referrals from the Maryland Department of the Environment (MDE). Criminal charges were filed by ECU in nine of the cases opened. Seven prosecutions were completed in the state courts during the fiscal year, resulting in ordered jail terms totaling seven years, probation terms totaling twelve years and criminal fines, restitutions and costs totaling \$151,700. Courts additionally ordered community service and other penalties. The matters investigated and reviewed without opening a full-scale criminal investigation were the result of insufficient information available to justify a full-scale investigation; matters readily resolved; or matters sent to another, more appropriate agency to handle.

Environmental Crimes Unit

PURPOSE

The Environmental Crimes Unit of the Maryland Office of the Attorney General is responsible for the coordination, investigation and prosecution of criminal environmental violations and other associated criminal charges throughout the State of Maryland. Typical environmental cases involve the illegal discharge of pollutants into the waters of the State, the illegal accumulation, storage or disposal of hazardous waste, open dumping, accumulation or disposal of solid waste, violations of natural resource laws, and frauds associated with Maryland's lead paint laws.

Various factors are considered when making the determination whether to pursue criminal enforcement for violations of Maryland's environmental laws. These considerations include: (1) whether there is significant environmental harm and/or long term effects on the public health; (2) whether there is evidence of intentionally deceptive, misleading or fraudulent misconduct; (3) whether the violator was operating outside the regulatory scheme; (4) whether the violations are repetitive; (5) whether the violation(s) were part of an isolated incident or instead a pattern of continuing conduct; and (6) whether the violator(s) has either a prior criminal record or a history of civil/regulatory enforcement action.

The Unit currently consists of two Assistant Attorney Generals and two criminal investigators with specialized training and experience in the investigation and prosecution of environmental crimes. Additionally, ECU coordinates with the U.S. Environmental

Protection Agency, the Maryland Department of the Environment, the Maryland Department of Natural Resources and other local, state and federal agencies.

AUTHORITY

The General Assembly, through the *Environment Article*, provides the Attorney General exclusive or concurrent authority to prosecute criminal violations stemming from investigations involving water pollution, air pollution and waste. Likewise, the *Natural Resources Article* provides authority for ECU to prosecute certain natural resource cases. Furthermore, the Attorney General's office is granted authority pursuant to Article V, Section 3 of the Constitution of Maryland to investigate and prosecute certain specified crimes as directed by the Governor. Historically the Governor has included authority to investigate and prosecute violations of Maryland's Litter Control Law (§10-110 of the *Criminal Law Article*), and other broadly defined related offenses. The Unit seeks the Governor's authorization to investigate and prosecute other violations not within the *Environment Article* on either a case-by-case basis, or based on specific areas of concern.

PROCESS

The Environmental Crimes Unit receives complaints or allegations of possible criminal activity from multiple sources, including citizen complaints, other governmental and law enforcement agencies, MDE Administrations, or as a result of ECU investigation initiatives. This information is initially reviewed by an ECU prosecutor and investigator to determine the appropriateness and available resources for a full investigation. Cases deemed potentially suitable for prosecution are then subjected to a full investigation for the purpose of gathering sufficient evidence to accurately assess whether to file criminal charges. If charges are filed or indictments returned by grand juries, ECU prosecutors and investigators handle the case throughout the trial and any possible appeals.

MDE REFERRALS

In FY 2016, as a result of MDE referrals, ECU opened fourteen new in-depth criminal cases, and filed charges in six cases generated from MDE referrals. Six prosecutions were completed during the fiscal year from cases referred by MDE.

SUCCESSSES/CHALLENGES

A continuing challenge is to improve attorney and investigative resources for better effectiveness. It is only through complete and full investigation that criminal cases can be properly assessed and charges filed. The Unit's statewide responsibilities are currently carried out with a significantly smaller staff than in the past, with a total number of five at the end of the fiscal year. This includes two investigators and two prosecutors, all of whom are directly involved in the criminal investigation and enforcement work conducted by ECU. Officers from various outside police agencies who were previously assigned to

ECU, have been removed from the Unit as a result of budget constraints. Sworn law enforcement personnel with statewide authority assigned to this Unit have now been reduced by 100%. At points in the past there were as many as seven sworn law enforcement officers assigned to the unit for investigation, however, since FY 1999, ECU has had no assigned sworn law enforcement officers. The lack of sworn police officers assigned to the division continues to limit the actions which ECU can pursue. Additionally, investigations are further slowed with a reduced number of attorneys available to provide investigatory input, review evidence, make charging determinations and pursue prosecutions of each case.

Restoration to higher staffing levels would allow ECU to be more proactive in the pursuit of businesses and individuals who commit environmental crimes, and would allow for more cases to be pursued. These types of cases can be complex and involved, especially in a proactive form, and without full staffing, results will be hampered.

CHART 1 shows the number of investigations conducted by ECU during FY 2016 and the source of the complaints leading to the investigations.

FY '16 – INVESTIGATIONS OPENED		
SOURCE OF COMPLAINTS		INVESTIGATIONS OPENED
M D E	ARMA	0
	LMA	12
	WMA	1
	ERD	1
MDE TOTAL		14
OTHER SOURCES		20
TOTAL		34

The MDE administrations, ARMA, LMA, and WMA, have traditional enforcement programs. The Emergency Response Division responds to environmental emergencies and they may be caused by criminal activities.

CHART 2 shows the number of cases prosecuted by ECU during FY 2016. The chart distinguishes between the number of cases where prosecution was initiated during FY 2016 and the number of cases concluded during FY 2016. In prosecuting criminal cases, it is not uncommon for charges in a case to be filed during one fiscal year and concluded during a subsequent fiscal year. Charges may also be formally filed in a different fiscal year than when the investigation was opened by ECU.

FY '16 – PROSECUTIONS			
SOURCE OF COMPLAINTS		NO. OF CASES FILED	NO. OF CASES CONCLUDED
M D E	ARMA	0	0
	LMA	4	4

APPENDIX C

Environmental Article Section 1-301(d)

§1-301(d) Report on Enforcement Activities.

(1) (i) On or before October 1 of each year, the Secretary, in consultation with the Attorney General, shall submit to the Legislative Policy Committee, in accordance with §2-1246 of the State Government Article, a report on enforcement activities conducted by the Department during the previous fiscal year.

(ii) The report shall:

1. Include the information required under this subsection and any additional information concerning environmental enforcement that the Secretary decides to provide;
2. Be available to the public as soon as it is forwarded to the Legislative Policy Committee;
3. Include information on the total number of permits and licenses issued by or filed with the Department at any time and still in effect as of the last date of the fiscal year immediately preceding the date on which the report is filed;
4. Include information concerning specific enforcement actions taken with respect to the permits and licenses during the immediately preceding fiscal year; and
5. Include information on the type and number of contacts or consultations with businesses concerning compliance with State environmental laws.

(iii) The information required in the report under paragraph (3) of this subsection shall be organized according to each program specified.

(2) The report shall state the total amount of money as a result of enforcement actions, as of the end of the immediately preceding fiscal year:

- (i) Deposited in the Maryland Clean Air Fund;
- (ii) Deposited in the Maryland Oil Disaster Containment, Clean-up and Contingency Fund;
- (iii) Deposited in the Nontidal Wetland Compensation Fund;
- (iv) Deposited in the Maryland Hazardous Substance Control Fund;
- (v) Recovered by the Department from responsible parties in accordance with §7-221 of this article;
- (vi) Deposited in the Sewage Sludge Utilization Fund; and
- (vii) Deposited in the Maryland Clean Water Fund.

(3)(i) The report shall include the information specified in subparagraphs (ii), (iii), (iv), and (v) of this paragraph for each of the following programs in the Department:

1. Ambient air quality control under Title 2, Subtitle 4 of this article;
2. Oil pollution under Title 4, Subtitle 4 of this article;
3. Nontidal wetlands under Title 5, Subtitle 9 of this article;
4. Asbestos under Title 6, Subtitle 4 of this article;
5. Lead paint under Title 6, Subtitle 8 of this article;
6. Controlled hazardous substances under Title 7, Subtitle 2 of this article;
7. Water supply, sewerage systems, and refuse disposal systems under Title 9, Subtitle 2 of this article;
8. Water discharges under Title 9, Subtitle 3 of this article;
9. Drinking water under Title 9, Subtitle 4 of this article; and

10. Wetlands under Title 16, Subtitle 2 of this article.

(ii) For each of the programs set forth in subparagraph (i) of this paragraph, the Department shall provide the total number or amount of:

1. Final permits or licenses issued to a person or facility, as appropriate, and not surrendered, suspended or revoked;
2. Inspections, audits, or spot checks performed at facilities permitted;
3. Injunctions obtained;
4. Show cause, remedial, and corrective action orders issued;
5. Stop work orders;
6. Administrative or civil penalties obtained;
7. Criminal actions charged, convictions obtained, imprisonment time ordered, and criminal fines received; and
8. Any other actions taken by the Department to enforce the requirements of the applicable environmental program, including:
 - A. Notices of the removal or encapsulation of asbestos under §6-414.1 of this article; and
 - B. Actions enforcing user charges against industrial users under §9-341 of this article.

(iii) In addition to the information required in subparagraph (ii) of this paragraph, for the Lead Paint Program under Title 6, Subtitle 8 of this article, the report shall include the total number or amount of:

1. Affected properties registered; and
2. Inspectors or other persons accredited by the Department, for whom accreditation has not been surrendered, suspended, or revoked.

(iv) In addition to the information required in subparagraph (ii) of this paragraph, for the Controlled Hazardous Substances Program under Title 7, Subtitle 2 of this article, the report shall include the following lists, updated to reflect the most recent information available for the immediately preceding fiscal year:

1. Possible controlled hazardous substance sites compiled in accordance with §7-223 (a) of this article.
2. Proposed sites listed in accordance with §7-223 (c) of this article at which the Department intends to conduct preliminary site assessments; and
3. Hazardous waste sites in the disposal site registry compiled in accordance with §7-223 (f) of this article;

(v) In addition to the information required in subparagraph (ii) of this paragraph, for the Drinking Water Program, the report shall include the total number of:

1. Actions to prevent public water system contamination or to respond to a Safe Drinking Water Act emergency under §§9-405 and 9-406 of this article; and
2. Notices given to the public by public water systems under §9-410 of this article.

APPENDIX D

MDE Penalty Policy

MDE's Approach to Determining the Appropriate Response to Violations

MDE is committed to a consistent, timely and appropriate compliance assurance program, which is protective of the public health and the environment while creating a credible deterrent against future violations. It is MDE's policy to assess fair and equitable penalties in keeping with the factors specified by the governing statute, and commensurate with the nature of the violations. The statutory factors that MDE must consider in assessing administrative penalties are:

1. The ***willfulness of the violation***, the extent to which the existence of the violation was known to but uncorrected by the violator, and the extent to which the violator exercised reasonable care;
2. Any ***actual harm to the environment or to human health***, including injury to or impairment of the air, waters, or natural resources of this State;
3. The ***cost of cleanup and the cost of restoration*** of the natural resource;
4. The ***nature and degree of injury to or interference*** with general welfare, health, and property;
5. The extent to which the ***location of the violation***, including the location near waters of this State or areas of human population, creates the potential for harm to the environment or to human health and safety;
6. The ***available technology*** and economic reasonableness of controlling, reducing, or eliminating the violation;
7. The degree of ***hazard posed by the particular pollutant*** or pollutants involved;
8. The extent to which the current violation is part of a ***recurrent pattern*** of the same or similar type of violation committed by the violator.

MDE will consider each of the specific factors on a case-by-case basis. While all factors set forth in the statute will be considered, it is not necessary for all of the factors to be applicable before the maximum penalty may be assessed. A single factor may warrant the imposition of the maximum penalty. Furthermore, all factors, even if applicable in a given case, are not necessarily of equal weight in MDE's determination of a reasonable penalty.

APPENDIX E

Environmental Audit Guidance

(Revised 5/15/2006)

The Maryland Department of the Environment (MDE) recognizes the benefit from regulated entities that routinely evaluate their internal work processes for compliance with federal and State environmental requirements. Equally as important as identifying violations is the reporting of such violations to MDE for proper and complete remediation and abatement. MDE encourages self-auditing and compliance management as effective environmental management techniques. MDE may use its enforcement discretion in evaluating penalties for regulated entities that disclose violations of environmental laws or regulations as provided herein.

This guidance is not intended nor should it be construed to be a regulation as defined in Section 10-101, State Government Article. It sets forth criteria and guidelines for use by MDE staff in resolution of enforcement cases, and does not confer any legal rights upon any person.

Definitions

“Department” means the Maryland Department of the Environment.

“Environmental Audit” and “Compliance Management System” have the definitions used in the Environmental Protection Agency’s “Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations,” Final Policy Statement effective May 11, 2000:

“Environmental Audit” is a systematic, documented, periodic and objective review by regulated entities of facility operations and practices related to meeting environmental requirements.

“Compliance Management System” encompasses the regulated entity’s documented systematic efforts, appropriate to the size and nature of its business, to prevent, detect, and correct violations through various procedures, policies, mechanisms, and efforts.

“Environmental Requirement” means a requirement in (1) a state or federal law or regulation enforced by the Department, a rule adopted by the Department, a permit or order issued by the Department, or (2) an ordinance or other legally binding requirement of a local government unit under authority granted by state law relating to environmental protection.

“Regulated Entity” means a corporation, partnership, individual, municipality, governmental unit, or any other legal entity regulated under federal, state, or local environmental laws or regulations.

Statement of Guidance

- A. The Department may reduce a civil or administrative penalty for violations of environmental requirements that are voluntarily disclosed following an environmental audit or as a result of compliance management if:
1. The regulated entity discloses the violation to the Department in writing within 21 days after the violation is discovered, or within a shorter time limit, if required by statute or regulation;
 2. The regulated entity promptly initiates action to correct or eliminate the violation and all public or environmental harm caused by the violation. If the violation cannot be fully corrected within 60 days, the regulated entity shall submit a compliance plan to the Department within 60 days for review. The regulated entity shall maintain compliance with the plan as approved by the Department;
 3. The regulated entity provides the Department with a plan that includes steps to prevent recurrence of the violation; and
 4. The regulated entity fully cooperates with the Department regarding investigation of the disclosed violation.
- B. The relief outlined in Section A is not available if the Department determines that:
1. The violation was discovered through a legally mandated monitoring or sampling requirement prescribed by statute, regulation, permit, judicial or administrative order, or consent agreement. The violation must be discovered voluntarily and not as a result of an environmental requirement;
 2. The Department or a third party discovered the violation prior to disclosure by the regulated entity to the Department, or the regulated entity made the disclosure after commencement of a federal, State, or local agency inspection, investigation, or request for information;
 3. The violation was committed willfully, wantonly, intentionally, knowingly, or with gross negligence by the regulated entity;
 4. The regulated entity did not promptly initiate or diligently act to correct or eliminate the violation;
 5. The violation made imminent or caused significant environmental harm or had a significant effect upon public health;

6. The same or a related violation has occurred within the past three years or the violation is part of a pattern of recurrent violations by the regulated entity. For purposes of this section, violation includes any violation of a federal, State or local environmental law or regulation identified in a judicial or administrative order, consent agreement, order or decree, complaint, or notice of violation, conviction or plea agreement; or
 7. The disclosure is made for a fraudulent purpose.
- C. This guidance is not intended for use under circumstances in which the violation(s) at issue would result in the regulated entity gaining an economic advantage over its competitors.
 - D. This guidance does not affect individual liability for criminal misconduct.
 - E. This guidance does not apply to liability under a judicial or administrative order, consent agreement, order or decree, complaint, notice of violation, conviction or plea agreement.
 - F. Relief under this guidance shall not be available if the Department receives formal notification from the delegating federal agency of that agency's intention to propose rescission of the Department's authority over the applicable federal environmental program.

APPENDIX F Supplemental Environmental Projects

A Supplemental Environmental Project (SEP) is an enforcement tool that augments traditional penalty actions. They are important because the projects provide direct environmental benefits to communities beyond those achieved by facilities returning to compliance. The Land Management Administration and the Water Management Administration made use of SEPs during FY 2016 totaling \$2,322,000. The administrations issued eight SEPs during FY 2016. Details about each administration's SEPs are on the following pages.

Administration	Number of SEPs		Total Value of SEPs	
	2015	2016	2015	2016
Air and Radiation Management Administration	1	0	\$75,000	0
Land Management Administration	5	3	\$104,000	\$964,000
Water Management Administration	2	3	\$3,415,000	\$1,358,000
TOTALS	8	6	\$3,594,000	\$2,322,000

Air and Radiation Management Administration SEPs, FY 2015

Total SEPs: 0
Total Value: \$0

Land Management Administration SEPs, FY 2016

Total SEPs: 3

Total Value: \$964,000

All of the Land Management Administration SEPs in FY 2016 were for lead enforcement cases. Three SEPs required property owners to replace all windows in rental units containing lead based paint, or obtain Lead Free Certification. The following table lists the individual SEPs.

Program	Case #	Property Owner	Description	SEP Value
Lead	14-17-18717	Stanley S. Levy Revocable Trust	Requiring window replacements in 4 units	\$16,000
Lead	15-03-20022	Lester Miskimon	Requiring window replacements in 4 units	\$4,000
Lead	15-15-20589	RHE Fireside Park, Inc.	Obtain lead free certificates on 236 units (built post 49)	\$944,000

Water Management Administration SEPs, FY 2016

Total SEPs: 3

Total Cost: \$1,358,000

Newland Park Municipal Landfill - Wicomico County – WMA approved a SEP that will cost approximately \$198,000. The project consists of the demolition of the former Teen Adult Center located at 11351 San Domingo Road in Wicomico County and the planting of more than 2,000 trees on approximately three acres. The project will also conserve more than four additional acres of existing forest area on the property. The project was initiated in March of 2016 and is due for completion in January of 2017.

Potomac Water Treatment Facility – WMA approved a SEP valued at \$1,000,000. The project must reduce or mitigate sediment entering the Potomac River or Chesapeake Bay, and is expected to include stream restoration and/or stormwater pond retrofit projects.

Glenelg Country School - Glenelg Country School will install a TRUEGRID permeable paving system on the parking area of the school's outdoor athletic facility. The total value of the SEP is estimated at \$160,000.
