Management and Leadership

Environmental Policy Statement

Harris is committed to developing and maintaining strong environmental management programs that support a cleaner environment, conscientious use of natural resources and stewardship of our ecosystems and communities.

All Harris operations are regularly evaluated for opportunities to minimize our environmental impact. We focus on chemical elimination or substitution where concerns exist and where that is not possible minimization and recycling take priority. Our corporation has a goal for striving towards Zero Waste to Landfill and continuous improvements to our Sustainability programs and processes.

Through the challenging work of dedicated local teams, we have reviewed virtually all our processes and have eliminated many of our potential hazards and exposures. Where potential impacts remain, appropriate control technologies and procedures are implemented and maintained.

Environmental Restoration or Community Environmental Projects

As part of Care for the Community related to the environment, Harris Corporation is always willing to participate in future projects and efforts to ensure the wellbeing and improvement to our environment and the systems that help to support this.

Recycling

Harris Corporation seeks first to reduce, recycle, and reuse waste associated with our operations, but when that isn't feasible, we emphasize responsible waste management. Harris sites continually find new ways to follow and promote these principles, and in 2018, Harris recycled 29 percent of our 1,046,436 pounds of hazardous waste and 34 percent of our 3,826,509 pounds of non-hazardous waste. Our dedicated efforts to increasing recycling percentages in both areas are ongoing.

Hazardous Waste/Toxic Use Reduction

We focus on chemical elimination or substitution where concerns exist and where that is not possible minimization and recycling take priority.

Energy

Energy Efficiency

Harris has an ethical responsibility to reduce energy consumption — through energy efficiency and conservation — as part of our efforts to reduce greenhouse gas emissions. During the past two years, we have set corporate goals towards reduction in total energy use. The corporation has met these goals each year.

Water

Water Conservation

Global water issues continue to grow in importance. At Harris, we want to be part of the solution, and the biggest way we can help is to reduce our water consumption so that there's more water available where and when it's needed. During the past two years, we have set corporate goals towards reduction in total water use and water recycling where possible. The corporation has met these goals each year.

Profile Updated January 2019

Help build a greener, more sustainable Maryland through voluntary practices that reduce environmental impacts and save money.
