Grant helps assess sites in four counties

By Darshana Patel

On June 20, the Maryland Department of the Environment (MDE) received a \$320,000 grant from the U.S. Environmental Protection Agency to perform brownfield assessments.

The brownfield assessments will support MDE's efforts to spur the cleanup and revitalization of brownfields sites in Frederick, Wicomico, Somerset, and Allegany counties.

Brownfields are abandoned, idle, or under-utilized industrial and commercial facilities where expansion or redevelopment is complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant.

The grant is a part of the new Small Business Liability Relief and Brownfields Revitalization Act signed by President George W. Bush in January 2002 to help states and communities around

Overflow study gathers data for sewer system upgrades

By Gilbert W. Lookingland, III

For parts of the last year, staff in the Maryland Department of the Environment's (MDE) Technical and Regulatory Services Administration have participated in an intensive water quality monitoring study to assess environmental conditions in the North

Branch of the Potomac River and its tributaries in the Cumberland-Frostburg region of the state. Their interests lie in observing and evaluating environmental conditions during periods of intense rain with subsequent high flows in the regional streams.

Western Maryland has several

communities on sewer systems that, by design, combine sanitary sewage and storm water. During rain events, these systems are susceptible to receiving storm water flow in addition to raw sewage that is normally transported to local wastewater treatment plants.

If the storm is significant and

rainfall totals are high, the carrying capacity of these systems is exceeded, domestic raw sewage spills into local streams, and a Combined Sewage Overflow (CSO) event occurs.

The Cumberland-Frostburg communities routinely experi-

Make sure to secure, clean septic tanks, wells

By Mike Eisner

A 15-month-old Eastern Shore child fell into a seepage pit May 19 and died as a result of his injuries. The child had been playing with a ball when the accident occurred at his Linkwood (Dorchester County) home.

As a solemn reminder, Maryland's Department of Environment (MDE) is advising residents to periodically check the condition of wells and septic systems, both active and abandoned, to prevent a recurrence of this horrible event.

Modern septic tanks and system components are made of precast concrete, and are very resistant to decay. However, prior to 1975, underground sewage tanks and seepage pit covers may have been made of steel,

which is subject to rust. Such was the case in the Linkwood tragedy. The child fell into a seepage pit that had a metal cover.

In addition to steel tanks and tank covers decaying unseen beneath the soil, there may be improperly abandoned or decaying cesspools and seepage pits. These types of older sewage disposal systems which once served, or may still be serving, older homes may take several forms. Cesspools and seepage pits are typically an open pit lined with brick or stone, and may be covered with metal, concrete or wood. The passage of time and natural processes destroy these materials leaving them vulnerable to collapsing.

Abandoned wells may pose a

News Briefs

Increased hydrogen use could impact atmosphere

While hydrogen is touted as a clean fuel waiting to replace fossil energy sources, a new study concludes its widespread use could increase damage to the ozone layer that protects Earth from ultraviolet radiation.

The report in recent editions of Science magazine says such trade-offs shouldn't prevent development of hydrogen fuel cells, but they should be taken into account when considering what measures might be needed to limit any environmental downside of a hydrogen-fuel economy.

Ever since President Bush earlier this year singled out hydrogen development as a top energy priority, the fuel has been the buzzword in energy debates. Congress plans to pump billions

of dollars into hydrogen research and the Bush administration is talking about an international push to develop the fuel.

Unlike fossil fuels—coal, oil or natural gas—which produce an array of chemicals that pollute the air, a hydrogen fuel cell when making energy releases only water as a byproduct.

But in the Science article, researchers at the California Institute of Technology raised the possibility that a hydrogen economy will not necessarily be a totally environmental friendly one.

Their study says that if hydrogen fuel replaced fossil fuels entirely it could be expected that 10 percent to 20 percent of the hydrogen would leak from pipelines, storage facilities, processing plants and fuel cells in cars

Environment project publishes new guide

By Darshana Patel

The Environment Project at the Community College of Baltimore County announces the availability of its *Repair Baltimore* directory. The directory contains information about how to repair, reuse, recycle or dispose of many kinds of objects, including appliances, electronics, and sports equipment.

Repair Baltimore increases consumer awareness of the environmental benefits of repair and reuse to empower decision-making and provides a mechanism for Baltimore's repair

shops to network and increase their market share.

The *Repair Baltimore* directory was created from funding from the U.S. Environmental Protection Agency's Sustainable Development Challenge Grant Program and was compiled and published by the project. The project sought to catalyze sustainable economic growth in Baltimore by empowering material goods repair and reuse businesses.

The Community College of Baltimore County created The Environment Project in 1994.

The Environment Project works to advance sustainable principles, practices, and processes through a wide range of credit, professional development, grant funded and outreach programs. These programs are developed and offered to professionals within the environmental industry, representatives from companies and institutions looking to comply with environmental regulations, communities seeking to enhance quality of life and economic development, students considering environmental careers, and individuals from all

walks of life interested in integrating environmental and economic concerns into their daily lives.

Since the project's inception, enrollment in environmental science credit courses at the college has increased more than 500 percent and the number of classes offered has grown from 13 to more than 60 annually.

Repair Baltimore is available in hard copy as well as on-line. For more information consult www.rebusiness.org or call Allison Anderson of The Environment Project at (410) 719-6551.

GRANT Continued from Page 1

"This grant will allow MDE to inventory, assess, and promote community involvement at four City of Frederick sites and three sites with petroleum contamination located in Salisbury, Princess Anne and Cumberland," said MDE Acting

Secretary Kendl P. Philbrick. "Community outreach and health education activities associated with assessments will be conducted in conjunction with the University of Maryland Environmental Health Education Center. Once cleaned up, these

sites will be ripe for redevelopment."

The brownfields sites in the City of Frederick are located in municipality's downtown corridor. Following assessment work along Carroll Creek and in the heart of the historic district, the real estate development community will have a better sense of the actual cleanup costs of each site. The future development of these sites will create opportunities for mixed-use development, including offices, retail shops, restaurants, and residential development.

The petroleum sites that will be addressed by the grants are for Lester's Garage in Salisbury, Highway Petroleum Sales, Inc. in Cumberland, and H & H Market

in Princess Anne. All are located in close proximity to public roads, utilities and other infrastructure.

In addition to the limiting of liability concerns for property owners and prospective purchasers of brownfield sites, the Small Business Liability Relief and Brownfields Revitalization Act expands potential federal financial assistance for brownfields revitalization.

The federal financial assistance provided by this grant will enhance MDE's efforts to assist local governments and communities to assess possible contamination, cleanup sites and revitalize properties for redevelopment. For more information, consult MDE's website at: www.mde.state.md.us.

PITS Continued from Page 2

similar hazard. These can be identified by the 2 to 3-foot diameter well rings that extend to or above the ground surface. Frequently these wells have no cover or a cover that is not child proof. Maryland regulation considers any well that may pose a hazard to human or animal safety as abandoned and requires these wells to be properly backfilled and sealed by either a licensed well driller or under the supervision of a master well driller, MDE, or an approving authority.

"Residents are advised to find out if these rotting tanks, covers and/or abandoned wells are present in their yards, and if they are, to properly abandon, seal or repair them," said MDE Water Management Administration Director Robert Summers. "We

want to remind citizens that septic tanks should be pumped out periodically by a liquid waste hauler to remove accumulated solids. We encourage you to take this opportunity to have the necessary maintenance on your system performed, and at the same time have your system inspected for safety."

For general septic system information or a free video on septic system operation and maintenance contact MDE toll free in Maryland at (800) 633-6101, ext. 3778.

Local health departments can also provide general information and may have information specific to your property. For information on backfilling abandoned wells, please contact a licensed well driller.

'Make Waves' shows students careers in the water industry

Adapted from *Water Works!*, a curriculum developed by the Metropolitan Water District of Southern California and the San Diego County Water Authority, *Make Waves* provides 12 hands-on activities designed to entice

secondary students to consider careers in the water environment. A wide variety of water environment careers from engineering to administration offers opportunities for young people

Schools earn 'Green' title, nature center earns kudos

Fourteen schools across Maryland were recognized recently at the fifth annual Green School Award Celebration. Each of this year's Green Schools received a "Green School" flag to display at their school, as well as state and local citations. This year's group joins the 72 other public and private schools that have received this recognition over the past four years. Eight schools that were awarded Green School status in 1998 and 1999 received recognition for maintaining their sta-

tus as a Green School. The Maryland Association of Environmental and Outdoor Education (MAEOE) awarded the first Green Center Award too. The award was given to The Lathrop E. Smith Center in Montgomery County for providing a model of excellence in environmental education and role in supporting area schools in becoming Green Schools. The Lathrop E. Smith Center received a gubernatorial and County Executive citation and a gift of equipment from REI in College Park.

On top, representatives of Roland Park Country School show their flag. Above MAEOE President Steve Heacock, right, congratulates Scott Mitchell of REI and Jim Stuft with the Lathrop E. Smith Center.

The 2003 Green Schools were:
Dowell Elementary,
Hereford High School,
John Poole Middle School,
Kitzmilller Elementary,
Linton Springs, Mill Creek Middle School,
Mt. Airy Elementary,
Northern Middle School,
Plum Point Middle School,
Pocomoke Elementary School,
Pocomoke Middle School,
Roland Park Country School,
Wicomico Day School,
and William S. James Elementary.

MDENVIRONMENT PHOTOS BY RICHARD J. MCINTIRE

Recognized for maintaining their status as a Green School: Bohemia Manor Middle School, Cockeysville Middle School, The Harbour School,

Hollywood Elementary, Huntingtown Elementary, Westbrook Elementary, Watkins Mill High School, and Yough Glades Elementary.

On the upper left, proud students from one of the re-certified schools display a congratulatory check from the Living Classrooms Foundation. Above the Green Schools Committee receives praise for their work. From left are Kate Clavijo, Carol Towle, Kerri Bentkowski, David O'Neill, Cindy Grove, and Steve Heacock.

STUDY Continued from Page 1

ence such sewage overflows. Other sewage systems are not designed to include storm water, but are subject to infiltration problems, breakage and pump station failures, which can result in sanitary sewer overflows (SSOs).

The water quality monitoring study, conducted by Water Quality Monitoring Division in MDE's Annapolis Field Operations Program, focuses on measuring bacteria levels occurring as a direct result of untreated sewage entering the streams following a CSO triggered event. This project characterizes the spatial and temporal impact of CSO discharges on the water quality of receiving streams in the Cumberland area.

In addition, the study was designed to address the region's steep topography and a vulnerability to regional storms. Thirty-one sample collection sites were strategically chosen to capture the entire network of locations where known CSO discharges routinely occur.

"We don't necessarily collect samples at every CSO station," said Kyle Nelson, an MDE Environmental Enforcement Inspector. "Rather we have placed some stations above and below known 'hot spots' to distinguish the water quality and bacteria levels prior to and following events of untreated sewage entering the streams."

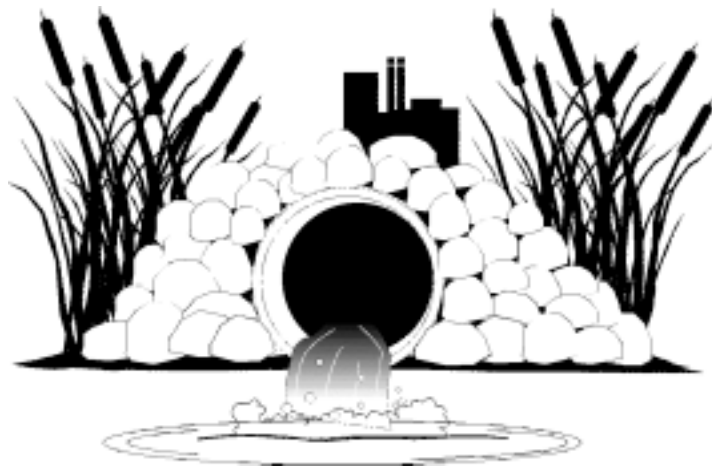

The 31-station network also has sites at the headwaters, laterally throughout the stream, and at the confluence of each main tributary - including Evitts, Wills, and Georges creeks - in the North Branch Potomac River.

Although CSO discharges typically occur during periods of intense rain or isolated severe storms, the surveys will assess water quality in the region under varying hydrological conditions in an effort to establish a data set of baseline conditions. Baseline

surveys are defined by the study as periods of 10 days or more when there has been 0.2" of no rainfall in the region and CSOs have not occurred. The project began last October and will run through September with six baseline collections spread out over the calendar year to address the irregular patterns in hydrology and weather related seasons.

Running concurrently with baseline collections are rain event surveys when activated CSOs occur and sewage is released. The study is designed to capture four rain events that could happen at any time during the course of the project. "The ideal goal of a rain event collection would be to capture an isolated storm with a rainfall total between 1 to 2 inches during each of the four seasons," said Dennis Rasmussen, a section head in MDE's Water Quality Monitoring Division. "While the weather never seems to cooperate with storm chasing projects such as this, we do realize the overwhelming scientific benefits to being able to compare rain event collections against baseline conditions. Thus, we constantly track the weather for the region and are prepared to mobilize on a moment's notice."

Typically for a rain event, four Annapolis Field Office employees drop what they doing and travel to Frostburg to "set-up camp" in a hotel that is centralized in the region. The employees are prepared to stay in Western Maryland sometimes for three to four consecutive nights. When the conditions are ideal - heavy rain, high flows, and activated CSOs - all 31 stations are sampled. It is often the case that during this small window of opportunity—when all conditions are ideal—the highest levels of bacteria and greatest threat to human health and stream ecology are produced. The entire 31-station network is again sampled two

to three days and five to seven days following a storm. This produces a total of three days of collections and nearly 100 samples for each storm event.

The benefit of the three-day response per rain event allows MDE to capture the worst possible conditions on Day 1. Then, over the course of the subsequent, Day 2 and Day 3 collections, observations of how quickly the stream flushes out the pollutants can be made. With this approach, the concentrations of bacteria in the entire system including the North Branch Potomac River are tracked through time.

Initial data shows a deviation from baseline conditions during rain events when CSOs are discharging. This data is preliminary, as two rain event collections and three baseline collections remain to complete the study. However, the observed trend with just two captured storm events thus far indicates that bacteria levels rise significantly, immediately following heavy rains. Within 24 to 48 hours of the event, the levels begin to decline, and within 72 hours the levels have reached

normal baseline conditions.

Overflow enforcement

In 2001, MDE entered into a judicial consent order with Frostburg, Allegany County, La Vale and City of Cumberland that requires each jurisdiction to develop and implement a Long Term Control Plan (LTCP) for their combined sewer systems. Frostburg has submitted its LTCP and approved it on April 21. Allegany County is the next jurisdiction due to submit their LTCP, followed by La Vale and City of Cumberland. MDE has also entered into a separate judicial consent order with Westernport that requires the town to develop and implement a LTCP for its combined sewer system. MDE is also working with Allegany County regarding completion of requirements under a judicial consent order that addresses studies and improvements to the Celanese sewer system and the Georges Creek sewer system and treatment plant to address continual sanitary sewer overflows.

WAVES Continued from Page 3

to choose a career path that makes a difference in the global water environment.

Offering supplemental education, guidance counselors and secondary educators will benefit from the curriculum's classroom

application; while, water quality professionals will find it to be an invaluable resource for plant tours and school presentations. For more info, call 1-800-666-0206 or try e-mail at pubs@wef.org

Enforcement & Compliance Notes

--May 15 to June 15, 2003--

Air & Radiation Management Administration

Constellation Power, Gould Street – Baltimore City

On May 14, MDE signed a Tolling Agreement with Constellation Power in connection with an enforcement action being pursued by MDE against Constellation's Gould Street electrical generating station. MDE is pursuing a civil settlement for violations of Maryland's visible emissions regulations at the Gould Street Plant. The Tolling Agreement provides an additional six months to negotiate a settlement by extending statute of limitations cut-offs. MDE inspectors have observed visible emissions from the facility eight times over the past two years. **Status:** Constellation's Tolling Agreement ends October 1st. (Reference #AQCP 030514)

S. Dev Aujla, MD – Baltimore County--On May 21, MDE issued a Complaint, Order and Administrative Penalty against Dr. Aujla for failure to certify and for continued use of an uncertified radiation machine. The certification expired July 1, 2002. The penalty is \$10,000. **Status:** Dr. Aujla appealed the Order. (Reference #RHP 03-01)

Howard Kesner, MD – Baltimore City--On May 22, MDE issued a Complaint, Order and Administrative Penalty against

Dr. Kesner for failure to certify and for continued use of an uncertified radiation machine. The certification expired July 1, 2002. The penalty is \$10,000. **Status:** Dr. Kesner has 10 days to appeal the Order and 30 days to request a hearing on the Penalty. (Reference #RHP 03-06)

Public School Boiler Project--On May 27 and 28, respectively, MDE signed Consent Agreements with St. Mary's County and Talbot County school boards. St. Mary's County Public Schools installed 65 boilers without obtaining the required air quality permits and has agreed to pay the \$22,100 owed in past-due permit fees. Talbot County Public Schools installed 15 boilers without obtaining the required air quality permits and has agreed to pay its \$5,100 in past due permit fees.

MDE has been working with the Maryland Department of Education and local school boards to address school boilers installed without air quality permits. MDE is working with the local school boards to collect past due permit fees. MDE continues to work with the other school systems on this project. **Status:** Talbot and St. Mary's Counties cases closed. (Reference #AQCP 030527/28)

Waste Management Administration

Darrell P. and Lori A. McKnight - 1 affected property – Baltimore City - Darrell

P. and Lori A. McKnight were issued a Complaint, Order and \$10,000 Civil Penalty on May 27 for violating Maryland's Lead Laws by failing to register a pre-1950 rental units and to obtain risk reduction certificate(s) of lead inspection compliance. **Status:** Darrell P. and Lori A. McKnight have 10 days to request a hearing on the Complaint and Order and 30 days to request a hearing on the Penalty. (Reference No.02-30-5267)

W.A. Rubie Enterprises, Ltd. and Winston A. Rubie – 14 total affected properties – Baltimore City - W.A. Rubie Enterprises, Ltd. and Winston A. Rubie were issued a Complaint, Order and a combined \$75,000 in Civil Penalties on June 6 for violating Maryland's Lead Laws by failing to register pre-1950 rental units and to obtain risk reduction certificate(s) of lead inspection compliance. **Status:** W.A. Rubie Enterprises, Ltd. and Winston A. Rubie have 10 days to request a hearing on the Complaint and Order and 30 days to request a hearing on the Penalties. (Reference Nos.01-30-4087 and 01-30-4088)

Moral W. and Loreen Trent – 6 total affected properties – Kent and Queen Anne's Counties - Moral W. and Loreen Trent were issued a Complaint, Order and \$15,000 Civil Penalty on June 4 for violating Maryland's Lead Laws by

failing to register pre-1950 rental units and to obtain risk reduction certificate(s) of lead inspection compliance. **Status:** Moral W. and Loreen Trent have 10 days to request a hearing on the Complaint and Order and 30 days to request a hearing on the Penalty. (Reference No.02-14-4926)

Carol P. Browne – 1 affected property – Baltimore City - Carol P. Browne was issued a Complaint, Order and \$10,000 Civil Penalty on June 9 for violating Maryland's Lead Laws by failing to register pre-1950 rental units and to obtain risk reduction certificate(s) of lead inspection compliance. **Status:** Carol P. Browne has 10 days to request a hearing on the Complaint and Order and 30 days to request a hearing on the Penalty. (Reference No.02-30-5825)

Water Management Administration

Monumental Paving & Excavating, Inc., Baltimore City – On May 20, MDE issued an Administrative Complaint and Penalty against Monumental Paving & Excavating, Inc. for alleged sediment control and sediment pollution violations at a construction site located in the area of Ridgeview, Parkmont and Glenmore Avenues in Baltimore City. MDE has assessed a penalty of \$11,000 in this case. The defendant has requested a

See NOTES , Page 9

Nominations sought for environmental awards

Nominations are currently being accepted to recognize businesses and government entities involved in exceptional pollution prevention efforts.

The Chesapeake Bay Program and the Maryland Department of the Environment are seeking businesses that have voluntarily implemented pollution prevention projects to receive this year's *Businesses for the Bay* Excellence Award. Awards are granted to small, medium, and large businesses as well as government facilities. The deadline for nominations is July 31. Awards

will be presented at the *Businesses for the Bay* Annual Meeting being held October 1 at the National Wildlife Visitor Center in Laurel. World-renowned sustainability expert Paul Hawken is the meeting's featured speaker. High-level state

government officials are also expected to participate.

Businesses for the Bay is a vol-

untary program that encourages and recognizes pollution

prevention practices at businesses, government facilities, and other organizations located within

the Chesapeake Bay watershed. More than 500 organizations throughout the watershed are participating members. Since the program's inception in 1996, program participants throughout the Chesapeake Bay watershed have reported the reduction and recycling of 5.8 billion pounds of waste and materials at a cost savings of \$54 million. These wastes ranged from specific chemicals to air emissions and solid waste.

For more information on the awards criteria and annual meeting, go to www.b4bay.org or call 1-800-968-7229, ext. 719 for information.

BRIEFS Continued from Page 6

and at power plants.

Because hydrogen readily travels skyward, the researchers estimated that its increased use could lead to as much as a tripling of hydrogen molecules going into the stratosphere, where it would oxidize and form water.

"This would result in cooling of the lower stratosphere and the disturbance of ozone chemistry," the researchers wrote, resulting in bigger and longer-lasting ozone "holes" in both the Arctic and Antarctic regions, where drops in ozone levels have been recorded over the past 20 years. The loss of some of the Earth's ozone layer is of concern because ozone blocks much of the sun's ultraviolet light, which over time can lead to skin cancer, cataracts and other problems in humans.

Microbe eats industrial chemical

Scientists have identified a microbe that gobbles up toxic waste deep underground, offering a potential way to clean up a particularly nasty chemical that has contaminated the water underneath hundreds of the nation's industrial and military sites.

Microbiologist Frank Loeffler

said the bacterium, known as BAV1, was found in soil samples 20 feet down at a hazardous waste site in Oscoda, Michigan. BAV1 flourishes in the packed earth where there is no oxygen, feeding off certain toxic compounds, he said.

Other microbes that eat toxic waste have been discovered over the years and are used in some limited fashion to clean up contaminated sites. However, this is the first one found that thrives on vinyl chloride underground.

Vinyl chloride is one of the most common and hazardous industrial chemicals. It can linger in the soil for hundreds of years and is present at about a third of the toxic Superfund sites listed by the Environmental Protection Agency (EPA). It usually accumulates as a deteriorated form of more complex compounds found in dry cleaning fluid and metal cleansers.

Brief contact with vinyl chloride can cause dizziness, drowsiness and headaches. Long-term exposure can raise the risk of a rare form of liver

cancer, according to the EPA.

Loeffler has already tested the bacterium on vinyl chloride at the contaminated site in Michigan. Its ability to eat the toxic compound, and render it harmless, was hastened in one test by adding plant fertilizer and other nutrients to the soil. In another trial, vinyl chloride was destroyed by injecting the soil with concentrated amounts of BAV1 developed in the lab. Loeffler's work was presented in a recent issue

NOTES Continued from Page 6

hearing to contest the assessment of the penalty. **Status:** Case pending. (Reference # AP-03-0247).

William E. Sims, et. al., Calvert County - On June 16, 2003, MDE and William E. and Joann Sims finalized an Administrative Consent Order to settle the Complaint MDE filed on October 11, 2002 for alleged water pollution violations at the Bright Acres Mobile Home Park in Dunkirk, Calvert County, Maryland. Under the terms of the Consent Order, the Sims' have agreed to pay a pen-

alty of \$4,800 to the Maryland Clean Water Fund. **Status:** Case closed. (Reference # CO-03-0261).

of the journal Nature. Scientists have long suspected that deep in the ground some type of microbe found vinyl chloride palatable. The discovery will help scientists determine which enzyme breaks down vinyl chloride. If the enzyme is found, more robust bacteria that can survive in the presence of oxygen or eat faster than BAV1 could be genetically engineered to digest vinyl chloride.

Water and Sediment Pollution Penalties – Statewide

Water and Sediment Pollution Penalties – Statewide

During the period May 15 – June 16, 2003, MDE collected an additional \$7,100 to the Clean Water Fund in resolution of alleged water pollution violations from five facilities and \$11,520 to the Sediment Fund in resolution of alleged erosion and sediment control/sediment pollution violations from five facilities.

For the Record

The following is a partial list by county of applications received by MDE and other permitting activity between May 16 and June 15, 2003. For more information on these permits, please contact MDE's Environmental Permit Service Center at (410) 537-3772.

Allegany

ALLEGHENY POWER - CUMBERLAND - 700 Fourth Street, Cumberland, MD 21501. (2003-OPT-6830) Oil operations permit for above ground storage tank and transportation
