

MULTI-STATE ZEV TASK FORCE

About the ZEV Task Force

On October 24, 2013, the governors of eight states signed a memorandum of understanding (MOU) committing to coordinated action to ensure the successful implementation of their state zero-emission vehicle (ZEV) programs. ZEVs include pure battery-electric vehicles (BEVs), plug-in hybrid electric vehicles (PHEVs), and hydrogen fuel cell electric vehicles (FCEVs). Collectively, these states are committed to having at least 3.3 million ZEVs operating on their roadways by 2025. The MOU identifies joint cooperative actions the signatory states will undertake, and additional actions that individual jurisdictions are considering, to build a robust market for ZEVs. For more information about the Task Force, see the Multi-State ZEV MOU and Multi-State ZEV Action Plan.

Vehicles

There is a growing number of plug-in vehicle models now available from most major auto manufacturers, although some of them are only offered in select markets.

Dealer Recognition

Some states have initiated recognition programs for the dealerships who lead the state in overall EVs sold or as a percentage of sales.

State Initiatives

The ZEV MOU states are taking a wide range of actions to support the deployment of electric vehicles. Learn more about their efforts here.
