1 INTRODUCTION

For the past ten years, ExxonMobil has been conducting investigation and remediation activities in response to the February 2006 discovery of a release of gasoline from an underground storage tank system at the former Exxon service station #28077 on Jarrettsville Pike. As part of this investigation, ExxonMobil has conducted a private supply well (PSW) sampling program to monitor water quality in supply wells in the vicinity of the Site. Currently 259 PSWs are sampled regularly – 43 are sampled monthly, 86 are sampled quarterly and 130 are sampled semi-annually (listed on **Table 1** and depicted on **Figure 1**). After a decade of investigation, remediation and monitoring of groundwater conditions, the data support modifications to the current private supply well sampling program.

Based on the overall investigation and remediation, and supported by the PSW data presented herein, ExxonMobil proposes the following:

- 1) Discontinuation of sampling for all supply wells currently sampled semi-annually;
- 2) Discontinuation of sampling for all but 10 of the supply wells currently sampled quarterly;
- 3) Discontinuation of sampling for all but 25 of the supply wells currently sampled monthly;
- 4) Frequency adjustments to sampling for supply wells to be retained in the program;
- 5) Removal or conveyance of ownership for 5 of the 14 point of entry treatment (POET) systems currently maintained by ExxonMobil.

2 PRIVATE SUPPLY WELL SAMPLING PROGRAM

Since 2006, more than 270 PSWs surrounding the former service station have been sampled. Private supply well sampling was initiated in February 2006 in the immediate vicinity of the station property. Based on the findings of the investigation and at the direction of the MDE, PSW sampling was expanded to include additional properties within an approximate ½ mile radius of the Site. The current sampling program, with minor adjustments, has remained essentially unchanged for the last ten years. Historical analytical results from January 2010 through December 2015 for all properties in the sampling program are included as **Appendices A and B**.

2.1 PROPOSED MODIFICATIONS TO PRIVATE SUPPLY WELL SAMPLING PROGRAM

As discussed with the MDE in December 2015, ExxonMobil proposes to scale back the private supply well sampling program to include only the 35 properties (**Appendix A**) that meet one or more of the following criteria as shown on **Figure 2** and in embedded graphics below.

- Detections since January 2013 above 10% of standard for benzene, toluene, ethylbenzene, and xylenes (BTEX); five fuel oxygenates (Oxy5) including methyl tertiary butyl ether (MTBE), diisopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tert-amyl methyl ether (TAME), and tert-butyl alcohol (TBA); or naphthalene;
- Historical detections of liquid petroleum hydrocarbons (LPH) in monitoring wells (not observed since 2008);
- Active recovery or monitoring wells installed on the property.

Based on the data presented below, ExxonMobil proposes a modified supply well sampling program to include the following elements, summarized in the table below and illustrated on **Figure 3**:

1. Continued monthly sampling of the supply well at 3627A Southside Avenue (the only supply well above standard for BTEX, Oxy5 or naphthalene);
2. Quarterly sampling of 14 properties that meet one or more of the following criteria:
 - a. Detections of BTEX, Oxy5, or naphthalene greater than 10% of standard since January 2013, not including properties with a likely alternate source;
 - b. Historical liquid petroleum hydrocarbon (LPH) detections in monitoring wells installed on the property;

- c. Properties with active recovery wells installed;
 - d. One property (3635 Southside Avenue) adjacent to 3627A Southside Avenue which has displayed a very low-level increasing trend of MTBE.
3. Semi-annual sampling of 20 properties with monitoring wells installed and which do not meet one of the criteria above for quarterly sampling.

The following would be eliminated from the PSW sampling program (**Appendix B**):

1. All properties currently sampled on a semi-annual basis (**Figure 1**). All semi-annual properties have been below 10% of the standard for BTEX, Oxy5 or naphthalene since at least January 2013, with a few exceptions that are likely attributable to alternate sources. As MDE stated of the semi-annual properties in a letter dated February 1, 2010.

“The Department finds that the sampling history demonstrates that these 130 properties have not been impacted by the ExxonMobil release to a point that nears action level for State and Federal drinking water standards. The properties have the benefit of being forewarned of future impacts above action levels by the placement and sampling of a specifically-designed monitoring well network...Further, effective investigation and remediation have been implemented that is controlling and reducing impacts to the groundwater.”

2. All but 10 properties currently sampled on a quarterly basis. All properties proposed for elimination have been below 10% of the standard for BTEX, Oxy5 and naphthalene since at least January 2013.
3. All but 25 properties currently sampled on a monthly basis. All properties proposed for elimination have been below 10% of the standard for BTEX, Oxy5 and naphthalene since at least January 2013.

2.2 SUPPORT FOR MODIFICATIONS TO CURRENT SAMPLING PROGRAM

The MDE has established standards and action levels for PSWs that it applies on a state-wide basis. These standards establish the levels which the MDE has determined to be safe for drinking water. The MDE has established a 20 µg/L action level for MTBE based on an aesthetic condition

(i.e., taste and odor), but has also determined that this 20 µg/L action level provides a large margin of safety from potential toxic effects. Thus, according to MDE, the 20 µg/L standard for MTBE is conservatively protective of potential human health concerns. As discussed below, only one supply well sampled on behalf of ExxonMobil currently has had detections of gasoline constituents above standard since June 2011 (3627A Southside Avenue).

2.2.1 PSWs with gasoline constituents above standard

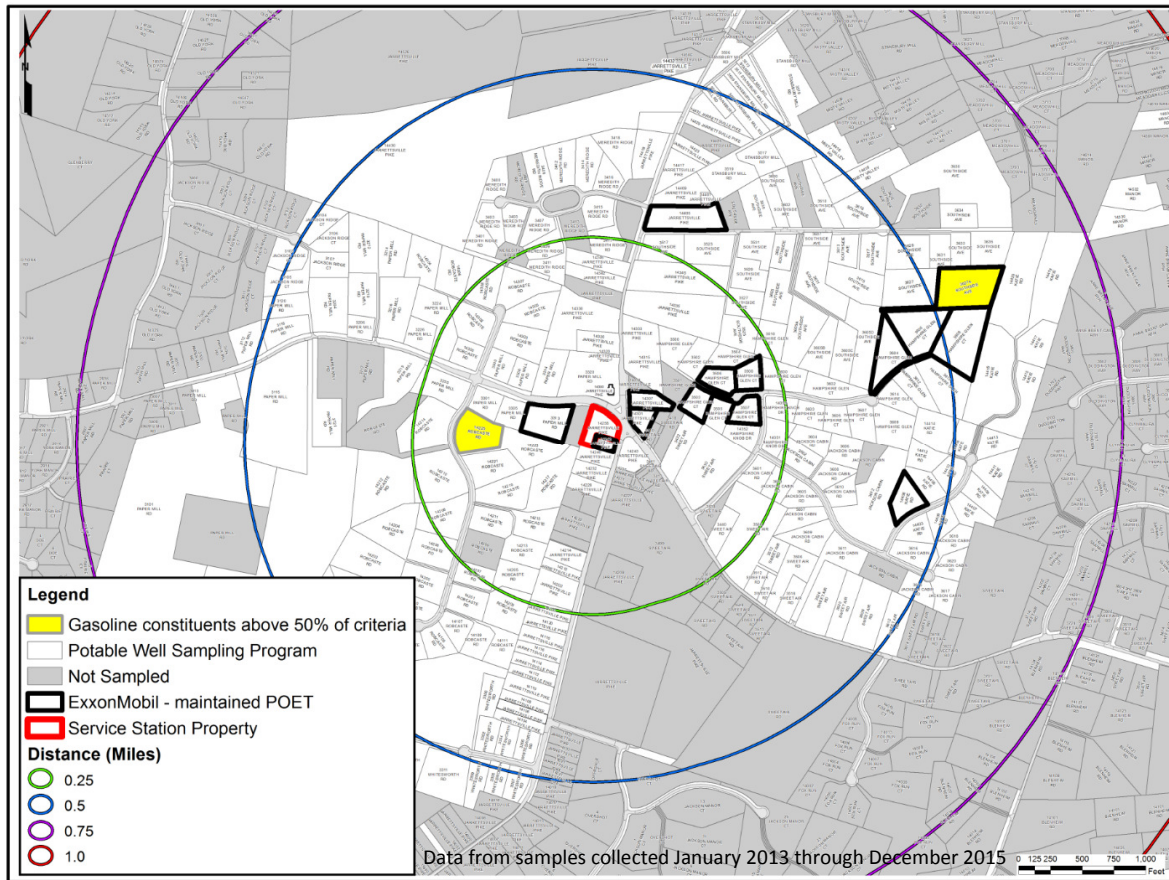

Currently 259 private supply wells are sampled on a regular schedule. Throughout the PSW sampling program, the vast majority of supply wells sampled have not exhibited methyl tertiary butyl ether (MTBE) above 1 µg/L and only 14 out of more than 270 supply wells sampled since the start of the project in 2006 have ever had detections of MTBE above the MDE standard of 20 µg/L.

Over the past five years from January 2010 through December 2015, only two supply wells sampled on behalf of ExxonMobil had detections of BTEX, five fuel oxygenates including MtBE or naphthalene above standard (3627A Southside Avenue and 14307 Jarrettsville Pike). Subsequently, the supply well at 14307 Jarrettsville Pike has been below standard since June 2011.

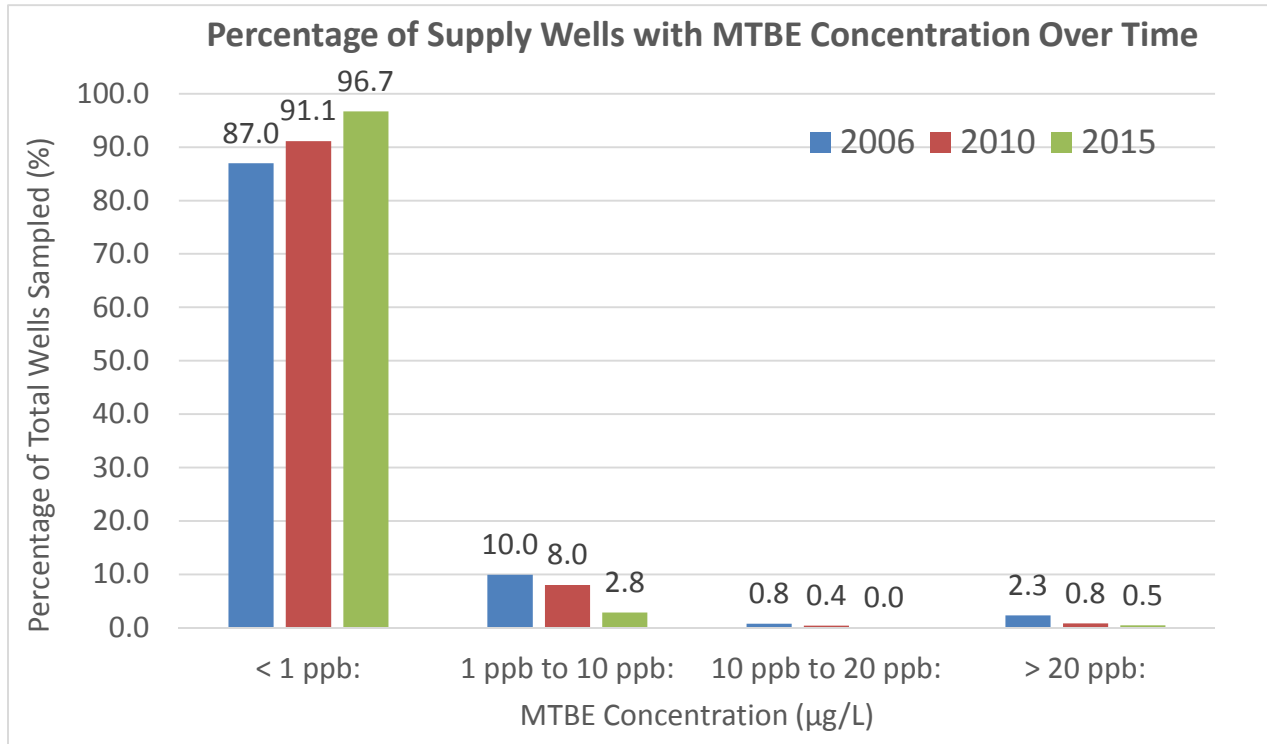

2.2.2 PSWs with gasoline constituents above 50% of standard

Since January 2013, only one supply well (3627A Southside Avenue) has exhibited gasoline constituents above standard, and only one other supply well has had detections of gasoline constituents above half of the standard (a single detection of naphthalene at 14225 Robcaste Road in April 2014, which is unlikely related to the 2006 gasoline release).

PRIVATE SUPPLY WELLS WITH GASOLINE CONSTITUENTS >50% OF STANDARD

The percentage of private supply wells with MTBE above standard (20 µg/L), above 50% of standard (10 µg/L), and above 1 µg/L have decreased over time (see chart below), while the percentage of private supply wells with MTBE below 1 µg/L has increased over time. As of the end of 2015, almost 97% of supply wells sampled had benzene between ND and 1 µg/L.

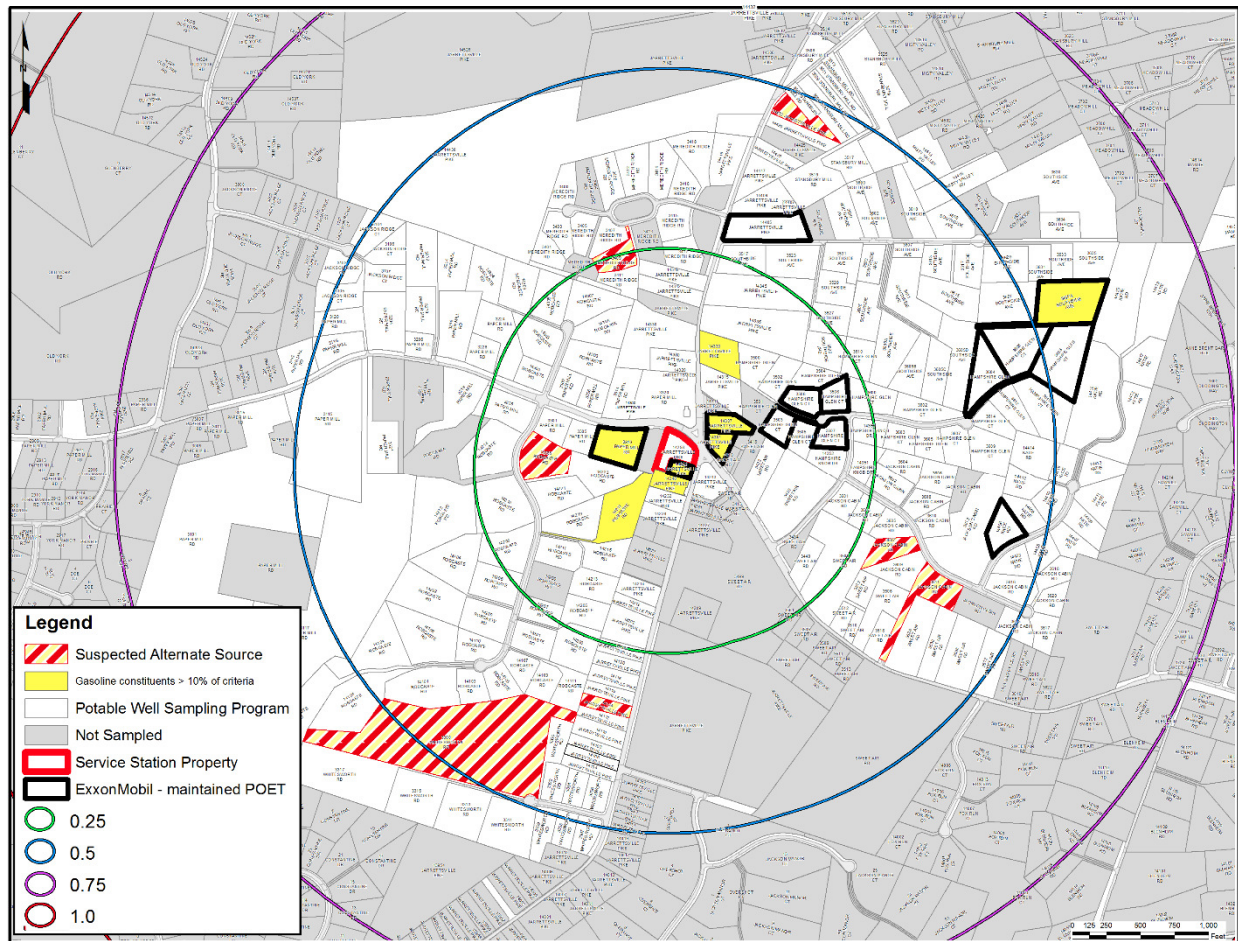

2.2.3 Properties with gasoline constituents above 10% of standard

Of the nearly 4,100 private supply well samples collected between January 2013 and December 2015, 3,994 of them were ND for gasoline constituents BTEX, Oxy-5 and naphthalene.

In fact, as of December 31, 2015, only 15 properties had supply wells with detections of gasoline constituents greater than 10% of the standard, seven of which are likely attributable to other sources.

2.3 DEEP MONITORING WELL NETWORK

In addition to the statistics presented above, the existence of a deep monitoring well network across the project footprint lends support to a reduction of private supply well sampling. When depths and locations for monitoring wells were being selected and approved starting in 2006, the depth and construction of supply wells in the area was taken into consideration. When the monitoring well network was being expanded in late 2006, several wells were proposed (MW-92C, MW-131C, MW-133C, with depths set specifically to match the depths of private supply wells or to match open intervals of area supply wells.¹

- MW-92C (400' deep) – depth based on private supply well depths in vicinity
- MW-131C (300' deep) – depth based on private supply well depths in vicinity
- MW-162A (45' deep) – depth overlaps open interval of private supply well
- MW-162B (60' deep) – depth overlaps open interval of private supply well

MDE's response to the expanded monitoring well network plan was to require an additional 25 wells be installed, several specifically targeted at mimicking the private supply well depths in the area², of which the following were ultimately installed.

- MW-135C (300' deep) – Depth based on area domestic well depths
- MW-162C (300' deep) – Depth reflects nearby domestic wells
- MW-93C (300' deep) – Depth reflects nearby domestic well depths
- MW-165C (450' deep) – Intended as sentinel monitoring of deeper zone set at a depth that coincides with nearby domestic well depths
- MW-173C (500' deep) – Depth of C well reflects nearby domestic well depths
- MW-128C (400' deep) – Supplement wells MW-128A and MW-128B and monitor deeper zone at depth based on nearby domestic well depth

Two wells MDE originally required (MDE-12C and MDE-10C) were ultimately replaced in the sampling program by the unused supply wells at 14209 Robcaste Road and 3418 Sweet Air Road respectively.

An additional inner and outer array of deep D-zone wells was installed in 2014 to further expand the ability to monitor groundwater at depths greater than 350' below ground surface (bgs), similar to the depths of area supply wells.

In summary, the PSW analytical data collected over the last decade, combined with the extensive monitoring well network in place, support a reduction in the PSW sampling program to eliminate sampling of properties that have been well below MDE's conservative drinking water standards for years.

3 POINT OF ENTRY TREATMENT (POET) SYSTEMS

ExxonMobil currently maintains 14 POET systems within 0.75 miles of the former service station property (**Figure 1**). A brief history of POETs is below.

3.1 POET HISTORY

Based on sampling conducted between February and June 2006, nine supply wells had concentrations of MTBE above the MDE action level of 20 micrograms per liter ($\mu\text{g/L}$). The supply wells on these nine properties were provided with POETs between March and August 2006. In 2007 and 2008, five additional POETs were installed as a precautionary measure. No other treatment systems were installed until October 2013, when a POET was installed as a precautionary measure at 3627A Southside Avenue due to increasing MtBE concentrations identified via the private supply well sampling program.

Currently only one private supply well with a POET maintained by ExxonMobil (3627A Southside Avenue) has concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX), five fuel oxygenates including MTBE or naphthalene above MDE standards or action levels.

The table below provides a summary of the locations, installation date, and the maximum concentration of MTBE detected, along with the date. Only one private supply well with an ExxonMobil-installed POET currently has MTBE above standard. Three supply wells with POETs have never had MTBE above standard since sampling began, and the others have all been below standard since at least the end of 2011.

*14301 JVP had a reading of 773,000 ppm for MTBE on 3/3/06; this supply well was subsequently abandoned and the property was connected to the supply well located on 3410 Sweet Air Road.

¹Ownership of the POET at 3605B Southside Avenue was conveyed to the property owner on 1/21/2011 as part of the "Water Supply Well Installation and Connection Agreement Release."

3.2 POET REMOVAL / OWNERSHIP CONVEYANCE

ExxonMobil currently maintains 14 POETs in the project area (within $\frac{3}{4}$ of a mile of the station property). Of these 14, four have never had detections of MTBE above the 20 $\mu\text{g/L}$ MDE standard. One has been below standard since 2006, and four have been below standard since 2007. Only one supply well with a POET installed by ExxonMobil (3627A Southside Avenue) has been above standard in the last four years (since January 2012). Nine of the supply wells with currently-maintained POETs have been below 10% of standard for gasoline constituents since at least January 2013.

ExxonMobil proposes to either convey ownership or remove the following POETs, per the property owner's preference:

1. 14406 Katie Road – below standard for MTBE since January 2007; below 10% of standard for gasoline constituents since at least January 2013; no active recovery on the property; proposed for discontinuation of POET sampling.
2. 14405 Jarrettsville Pike – below standard for MTBE since August 2008; below 10% of standard for gasoline constituents since at least January 2013; no active recovery on the property; proposed for discontinuation of POET sampling.
3. 3608 Hampshire Glen Court – non-detect for MTBE since sampling started in 2006; below 10% of standard for gasoline constituents since at least January 2013; no active recovery on the property; proposed for discontinuation of POET sampling.
4. 3604 Hampshire Glen Court – below standard for MTBE since November 2007; below 10% of standard for gasoline constituents since at least January 2013; no active recovery on the property; proposed for discontinuation of POET sampling.
5. 3507 Hampshire Glen Court – below standard for MTBE since June 2007; no active recovery on the property; proposed for discontinuation of POET sampling.

A draft resident letter and POET Keep/Remove form are included as **Appendix C**.

ExxonMobil will continue to maintain the 9 POETs installed at properties being retained in the POET sampling program:

3606 Hampshire Glen Court
3503 Hampshire Glen Court

3506 Hampshire Glen Court

4 CONCLUSION

Upon MDE's approval of this work plan, and following notification of residents, ExxonMobil, will adjust the PSW sampling schedule accordingly. Reporting of supply well sampling to the MDE will continue quarterly in the currently-approved format. ExxonMobil will also report under separate cover, the status of POET removals or ownership transfers, per each property owner's preference.

**Re: Point of Entry Treatment (POET) System
Address
Phoenix, MD 21131**

Dear Name,

As you are aware, for approximately ten years, ExxonMobil has been conducting a groundwater investigation associated with the former Jacksonville Exxon station. As part of that investigation we sampled private supply wells within an approximately one-half mile radius of the former station site. Since [year], your private supply well has been fitted with a point-of-entry treatment (POET) system, maintained by ExxonMobil.

Analysis of the extensive hydrogeological information produced by the groundwater investigation has enabled us to better understand the overall nature, extent and distribution of the gasoline contamination. The data from sampling your drinking water well indicate no gasoline constituents are present above MDE's state action levels. As a result of ExxonMobil's investigation and the sampling results from your well, we do not believe that gasoline constituents above the MDE's state action levels will be detected in your well in the future.

Attached to this letter is a table showing analytical results for gasoline constituents in samples collected from your supply well since January 2010. ExxonMobil has determined there is no need to continue to provide your home with a POET system and MDE has approved the POET's removal or transfer of ownership.

ExxonMobil will either remove the POET from your home at no cost to you, or convey ownership of the POET in as-is condition, including all future maintenance and/or removal. Included with this letter is a Return Form for you to indicate whether you want ExxonMobil to remove the POET system from your home or let us know if you choose to keep it. Please complete the form indicating your preference, place it in the enclosed, pre-addressed, postage-paid envelope and

mail. If you do not complete and return the enclosed form by [DATE], we will assume that you have chosen to keep the POET system and ExxonMobil will convey the POET system to you in its current "as is" condition with the understanding that you will be responsible for any maintenance that may be needed, including removal.

If you have any questions, please feel free to contact the undersigned at 410.850.0404.

Sincerely,

KLEINFELDER

Mark J. Schaaf C.P.G.
