SUMMARY

Dear Mr. Ralston:

Kleinfelder, on behalf of ExxonMobil, is submitting to the Maryland Department of the Environment (MDE) the following report of results and workplan requests for the above-referenced project area related to MDE Case #2006-0303-BA2:

The report is divided into sub-sections as outlined below:

1. **Remediation Program**
 - A. 2019 Sequential Recovery Well (RW) Conversion Report of Results
 - B. Dual-Phase Extraction (DPE) system shutdown request
 - C. 2020 RW conversion request

2. **Monitoring Program**
 - A. Monitoring well (MW) abandonment request
 - B. Groundwater monitoring program reduction request

Remediation Program Changes

The main supporting points for remediation program changes include:

1.B. Dual-phase extraction system shutdown request

- The DPE system vapor influent has been non-detect for almost 3 years (Table 2).

- DPE RWs will be converted/retained for groundwater recovery with pneumatic pumps. One of the DPE wells (MW-13) is proposed for conversion to a MW later in 2020.

- The DPE system has been sensitive to electrical fluctuations and has experienced many shutdown events with no observed adverse rebound detections in nearby wells.

1.C. 2020 RW Conversion Request

- After 7 prior RW conversion events, no sustained or significant rebound effect has been observed. At the end of 2019, of the 32 recovery wells, only 9 had concentrations of methyl-tertiary butyl ether (MtBE) / benzene, toluene, ethylbenzene, and xylenes (BTEX) above MDE action levels (Table 1). Sixteen RWs are proposed to be retained for on-going groundwater recovery.
- For several months in 2019, the combined groundwater influent concentration was below the MDE drinking water standard for MtBE of 20 ug/L (Table 3). Several months had influent concentration below 10 ug/L.
- Continuing to progressively convert eligible RWs to MWs will allow monitoring of potential adverse conditions in former remediation areas.

Groundwater Monitoring Program Changes

The requested changes to the groundwater monitoring program include reductions in groundwater sampling and gauging and a reduction in the number of MWs retained for the project. The primary objective for these proposed reductions and abandonments is to better align the extent and frequency of groundwater monitoring with the current aquifer conditions while retaining an appropriate network of wells for both potentiometric surface mapping and post-remedial monitoring. The main supporting points for groundwater monitoring program changes include:

2.A. Monitoring well abandonment request

- For >5 years (with only two exceptions¹), all MWs southwest of the former station property have been below MDE action levels (Table 1).
- Based on fourth quarter 2019 data, of the 143 RWs / MWs on and to the northeast of the former station property, only 11 had detections above MDE action levels (Tables 6 and 7).
- Nine wells originally installed well beyond the strike-line for cross-gradient delineation purposes (e.g., “Outer Array” or “Inner Array”) continue to be sampled despite never

¹ The two exceptions are MW-29 and MW-40, having had in the last five years 3 and 4 detections respectively.

exhibiting impact above MDE action levels (Table 1). These wells have tested and verify the conceptual model across a time span when significantly higher concentrations existed.

- Based on fourth quarter 2019 data, only 12 of the 227 wells (RWs + MWs) retained on the project exhibited concentrations above MDE action levels for BTEX/MtBE (Tables 6 and 7). A total of 86 wells are requested for abandonment. Thus, 142 wells will be retained for the final stages of remediation activity and available for post-remedial monitoring (Figure 6).

2.B. Groundwater monitoring program reduction request

- After 14 years of monitoring and data collection, with earlier periods of much higher concentrations and having experienced the full range of both hydrogeological conditions and precipitation events, the Site Conceptual Model is well understood, fully tested, and supports that cross-gradient wells have not to-date been impacted (Table 1). The likelihood of future impact in these cross-gradient areas is minimal. This supports reduced sampling (and some abandonment) of wells not located within the historical “strike-line” band of contaminant migration while still retaining select cross-gradient wells for post-remedial monitoring and potentiometric surface mapping.
- Of the 980 groundwater samples collected in 2019, 83% were below MDE action levels for BTEX/MtBE (Table 1).
- There are currently 227 wells remaining on the project. Of these, 96 are actively sampled MWs, 32 are sampled RWs, and 99 are retained for potentiometric mapping or potential future use. In 2019, of the 96 actively sampled MWs (not RWs) only 10 MWs or 9.6% returned analytical results above the MDE drinking water standards for BTEX and/or MtBE (see highlighting in Table 6).

1 REMEDIATION PROGRAM

Remediation program:

- 1.A. 2019 RW Conversion Report of Results
- 1.B. DPE System Shutdown
- 1.C. 2020 Select RW Conversions

1.A. 2019 SEQUENTIAL CONVERSION OF SELECT RECOVERY WELLS REPORT OF RESULTS

- No sustained rebound concentrations were observed in the vicinity or downgradient of converted wells following cessation of groundwater recovery (Table 4 and Attachment B).
- Based on the absence of any sustained rebound of concentrations above action levels, the wells which were converted from recovery to monitoring wells have remained offline and continue to be gauged and sampled according to the MDE-approved schedule.

In accordance with the *Sequential Conversion of Select Wells Report of Results and Proposed Work Plan* (March 2019 Work Plan)² and the corresponding MDE approval (May 2019)³, four groups of recovery wells were converted to MWs between June and October 2019 (see table below). MW-183 was observed to have MtBE concentrations above 20 µg/L in the time following MDE’s approval of the above-referenced workplan and therefore was not converted and remains a RW. A total of 16 of the approved 17 RWs were converted to MWs.⁴

Conversion Group No.	Date Converted / Redeveloped
1	June 25, 2019
2	July 8, 2019
3	August 14, 2019
4	October 2, 2019

² Kleinfelder, *Sequential Conversion of Select Wells Report of Results and Proposed Work Plan*, March 21, 2019.

³ MDE, *Approval of Sequential Conversion of Select Wells, Report of Results and Work Plan*, May 24, 2019.

⁴ In addition, MW-155, which had an inoperable pump stuck inside, was reclassified as a MW.

Converted wells and wells designated for additional monitoring were gauged and sampled monthly through December 2019. Following the third round of post-conversion sampling in December 2019, all wells were returned to their previously established MDE-approved sampling frequency.

Groundwater analytical data showed minimal changes in concentrations of MTBE and BTEX in converted wells and in surrounding wells (Table 4 and Attachment B).

Charts depicting concentration and groundwater elevation over time for the converted wells are presented as Attachment B. Based on the absence of any sustained rebound of concentrations above action levels, the wells which were converted from recovery to monitoring wells have remained offline, leaving 32 RWs at the end of 2019.

1.B. DUAL-PHASE EXTRACTION SYSTEM (DPE) SHUTDOWN

Lines of evidence supporting shutdown of the DPE system include:

- The DPE system vapor influent has been non-detect for almost 3 years (Table 2), indicating the DPE system vapor recovery is operating at asymptotic conditions.
- DPE RWs will be converted/retained for groundwater recovery with pneumatic pumps. One of the DPE wells (MW-13) is proposed for conversion to a MW later in 2020.
- The DPE system has been sensitive to electrical fluctuations and has experienced many shutdown events with no observed adverse rebound detections in nearby wells.

A DPE system has been operating at the former service station property since 2006. Recovery wells connected to this DPE system include onsite wells MW-3, MW-13, MW-16, MW-27, and intersection wells MW-187A, MW-187B, and MW-187C. Figure 2 shows the location of DPE connected wells and the DPE unit onsite. The DPE system only supports vapor extraction from the three MW-187 wells, which currently use pneumatic pumps for groundwater recovery.

Based on the air-bag analytical data, for over 5 years, DPE vapor recovery has been negligible, apart from Dec 2017-Jan 2018 (Table 2). The petroleum hydrocarbon in vapor recovery rate is

indicative of asymptotic conditions and therefore the continued extraction of vapors via the DPE system is not providing remedial benefit.

Upon receipt of MDE approval and prior to the start of 2020 RW to MW conversions (detailed below), the DPE system will be shut down and the DPE groundwater stingers currently installed in MW-3, MW-13, MW-16, and MW-27 are proposed to be replaced with pneumatic pumps.

1.C. PROPOSED SEQUENTIAL RECOVERY WELL CONVERSIONS

Lines of evidence supporting 16 additional RW conversions include:

- Based on the 7 prior RW conversion events, a sustained or significant rebound effect has not been observed (Table 1).
- For several months in 2019, the combined groundwater influent concentration was below the MDE drinking water standard for MtBE of 20 ug/L (Table 3). Several months had influent concentration below 10 ug/L.
- Five RWs meet the Flowchart 1 criteria for rebound assessment (Attachment A).
- Eleven RWs meet the Flowchart 1 criteria with a few periodic exceedances above MDE drinking water standards (Attachment A).

Following the 2019 conversions, there are 32 remaining active RWs across the project area. Of these, 16 are being proposed for conversion, leaving 16 to be retained as RWs.

Details for the 16 RWs proposed for conversion, including rationale, are summarized in the table below:

Group	Well ID	Rationale for Conversion to Monitoring Well (Concentration Values in µg/L)	Total Depth	Screen/Open Interval
1	MW-4	MtBE <20 µg/L since December 2018 Benzene <5 µg/L since June 2012	50'	15-50'
	MW-27R	MtBE <20 µg/L since September 2018 (with exception of 38 µg/L on 12/3/18, 74 µg/L on 2/19/19, and 32 µg/L on 2/25/19) Benzene > 5 µg/L since September 2018 (with the exception of 10 µg/L on 12/3/18 and 6 µg/L on 2/19/19)	60'	30-60'
	MW-37	MtBE <20 µg/L since May 2018 Benzene <5 µg/L since March 2011	100'	40-96'
	MW-82R	MtBE <20 µg/L since April 2017 (with exception of 20 µg/L on 12/31/18 and 32 µg/L on 1/9/19) Benzene <5 µg/L since February 2011	46'	3-38'
	MW-89	MtBE <20 µg/L since May 2018 Benzene <5 µg/L since December 2010	40'	10-40'
	MW-121	MtBE <20 µg/L since June 2011 (with exception of 45 µg/L on 2/22/19, and 79 µg/L on 3/4/19) Benzene <5 µg/L since February 2010	60'	35-60'
2	MW-7	MtBE <20 µg/L since December 2018 (with exception of 39 µg/L on 2/2/19) Benzene <5 µg/L since June 2015	55'	20-55'
	MW-13	MtBE <20 µg/L since December 2018 Benzene <5 µg/L since December 2017	35'	25-35'
	MW-176	MtBE <20 µg/L since April 2017 Benzene <5 µg/L since March 2011	250.1'	125-250.1'
	MW-184	MtBE <20 µg/L since April 2018 (with exception of 42 µg/L on 1/8/19, and 35 µg/L on 7/22/19) Benzene never above 5 µg/L	300'	100-300'
	SVE-2	MtBE <20 µg/L since June 2015 (with exception of 56 µg/L on 9/21/17, 61 µg/L on 8/24/18, and 25 µg/L on 2/1/19) Benzene <5 µg/L since June 2014	70.75'	25-70.75'
3	MW-59B	MtBE <20 µg/L since June 2019 (with exception of 26 µg/L on 10/9/19) Benzene <5 µg/L since August 2018	55'	45-55'
	MW-82B	MtBE <20 µg/L since September 2016 (with exception of 70 µg/L on 10/25/18, 25 µg/L on 12/31/18, 28 µg/L on 1/8/19, and 22 µg/L on 3/14/19) Benzene <5 µg/L since October 2014	125'	50-125'
	MW-151	MtBE <20 µg/L since December 2014 Benzene <5 µg/L since September 2010	60'	35-60'
	MW-183	MtBE <20 µg/L since January 2018 (with exception of 61 µg/L on 3/13/19, 80 µg/L on 5/2/19, and 39 µg/L on 6/14/19) Benzene <5 µg/L since August 2017	300'	100-300'
	SVE-3	MtBE <20 µg/L since August 2018 (with exception of 20 µg/L on 12/27/18, 48 µg/L on 4/22/19, 140 µg/L on 10/15/19, and 60 µg/L on 11/6/19) Benzene <5 µg/L since March 2018 (with exception of 5 µg/L on 4/22/19 and 11 µg/L on 10/15/19)	69'	24-69'

Historical analytical data for the 16 RWs proposed for conversion are presented in Table 5 and their locations are presented on Figure 2. Well construction details for all wells in the project area are included in Attachment C.

Implementation

Recovery wells are proposed to be converted to MWs in 3 groups as listed in the first column in the table above and under the table below. All wells in a group will be shut down concurrently, and one group of wells will be shutdown per month. Groups are organized so RWs to be shut down are interspersed with on-going pumping wells to promote gradual changes across the aquifer. This sequence is proposed to promote gradual changes to the existing hydraulic conditions, prolong downgradient recovery, and allow potential hydraulic effects on the former station property to be observed.

 Shutdown
 Monitor

Group	Month 1		Month 2		Month 3		Month 4		Month 5	
	Week 1	Week 3	Week 1	Week 3	Week 1	Week 3	Week 1	Week 3	Week 1	Week 3
1	Shutdown	Monitor		Monitor		Monitor				Monitor
2			Shutdown	Monitor		Monitor		Monitor		Monitor
3					Shutdown	Monitor		Monitor		Monitor
Nearby wells		Monitor		Monitor		Monitor		Monitor		Monitor

Group 1 RWs –MW-4, MW-27R, MW-37, MW-82R, MW-89, MW-121

Group 2 RWs – MW-7, MW-13, MW-176, MW-184, SVE-2

Group 3 RWs –MW-59B, MW-82B, MW-151, MW-183, SVE-3

After removing the pump, each recovery well will be redeveloped prior to the first monitoring event using a surge block and a sediment/fluid remover. The well will be agitated using a surge block to flush and mobilize sediment. A submersible pump will then be used to evacuate water and suspended sediment from the well. At least five well volumes of fluid will be removed, or until water being discharged demonstrates minimal turbidity (whichever comes first).

Once offline, the wells in each group will be monitored (sampled and gauged) monthly for three consecutive months after shutdown. The first monitoring event will be conducted approximately two weeks after wells are taken off-line and redeveloped. The subsequent monitoring events will be conducted at approximately one-month intervals after the initial sampling event.

Ten interspersed monitoring wells (MW-24, MW-77A, MW-80B, MW-84, MW-91C, MW-137, MW-168, MW-180A, MW-181A, MW187A) will be gauged and sampled monthly during the sequential well conversion and related monitoring period (starting after the first group is shut off, and for three months following shut-off of the third group). After completion of the proposed well conversion and monitoring activities, these 10 wells will return to the MDE-approved monitoring schedule.

Groundwater analytical and potentiometric data will be evaluated throughout the sequential shutdown period as described above. If a recovery well conversion results in concentration rebound above action levels for three consecutive sampling events, we will notify the MDE and determine if recovery is necessary. A summary report will be provided to the MDE within 45 days following the conclusion of the sequential shut-down monitoring period and receipt of analytical data.

2 MONITORING PROGRAM

The proposed groundwater monitoring changes and MW abandonments include:

1. Of the 101 MWs proposed for continued sampling, 35 are proposed for reduced frequency, including annual sampling for a select group of wells southwest of the former station property;
2. Conversion of four MWs to gauge-only;
3. Conversion of three MWs to no activity and retained for potential future use;
4. Abandonment of 86 MWs, including all piezometer or “P” wells.

Current and Proposed MW Status

	Current Total	Net Change	New Total
TOTAL MWs INSTALLED (I+II)	309	0	309
I. Abandoned MWs	82	+86	168
II. Existing Wells (A+B+C)	227	-86	141
A. MWs not sampled, not gauged, not abandoned	43	-32	11
B. MWs sampled (including recovery wells) (1+2+3)	128	-27	101
1. Sampled Quarterly	102	-43	59
2. Sampled Semi-Annually	26	+2	28
3. Sampled Annually	0	+14	14
C. MWs gauge-only	56	-27	29

2.A. MONITORING WELL ABANDONMENT REQUEST

Lines of evidence supporting MW abandonments include:

- 25 MWs proposed for abandonment are located southwest of the former station property; remediation has been complete for 4 years southwest of the former station property; there have been no detections of gasoline constituents above MDE action levels to the southwest of the former station property for >5 years (except for MW-40 and MW-29);

wells proposed for abandonment southwest of the former station property have not had a reported exceedance for over 7 years; seven have never had an exceedance (Table 1).

- 15 wells proposed for abandonment are P-wells or “Piezometer wells”; P-wells have not demonstrated any significant difference in concentration compared with their corresponding MWs (Table 1).

Per Flowchart 2 (Attachment A), MWs that meet the following criteria are eligible for abandonment:

1. Concentrations below MDE standards for gasoline constituents for > 1 year;
2. Not needed for potentiometric maps;
3. Not needed for rebound monitoring.

All 86 MWs proposed for abandonment (Figure 3 and Attachments D and E) have been below MDE action levels for gasoline constituents for at least two (2) years (Tables 6 and 7), with 79 of 86 below action levels for more than 5 years (Table 1). The 86 MWs are not required for potentiometric surface mapping or RW conversion sampling. Attachments D and E provide the selection rationale for these 86 wells and identify nearby wells of comparable construction to be retained for either ongoing or future sampling.

There are currently 227 wells in the project area; as mentioned above, 86 are proposed for abandonment and 32 are proposed for ongoing groundwater recovery (16 of these are part of the proposed RW conversions discussed above). Of the remaining 109 MWs, 69 MWs will be retained in the sampling program (along or directly adjacent to the strike line) and 40 wells will be retained for groundwater gauging only or possibly for future post-remedial sampling (Attachments D and E, Figure 6).

The reduced groundwater sampling program will continue to provide an extensive network to monitor groundwater concentrations, demonstrate ongoing remediation progress, and indicate if remediation changes should be considered. Some select side-gradient and southwest down-gradient MWs have been retained for future groundwater monitoring coverage (Figure 6).

Table 8 provides address and property owner information for all properties with wells proposed for abandonment.

2.B. GROUNDWATER MONITORING PROGRAM REDUCTION REQUEST

Lines of evidence supporting a reduction in the groundwater monitoring program include:

- The current concentration distribution is well characterized and isolated to a few discrete areas within the current expansive monitoring well network; much of the data collected from the current monitoring network beyond the remaining impacted areas is no longer useful in evaluating remediation progress (Table 1);
- An on-going decreasing concentration trend exists across the project area (Table 1);
- There has been only one substantive round of sampling reductions over the past 14 years.

Across the project area at the beginning of 2020, there are 227 wells (Figure 6 and Attachment C). This includes 32 recovery wells (RWs), 180 MWs, and 15 piezometers. Proposed modifications to the groundwater monitoring program are consistent with the June 2018 Court Order (Attachment A).

Groundwater sampling frequency adjustments are proposed for 35 wells, including annual-only sampling of wells located south and southwest of the former station property where remediation and post-remediation monitoring activity is completed (Figure 5 and Attachments D and E). RWs will continue to be sampled on a quarterly basis, and wells proposed for potentiometric surface mapping (Figure 4) will be gauged quarterly (regardless of sampling schedule).

Current monitoring activities can be seen on Figure 5 and proposed activities are presented on Figure 6.

RWs proposed for conversion to MWs in Section 1 above (and the associated MWs for conversion monitoring) will be sampled according to the approved conversion sampling program. These converted RWs (and associated MWs used in conversion sampling) are proposed to revert to sampling frequencies listed in Attachments D and E once conversion sampling is completed.

3 SUMMARY OF PROPOSED CHANGES

This document proposes the following changes:

1. Remediation

- Shutdown of the DPE system
- Conversion of 16 RWs

2. Monitoring

- Abandonment of 85 MWs
- Groundwater monitoring reductions

A comparison of current and proposed activities related to the MW network is summarized below.

	Current	Proposed
Total Wells	227	141
MW Sampling (not including RWs)	96	85
<i>Quarterly</i>	70	43
<i>Semi-Annual</i>	26	28
<i>Annual</i>	0	14
RWs	32	16
GWG-only	56	29
Retained for future use	43	11

Upon receipt, Kleinfelder on behalf of ExxonMobil will initiate the MDE-approved changes to the project scope of work. Kleinfelder will continue to evaluate the analytical data and notify the MDE regarding any change in conditions, data anomalies and/or the implementation of the approved work.

LIMITATIONS

Kleinfelder performed the services for this project under the Enabling Agreement with Procurement, a division of ExxonMobil Global Services Company (signed on July 22, 2016). Kleinfelder states that the services provided are consistent with professional standard of care

defined as that level of services provided by similar professionals under like circumstances. This report is based on the regulatory standards in effect on the date of the report. It has been produced for the primary benefit of ExxonMobil Global Services Company and its affiliates.
