Introduction

As required by the Maryland Department of the Environment (MDE), Advantage Environmental Consultants, LLC (AEC) has completed sampling of the groundwater monitoring wells and the On-Site potable well in accordance with Code of Maryland Regulations (COMAR) 26.10.01.03-4 and "Regulatory Letter" for Case # 2011-0729-CE.

Figure 1 in Attachment A illustrates the Site vicinity. Figure 2 in Attachment A illustrates the groundwater monitoring well, tank field monitoring pipes (TFMPs), and On-Site potable well locations. The following is a description of this work and the results of the recent groundwater sampling effort.

Groundwater Gauging, Sampling, and Analysis

Groundwater levels within each monitoring well were measured using a water level indicator accurate to 0.01 feet. The water level indicator was cleaned (Alconox and water rinse) prior to use in each well. Each monitoring well was checked for the presence of liquid phase hydrocarbons (LPH) using a dedicated, disposable sampling bailer. No LPH was observed in any of the monitoring wells. Monitoring well gauging data is summarized in Table 1 of Attachment B and on Figure 3 of Attachment A.

The groundwater samples were collected on May 16, 2022 and analyzed according to Environmental Protection Agency (EPA) protocols. Groundwater samples were collected from the monitoring wells by first gauging and purging at least three well volumes using a PVC bailer which was cleaned prior to use in each well. After purging, each well was allowed to recharge for a period of at least one hour prior to sampling. The monitoring well samples were collected using a dedicated disposable sampling bailer. Each sample was placed in 40-milliliter glass vials with Teflon-lined septa and preserved with hydrochloric acid, as appropriate. Once collected, the samples were placed on ice in a cooler to await shipment to the laboratory. The samples were analyzed for volatile organic compounds (VOCs) including fuel oxygenates per EPA Method 8260.

Laboratory analytical results from monitoring well MW-1R show that all analytes were below laboratory quantitation limits (BQL).

Laboratory analytical results from monitoring well MW-2 show that all analytes were BQL.

Laboratory analytical results from monitoring well MW-4 show that all analytes were BQL.

Laboratory analytical results from monitoring well MW-6 show that all analytes were BQL.

Laboratory analytical results from monitoring well MW-8 show that all analytes were BQL.

Laboratory analytical results from monitoring well MW-9 show a concentration of benzene below the MDE Generic Numeric Cleanup Standard for Type I and II Aquifers (i.e., the Regulatory Standard) and naphthalene above the Regulatory Standard. All other analytes were BQL.

A Groundwater Quality Map is included as Figure 4 in Attachment A. A Benzene Isocontour Map is included as Figure 5 in Attachment A. A Naphthalene Isocontour Map is included as Figure 6 in Attachment A. Table 2 in Attachment B summarizes current and historical groundwater analytical results. Historical groundwater analytical results for each sampled monitoring well are depicted on graphs in Attachment C. The laboratory analytical report is included in Attachment D.

On-Site Potable Well/Point of Entry Treatment Sampling and Analysis

Samples from the potable well point of entry treatment (POET) system were collected on February 2, 2022 and May 16, 2022 from the system's influent (PW-1), midpoints (PW-2a and PW-2b), and effluent (PW-3). All potable well samples were obtained after purging the system for 15 minutes.

Each sample was placed in 40-milliliter glass vials with Teflon-lined septa and preserved with hydrochloric acid, as appropriate. Once collected, the samples were placed on ice in a cooler to await shipment to the laboratory. The samples were analyzed for VOCs including fuel oxygenates per EPA Method 524.2. The sampling was conducted by AEC staff, certified by the MDE to collect public drinking water samples. Water Sampler Certification information is included in Attachment E.

Laboratory analytical results for POET sample PW-1 show concentrations of methyl tert-butyl ether (MTBE) below the Regulatory Standard on both sample dates. All other analytes were BQL.

Laboratory analytical results for POET sample PW-2a show a concentration of MTBE on both sample dates and chloromethane (May 16, 2022 only) below the Regulatory Standard. All other analytes were BQL.

Laboratory analytical results for POET sample PW-2b show a concentration of toluene (February 2, 2022 only) and chloromethane (May 16, 2022 only) below the Regulatory Standard. All other analytes were BQL.

Laboratory analytical results for POET sample PW-3 show a concentration of chloromethane (May 16, 2022 only) below the Regulatory Standard. All other analytes were BQL.

Table 3 in Attachment B summarizes current and historical On-Site potable well analytical results.

Tank Field Monitoring Pipe Evaluation

AEC performed a semiannual evaluation of the TFMPs. AEC screened each TFMP with a photoionization detector (PID) for the presence of petroleum hydrocarbon vapors. A plastic covering was securely fastened over each TFMP, and allowed to sit for a period of 15 minutes. The plastic barrier was then punctured with the PID nozzle, and a reading was taken. No hydrocarbon vapors were detected in TP-1, TP-2, TP-3, or TP-4. The

TFMPs were gauged for depth-to-water using a water level indicator and checked for the presence of LPH using a dedicated, disposable sampling bailer. LPH was not detected in any of the TFMPs.

LPH = Liquid Phase Hydrocarbon
TOC = Top of Casing Elevation
NA = Not Applicable
ND = None Detected
NG = Not Gauged
NM = Not Measured
Vacuum pressure readings measured in inches of water
> symbol for vacuum readings indicates the reading exceeded the limits of the gauging equipment.
Corrected water elevation based on LPH density of 0.7 grams per milliliter

NA - Not Analyzed

TPH GRO and DRO results in parts per million or mg/l

BTEX, MTBE, and Naphthalene, Acetone, MEK, 1,2-Dichloroethane, PCE, Carbon Disulfide, and Isopropylbenzene results in parts per billion or ug/l

BQL = Below Quantitation Limits (prior to 2018). Shown as <detection limit since 2018.

800,000 = Not sampled due to presence of liquid phase hydrocarbon (Value Assigned for Graphing Purposes)

As per the MDE Directive Letter, dated May 29, 2013 groundwater quality graphs were constructed using a log scale that was consistent for all wells.

As such, the aforementione values assigned for graphing purposes were used

B = Benzene; T = Toluene; E = Ethylbenzene; X = Xylene

MTBE = Methyl-tert-butyl-ether

Naph = Naphthalene

IPB = Isopropylbenzene

PCE = Tetrachloroethene

TCE = Trichloroethene

1,2-DCE = 1,2-dichloroethane

TPH GRO = Total Petroleum Hydrocarbons Gasoline Range Organics

TPH DRO = Total Petroleum Hydrocarbons Diesel Range Organics

NS = Not Sampled

This table presents all applicable dissolved phase constituents included in the quantifiable clean-up standards established by the Maryland Department of the Environment (MDE)

Some compounds may have been detected but are not tabulated on this spreadsheet as they do not have a quantifiable cleanup standard established by the MDE

See laboratory analytical results reports for full results.

MDE Standards (Generic Numeric Cleanup Standards for Groundwater and Soil - Interim Final Guidance Update No. 3.0 - October 2018)

Bold Denotes Regulatory Exceedance

Denotes Estimated Value

NRS = No Regulatory Standard
