Re: Potable Well Sampling Results
3921 Greenpeak Rd, Jarrettsville, MD 21084

Dear Mr. Goldstein:

Groundwater & Environmental Services, Inc. (GES), on behalf of High's of Baltimore, would like to thank you for your cooperation in allowing us to conduct sampling of your drinking water well on August 22, 2014.

The water sample from your well was tested in accordance to USEPA standards for the presence of several petroleum related compounds including methyl tertiary butyl ether (MTBE). The results from the most recent sampling event demonstrate a detection of MTBE in your well water at a concentration of 20.8 micrograms per liter ($\mu\text{g/L}$). This detected concentration exceeds the Maryland Department of the Environment (MDE) action level for MTBE at 20.0 $\mu\text{g/L}$. The MDE has been notified of your recently detected MTBE concentration and we await their response on the matter. A copy of the laboratory analysis report for the August 22, 2014 sampling event is attached to this correspondence.

The tests conducted on your drinking water well are part of an ongoing groundwater investigation being conducted in cooperation with the MDE and the Harford County Health Department (HCHD). Therefore we would like to continue sampling the water from your drinking water well on a periodic basis while the groundwater investigation is being conducted. We will notify you in advance of the next scheduled sampling event.

If you have any questions concerning this sampling event, please feel free to contact me at 800-220-3606, Ext. 3726. You may also contact Ms. Jeannette DeBartolomeo or Mrs. Susan Bull of the MDE at 410-537-3427 or 410-537-3499, respectively.

Sincerely,
GROUNDWATER & ENVIRONMENTAL SERVICES, INC.

A handwritten signature in black ink, appearing to read 'Pete Reichardt', is written over a light blue horizontal line.

U Analyte included in the analysis, but not detected

Definitions

If surrogate values are not within the indicated range, then the results are considered to be estimated.

Reporting limits are adjusted accordingly when samples are analyzed at a dilution due to the matrix.

The following analyses are to be performed immediately upon sampling: pH, sulfite, chlorine residual, dissolved oxygen, filtration for ortho phosphorus, and ferrous iron. The date and time reported reflect the time the samples were analyzed at the laboratory.

MBAS, calculated as LAS, mol wt 348

If the solid sample weight for VOC analysis does not fall within the 3.5-6.5 gram range, the results are considered estimated values.

Samples collected by Fairway Laboratories' personnel are done so in accordance with Standard Operating Procedures established by Fairway Laboratories.

* P indicates analysis performed by Fairway Laboratories, Inc. at the Pennsdale location. This location is PaDEP Chapter 252 certified.

< Represents "less than" - indicates that the result was less than the reporting limit.

MDL Method Detection Limit - is the lowest or minimum level that provides 99% confidence level that the analyte is detected. Any reported result values that are less than the RL are considered estimated values.

RL Reporting Limit - is the lowest or minimum level at which the analyte can be quantified.

[CALC] Indicates a calculated result. Calculations use results from other analyses performed under accredited methods.
